Steve,
Here's my opinion (for what it's worth).
Henry amplifiers are over rated for what they are. You
almost always 'pay' for the name than I would care to do.
Nothing wrong with the amplifier, just over priced, in
my opinion.
There is one thing you always have to remember about
a HeathKit amplifier. Somebody who may never have known
how to solder put the thing together. With that in mind,
the SB-220 is a pretty good 'medium' power amplifier.
There are a lot of them, and they've been around for a long
time. There are a number of mods for them that do work,
and do improve the amplifier. A very good SB-220, in very
good 'cosmetic' and electrical condition, might be worth
$500.00. But not much more than that.
Another one of those 'for what it's worth' things about
the SB-220. Unless you rebuild the power supply section, you
will never get more than about 1200 watts out of one. The
power supply section just will not provide enough VA to do it.
Re-transformer'ing with an out-board transformer, substituting
larger capacitors, and re-doing the rectifier board, can
make an SB-220 into a real 'honker'(3000watts+). But thats
not something you want to try if you've never built an
amplifier or two.
Not much help with your choice, but might be......

Just to see if we could doit some buds and I made our own hard line out of 1/2 inch copper pipe. We strung plugs of Teflon rod onthe center wire and puled it through the pipe. Connectors on the end was made by turning down a barrel connector and sliding it in the end of the pipe. The center wire connected to the barrel connector by soldering a bananna plug to the center wire on the bottom end. on the top end the wire had to be soldered to the barrel connector to keepit from pulling out. We made about 100 ft of this.

Compaq, I realise that your goal at this moment is to only talk to your wife a couple of miles away, but you may eventually want to talk further than that (to new friends you meet on the radio, for example).

Therefore, if I were in your situation, and if I had a choice as to where to cut costs, I would get a better antenna and lower quality coax. A better antenna would give you "more bang for the buck" than better coax would. In other words, think seriously about buying that $50 antenna and using less expensive RG-58 coax instead of the more expensive RG-8.

Of course, a good antenna and good coax is always the ideal. But that ideal is obviously more expensive.

Dwight Stewart (W5NET)

2074. RCI 2980 mods ??

Hello David: The manual has not photos, but does have a schematic. I have repaired these type of radios, and yes the Tune & Load are on the right hand side. I believe you need a screw driver to adjust the load, and the Tune a has a knob?

There is a resistor network, (a bunch of resistors in series) that make up a voltage divider, that seems to always change value over time in the receiver. And I would replace them with 2 watt carbon resistors.

LOL!.......You'd be surprised Doc. Last week I had some guys call me to see if I knew how to support the wieght of large diameter cable when connected to a wire dipole......(scatching my head).

I use a 200'+ run of 1-5/8" Heliax to my antenna systems however I also use an electronic switch that routes the main cable to various antennas, which includes a VHF/UHF array (as you know, this is where the benefits of hardline really shine). Theres no arguing that if one were to go out and buy Heliax brand new ($7.00/ft) and use it strictly for HF, it would would be over-kill. However, if one could get the cable and connectors for the right price, and one didnt mind wrestling around in their front yard with an Anaconda for a couple of days, it does have it's benefits. One of the nicest by-products of my Heliax installation was the near disappearance of TVI after installation. This was an unexpected benny.........

I have the 99V and it works great. Like anything else, don't mount the radio where it will be subject to shock or strong vibration. They look pretty strong inside and should run for years if taken care of and not over tweaked and tuned as some people like to do. You get 30 watts ssb and that should get it done. We find that terrain is the obstacle and no power increase will help that. A good 3/8 wave antenna like the thunderstick works about as good as you can get. The roger beep is nice for ssb only and I don't use the other voice options as they are unnecessary for my radio use which is mostly mobile in the mountains and for base camp use.
I use it as base too and it is stable and good sounding with sensitivity and adjacent channel rejection comparable to my Sonar FS-23 which is an outstanding transceiver for it's day. On home base the audio is with a Turner +2 and I can talk 20 miles on 1 watt and do it often and the other end hears me fine if the channel is clear. Good clean audio is just as important as watts.

Thanks for the reply Bill. I demanded (sort of a harsh word maybe insisted is a better way of saying it) that the amp be CLEAN!! Not thinking about the on-board cinouter in the truck, but what good is power if you cannot understand what is being said!!! The jumper cable idea is VERY good. I have a set of heavy-duty (#4) cables and just might do that.

73's

Didn't read no book,got it off my map which has about 20 years of contacts marked on it. I can talk about 50 miles base to base pretty reliably with anyone else with a decent set up. After that it is about 300miles before I start making skip contacts,Its even betterby 500. AlI i was saying is that this particlar antenna with its very high angle of radiation might fill in this area tatis between line of sight and skip. Might be fun to try, but otherwise the antenna is going to suck.

Without skip you are only going to talk as far as the radio horizon which depends mostly on terrain and antenna hight. Probably about 50 miles.You can do this with 4 watts and beams on a 100 foot tower. After this the power is leaving the ground and going out into space and unless there is someone up there to hear it thats about as far as you go regardless of power. There are certain conditions that cause this powr to be reflected back to earth. Where it comes back down is dtermined by the highth that it gets reflected from and the vertical angle of radiation of the antenna. This is not to say that you can not talk further by increasing your power. Some signal will go beyond the horizon and the more watts you put out the more that will go. Within your horizon you have to square the power to double the distance.Think of it more as how much area you have to cover than how far it will go.

Hey guys, just got my DF in. It is a beautiful radio. The power is just outstanding. On am, it does 40W, and SSB 65W. The Turbo Echo Board is way cool, all the little gadgets that it has is awesome. It will take a little remembering on how to operate it. The rx is noisy. I have ANL and NB on and I still get static up the butt. Oh yeah, for the CH. conversion:
hold the function button in, and push the call button. The radio will get 25.165-29.655MHZ. Yep, that's it.

Source record: 31552

To have a radio tweaked and tuned means to have the power tuned up to maximum wattage and tweaked is upping the modulation. Some of the old radios came doing 4Watts and 60-70% mod.Tuned and Tweaked would sometimes see 20-30Watts and well over 100% mod. Yes this is illegal, because the FCC says that you have to run a cb a the legal 4Watts. Also, if you buy a brand new radio and modify it, it will void the warranty, but screw all of that. Go ahead and get it modified. You'll love it. I have a Cobra 29GTL that dead keys 2Watts and swings up to 25Watts with 130% mod. I nicknamed it the "sreamin' demon".

I love my 2510 and have owned both radios. The 2950 is all right, but I can get more and cleaner power out of my 2510, and the adjacent channel rejection is phenomenal. I also think it is a little easier to use and with a chipswitch, a far more impressive machine.

keith, the noise you are experiencing is coming from the electric fuel pump. I had a nissan pick-up with the identical problem. the nissan trucks have a plastic fuel tank with the pump inside so its difficult to cut the noise source there. I tried to get nissan to help remedy the noise. they told me short of pulling the tank and putting an all metal one in its place, it would be virtually impossible to cure. MK has a very good suggestion in putting the + directly to the battery and the negative to the frame.I also tried the noise eliminator, this little gadget goes inline with the coax.seem to work like a noise blanker. It did cut the noise but it also killed my receive too. Hey, maybe some lead based paint on the fuel tank would work..... It might be tough to find though. I tried to keep my antenna as far from the pump as possible. seemed to help the most.

Chris,
Comparing the 4 basic 'types' of antennas;
1.non-loaded 1/4.
2.top loaded.
3.center loaded.
4.base loaded.
The above are ranked in order of efficiency. A non-loaded 1/4 wave antenna is most efficient ('best'), next the top-loaded antenna, etc. So, a center loaded antenna is more efficient than a base loaded antenna.
That should answer your question. Comparing a K-40 with a Wilson, is a different story, and I ain't putting 'my dog' in that fight.
'Doc

Jason,
Using your comparison, big meters vs. SSB. Which
do you 'need' the most. If your 'eyes' aren't the
best in the world, and if you really think you need
to know the information the meters give you, then get
the 'big-meter' radio.
If your like most people, after several readings
of the meters, you probably don't use them very much.
If you think you would 'need' or enjoy SSB, (which is
more efficient than AM anyway), I think you'd be happier
with the 'SSB' radio.

Hamm4fun,
Wouldn't even begin to predict range since I'd really
have no idea of what propagation is like. But, as he said
in the original post, if a tuner is used, and if his 'type'
of antenna feed is done correctly, it ought to work fairly
well. By the way, this kind of antenna has a very 'low'
angle of radiation.

Source record: 31570

"R.P.",
It depends on what you mean by 'tweaked & tuned'.
Most manufaturers don't take the time to individually
adjust each radio to the best performance possible,
they are usually 'tuned' to a 'best' general setting.
Also... Usually, your not going to be able to 'see',
or 'hear' any difference. Your also relying on your
technician who may, or may not know what he's doing.
So far, your still legal. But, if by 'tweaked &
tuned' you mean turning up the modulation, or power
output, thats a different story. You would probably
be in the 'illegal' area. Your still at the mercy
of your technician, does he 'really' know what he's
doing? What does 'HE' consider an 'acceptible' level
of modulation, distortion, etc.? Very basically,
which would you rather have, a weak but nice sounding
signal, or a slightly louder, distorted, 'crappy'
sounding signal?? (You can probably tell what I
think of most 'CB' technicians.)

>hundred feet. One cable has 6 times greater attenuation than the
>other........hello.............What is so difficult about
>interpreting this?

There is nothing difficult about it, a change of 1.11 dB is NOT 6 times greater attenuation, PERIOD.
I gave you the chance to prove you knew what you were talking about, guess I wll just have to the
math for you?

dB=10 log (p1/p2)

And from your data sheets on coax, 9913 has 1.11 dB of attenuation when compared to hardline.
Lets substitute the values:

1.11 dB=10 log (X/1)

Solve for X, we get

1.11 dB=10 log (1.29/1)

So now your six times greater attentuation is now 1.29

and to make it easier for you, if you sent 1.29 watts of RF down a 100 foot length of hardline you
would see 1.29 watts at the other end.

if you sent 1.29 watts of RF down a 100 foot run of 9913 you would see 1 Watt at tthe other end.

Where is you magic six times? Do the math, correctly this time.

----------snip

They rest of your double talk clipped do to non relevence to the original questions about 1.11 dB = 6
times the loss

dont know what to tell ya amps x volts = watts and 1 watt = .001341Hp that is a fact so 60 amps at 18 volts is 1.44 Hp you can't dispute that it is a proven law.
I am not sure of the effiency of the alternators on the market so if you assume 50% that only goes up to 2.89Hp

The new Family Radio Service (FRS) radios are ideal for what you describe. Very compact, range up to a mile or so, clear reception using FM, no license required, and inexpensive. Some are also weather resistant. Available almost anywhere that sells electronic equipment.

In a previous article, <beedman007@aol.com> writes:
>3 years ago i bout 49mhz radios and not wanting to pay more for new hunting
>radios is there anything i can replace in the 49mhz radios to make them go

I'm not Jerry, but I can tell you from experience that
these portions of the spectrum ARE used, or at least WOULD
be used if the 'freebanders' weren't making such a mess.

Ben,
Wanna know why more hams get 'busted' than CB'ers?
Because the FCC 'gave up' on CB'ers a long time ago.
Except when a CB'er just really gets 'obnoxious', there
are just too many of them to police with the manpower
they have available. You'll notice that they ARE getting
a few of the 'leenyar' manufacturers and dealers lately.
Smaller group....

No Chucklehead;
That was not the original question,
It was how can you say that you have 6 times the
attenuation with a dB change of 1,11 dB.
You think you have the answer? Post it!!! You better
go back to the ARRL handbook and tell the group how a 1.11
dB change equates into a 6 times change.

Post your magic formula that proves that CHUCKLEHEAD!!!!

post it or shut up chucklehead!!!!

Apparently you dont know what your talking about
guess the kid is a kid after all..

Absolutely Doc, freebanders break the law. The post has turned somewhat from the original subject(what's new?). Several posts are comparing apples and oranges. No disagreement from me on freebanders being aware of breaking the law. I question the merit of the law.

(Sigh) The comparisons are noted, but they don't apply. Analogies exist for both sides of the debate......Your daughters cat is stuck on the roof, you have no ladder but your neighbor does and you borrow it for a few minutes and return it. No one is the wiser and noone gets hurt right? Are you a criminal 'cause you just broke the law? Ludicrous. As I said, you can apply comparisons to each side and this can go on and on...but Doc gives the best argument.

AHH, I couldnt resist! So, all that you've proven hear Mr.
Rocket Scientist is that one would realize a 22%loss when using
9913 as compared to Heliax.

1.29 watts x .22 = 1 These are your numbers arent they?

For this I thank you because you've substantiated my entire
point for using hardline. First off you attempted to use the
wrong formula and secondly you are still trying to calculate dB
mutiplication factors which dont exist....get over it man.

I have the Galaxy 73V with all the extras. I really like the radio but one thing I really miss is the SSB I like the freq counter so I know what channels to stay off of. I mostly enjoy listning to the conversations on all those extra channels. Unfortunely most of the trafic is SSB so the radio does not do me much good. But due to the price Im not going to throw it away just to get one with SSB. If I knew what I know now I would have waited untill I found one with SSB. But for me it was not a total loss because I still get some enjoyment out of it. Hope the Info helps.

I feel that If I can't speed 5 miles over the speed limit then the police or anybody else has the right neither. Who are they to say how well I can drive a car. I see people out their that can't drive a car 15 miles under the speed limit. And what about all those accident cops cause because they were speeding. The same applies to CB also. I dont run any power over what the radio can put out from the factory. But I dont understand is, If a ham is running 100 watts then I am not causing any more damage then what he is If my radio is the same as his just on 27 Mhz. But I also know that depends on location too. I will admit that I do have alot to learn and someone will probably help me understand a little better If Im wrong by replying to this message. Then again thats the idea of this post.

One argument that could be raised regarding the "if it doesn't hurt anyone" issue and the legality of big power, is that citizens band was never intended to be for DX. It turned out, however, that 11 meter radio waves worked great for skipping off the atmosphere. Sort of like finding a nice smooth stone to skip across the river... But I digress. The difference between a ham running 100 watts and a CBer running 100 watts on 27 Mhz is that the ham is probably doing it legally... and he's probably not playing music, whistling, or droning the word "Audio" over & over. So the "harm" could simply be a matter of whether it's legal coupled with how annoying the individual is to others on the air.

Accidents caused by speeding law enforcement vehicles are rare, compared to how many are caused by negligent common citizens. Usually, when a law enforcement vehicle (or any emergency vehicle) is involved in an accident, it's because some moron didn't get out of their way like they should have. I've seen people on the phone, yacking away, never realizing that fire engine or ambulance is coming up right behind them.

over>>

Very few are, except for the 3 or 4 "problem frequencies" (that I'm sure
somebody'll probably point out ta ya, like it's some kinda
conversation-stopper) that get nutty at specific times of day and week .

Me I don't unnerstand why CBers say they hate hams - then they go outta their
way to imitate them.

Like using Q-signals and saying "73"....terms originated for use on morse code.
Or checking a rig by saying "audio". Or calling CQ DX. Or printing QSL cards.
Or using number/state/country callsigns.

?

While it may SEEM so, it isn't necessarily so. Sunday, I had a nice chat with a fellow in Switzerland running 40 watts on 10 meters. I have had QSOs with people in other parts of Europe with less power than that. When you come right down to it, that "mo watts" stuff is purely psyco-logical: I am bigger than you, I am King of the Hill, I can get out bet-ter than you 'cause I got a bigger linear than you. Since lots of folks equate more-more-more with a bigger signal, the same people turn up their mike gain looking for that "swing" stuff which might look good on the RF meter, but sounds TERRIBLE on the other end. They'd be better off to leave the "swing" to the Glenn Miller Orchestra. LOL! Nothing is made to run wide open all the time.

Respectfully

Jerry

Press MAN button twice to reset to a known mode.

You need to hit PROG then MEM. Pressing MEM will advance thru memories.
Use SHIFT and arrows to set, then ENTER. These are the freqs scanned
in SCAN mode. Don't set more then you need to, it will take longer to
scan.

(these directions are for the old version of a 2950)

Peaking and tuning is a money making scam created by screwdriver experts to take your money.
And yes it is illegal. Most on this NG have dillusioned themselves into believing otherwise, but it is illegal, and there is no real performance benefit. Doubt me? Ask your "tech" to do it for free, and then tell him you'll pay for the service only if you feel it was worth it. He'll refuse. It's a scam. Just like those Televangelist faith healers. You won't notice the difference between 80 percent and 100 percent modualtion, nor will you ever notice the difference going from 3.5 watts to 5 watts. Even doubling power is nearly imperceptable. Save your money. Enjoy your radio, and forget the snake oil peddlers who hang out here.

The house is empty. No one has been home for a long time. And if someone one does come home, they should be aware of the many stray bullets whizzing by. In essence, Freebanders have taken over what has been abandon, and utilizes it in the most natural of ways. What else needs to be said?

Even a Ham can not run 100 watts at 27Mhz.

>nd he's
>probably not playing music, whistling, or droning the word "Audio" over
>& over.

Being a Ham does not automatically turn you into a good law abiding citizen.
More Hams get busted than CB'ers on the average. Kind of ironic, they come here
to preach the gospel of all the mighty radio gods "FCC, ARRL,".

> in the most natural of ways. What else needs to be said?

What needs to be said is that the so-called "freeband" is NOT abandoned. Just because you don't hear anybody doesn't mean that it is not used. Where CBers chatter with each other (endlesly?), these are business and military frequencies (below channel 1)and whatever traffic is passed is short and to the point. It may also be digital/data. And it doesn't matter whether they are being used or not. They are assigned to people for their use and convenience. Like a person's ownership of a piece of land: you may not visit that piece of land every day, BUT if you decide to go fishing on the lake on your land and discover that you can't even get TO your own lake for all the trespassers who are fishing in YOUR lake, I just betcha you'll get busy running all those uninvited "guests" off your property--or swearing out warrants for them. That's how those agencies feel when they DO attempt to use THEIR rightfully assigned frequencies and discover there are "trespassers" there. There has been much hell raised with Congress and FCC about this in the last couple years. Lots of that spectrum isn't controlled by FCC, but by NTIA, the government's "in-house" regulatory agency for Federal Agencies and the military. They are cracking down on this, believe it or not. If one continues operating outside the 40 channels and using big power, etc., they will notice sooner or later. Laugh if you like, or flame me (which doesn't hurt me at all), but it will cost eventually. Denial won't mitigate the fine if you are caught.

Respectfully,

Jerry

John Doe, I was replying to the poster that analogized freebanding with criminal activity and was attempting to point out that kind of logic is ridiculous. The freebanders I was referring to were not running power and heard nothing other than radio ops. on freq. There are lousy ops everywhere(all modes). I here ops breaking the law up and down ALL bands, but most of the freebanders I hear are doing nothing INTENTIONALLY to aggravate, agitate, key or jam any other ops., and if they realize the opposite is true, immediately take steps to remedy situation.

This is not true. there is a difference between a clipped and a
non-clipped, especially in a uniden radio, where they really crank
down the audio well below 80%.

>will you ever notice the difference going from 3.5 watts to 5 watts. Even

this part I agree with.

My advice, clip the audio, set the deadkey to 4 1/2 and leave it
alone. might wanna add a Astatic Power Mic.

>for their use and convenience

Hi Jerry
Please educate me. What military or buiseness would use frequencies as unreliable and unpredictable as those in question. Then add all the noise and chatter from the Freebanders. I just don't buy it.

Please understand that I don't question the frequencie allocation.

Now, for your comparison to land ownership. It is not private property. It is public domain that has been allocated . A allocation that may be taken away, or given, as the powers that be, desire.
I truely believe, if people like you weren't out there makeing noise, no one would care. And it would be possible to reallocate to be used in the most natural of ways.

Where did you get the idea that those frequencies were abandoned? They are still in use. Just because you do not happen to hear a signal on a particular frequency dose not mean it isn't allocated and is yours for the taking. This is like seeing a piece of land and you don't see someone's house on it so you just assume it's OK for you to build your house there. These frequencies are allocated to licensed users and even if they never use them it still is not yours for the taking. I hear this same stupid response from idiot cbers who wander up into the 10 meter band. They think as long as they aren't bothering anyone then what does it matter. It matters because they are not licenses to operate there because those frequencies are allocated to the amateur radio service and requires an amateur radio operator license to transmit on those frequencies. Is that a concept that is just beyond the average cber to understand?

Landshark,
Nope, absolutely incorrect. No city, county, or
state court has any jurisdiction in RFI cases. See
Public Law 97-259. All cases dealing with RFI are
preempted by the Federal government.
The FCC also sets out specific guidelines as to what
is required by the transmitter operator, and the person
who's equipment is being interfered with. If you, as
the transmitter operator have followed these guidelines
and have made a reasonable effort to eliminate sources
of spurious/harminc radiation from your transmitter, you
are not required to do anything further.
Any Part 15 device (TV's, VCR's, Baby-monitors, cordless
phones, etc.) must accept any interference it may receive,
and may not cause interference to any licensed service.
Pick up your cordless phone, turn it over, read the tag.
TV's and VCR's are not required to have this notice, but
they are still part 15 devices.
If your friend 'lost' his case in small claims court,
tell him to find an attorney licensed to practice in a
federal court. Then tell him that a local court made
a ruling against him(your friend), ignoring a federal
preemption. Your friend might be suprised at how much
he may be able to 'claim' and win!
Been there, done that, in a city court and a state court.
Ready to get a new 'T'-shirt any time!
Oh, by the way, this only holds true for licensed services!
CB radio is NOT a licensed service.

Martin,
Correct until you included CB radio as a licensed service, it is not. You are not required to have a license for CB operations. Not my opinion, but the legal department of the FCC.

Landshark,
All your friend would have had to do was stand up and
tell the judge that his court had no jurisdiction on
matters pertaining to RFI because of PL 97-259, other wise
known as the 'Goldwater Bill'. Show the judge a copy of
his license, and that would have been it. The Judge would
have had to throw it out. Don't take my word for it, ask
an attorney.

David,
Very well put! I just wish people would pay attention.
I've learned the hard way to not discuss any RFI complaints
until the people complaining have read the free booklet
from the FCC about RFI. If they can't/won't write and ask
for the booklet, I have copies that I give to them. Only
after they know what they are responsible for, and what I
am responsible for, will I discuss anything with them. After
going to court twice, having to get a restraining order and
a protective order for the same person, wasting I have no idea
how much time looking up the applicable laws, and remaining
off the air (voluntarily) for a month, I just don't have any
patience with RFI complaints.

Ben,
The 'empty' house analogy doesn't apply. The area your
speaking of, 27.405 to 27.999, is not empty. Just for one,
the Navy has several frequencies in that range. Of course
they are not used very often, because they can't, to many
'freebanders'!. The frequencies I'm talking about are not
'tactical' or 'strategic' frequencies, but are used for
MARS communications (family, friends,etc. of servicmen).
Theres been lots of 'calls home' missed because of the
'freebanders'.

Hey Chucklehead apparently you dont know what your talking about either because you used the wrong formula. You better go back to your ARRL Handbook because the formula u used was to calculate cable db differences in percentage not the difference in db multiplcation. Your numbers are correct if a person wanted to calculate the percentage differnce between one coax and another. How come you didnt answer his comments about SWR loss which I believe was the original reason for this thread?

> I gave you the chance to prove you knew what you were talking about, guess I wll just have to the

So, if you don't hear constant chatter on a frequency, you presume that is is 'abandoned' and then proceed to use the frequency? So, you awake one day and find a strange car parked in front of your house. It remains there for many hours and into the evening, at which time you deduce it is abandoned, hot wire it and proceed to use it. Unknown to you, the car belongs to the neighbor's visiting in-laws. Heck, it wasn't being used. It was licensed to someone else but you didn't see any activity. Might as well use it, right??

I have a Wilson 1000 in a roof mount and the silver plated coil is what sells me. The 27 Mhz finds less resistance in silver than in copper.
Silver is a great conductor, and 27 Mhz travels along the outside of the coil wire.

Drive a little ways north (up I-15) to Ontario. Right by the
TA truck stop there is a tech named Bill Good. He will make
that radio SCREAM correctly! Nobody is as good as Bill Good.

Dino

2235. Antenna Tuner Help

Newsgroup: rec.radio.cb
Date: 2000-04-19 00:00:00 UTC
From: Frizz <senorpurpl@hotmail.net>
Message-ID: <8djcj9$2ku$1@bob.news.rcn.net>
Source record: 31635

I just bought a Ventronics VC300DLP antenna tuner but am kinda wondering if I am using it right. When I tune the one antenna I have outside, I get a humming noise coming through the radio, almost like there is a bad connection in the mike cable. The antenna is, however, mounted three feet from my station on the window sill and before I scrap this and put up a large dipole to be tuned with the tuner I want to know if this thing works. Also, I am kinda clueless as to how one reads the scale on this thing. It is a dual movement meter with one side saying Forward and the other saying Reflected. Below reflected is an SWR scale that moves simultaneously with the Reflected scale. I am guessing the forward power is how many watts the radio is putting out and it has been so long since I read about these things that I am now lost. Any help is appreciated. Thanks guys!!!

Doc,

I have to agree on and reinforce the importance of going in prepared. You can give up the farm without need due to not understanding the law and requirements. I think that even TVs are now treated as part 15 devices. If I remember, it was a new ruling, and the ARRL included info about it when I sent for the RFI package over my dispute in 1993. However, I may be incorrect in my memory.

Good Ole' AUH2O... Good to have a ham on our side, Still can't decide why Gore has given us favorable treatment. Kinda like gettin' kissed by someone with bad breath. It would be nice to get a list of celebrities with ham tickets posted.. I have worked a few myself. On 2m SSB, I talked with a Ham from Jax Florida for a long time before realizing he was the Bass player from 38 Special.....

I personaly have nothing against ham operators. I do have a few stong feeling against law makers. I think if you are using a linear and not doing any of the below then it should be ok. But if you are causing problems just to be a jurk then you need to have the book thrown at you. The law or some other people dont see it that way. They say thats the law and if you dont like it tough. Their is no exceptions for you, just for us. I see cops every day speeding to get to 7-11 for somthing to eat or drink. On the way to 7-11 I have seen them flick on their lights just so they did not have to stop at the red light. After they have gone through they turn the lights back off. I know because I followed them inside when I got me a drink. After the light turned green of course.

I see you moved my wording around. You are right about a ham not aloud to
run 100 watts on 27 MHZ My point is if they can run 100 watts on their band
then CB should be able to run them on CB band.

2246. Zachary T..NO TRANSMIT, NO RECEIVE.. HELP PLEASE!

Newsgroup: rec.radio.cb
Date: 2000-04-19 00:00:00 UTC
From: homer <Homersplace@angelfire.com>
Message-ID: <38FD620F.9E54D257@angelfire.com>
Source record: 31646

I have an old Zachary T (858 pll chassis) that won't transmit or receive. It has new finals, and seems to have voltage present at the finals when keyed. The meter does NOT move at all when keyed or receiving.

The transmit light DOES come on when keyed, and the PA system works. I have an identical working radio that I have been cross-checking with. The voltages around the PLL seem to be fine.

I have SAMS for this rig, but I lack the equipment for a proper diagnosis.

Does anyone have knowledge of this radio and this problem? I hate to take it to the shop only to find it's one of those pesky diodes or caps burned somewhere.

Any techs out here?

Thanks in advance,

Homer

LMR400 seems to be the hot stuff from a nation wide point of view.
It offers specs similar to 9913 with less center conductor
migration and better durability. In other words, it has the
durability of 213 and the power handling and loss specs of 9913.

> Who really cares??? buy what you like!!!
>
> 937 chicago.....

I just bought an X-Force XT-400 for a customer.
It was a special order. This is the second XT-400
that I've ordered for customers. This one was of
poorer quality than the first one. The first one
had adequate DC cables, small rubber feet to keep
the screws on the bottom from scratching things,
no dents in the cover where the fan is mounted,
and no packing "peanuts" inside the unit upon
arrival. The one I just received was just the
opposite. It had two, 10 guage, red, positive
leads, but only one negative lead. That resulted
in 100 fewer watts of output under the exact same
test conditions. The first one did 1000 watts
under the test conditions I provided. The latest
one produced 900. The lack of rubber feet, the
dents in the cover, and the peanuts inside didn't
effect the performance, but were annoying just the
same. X-Force amps are definitely not low-cost
amps, but in my opinion they are starting to employ
the same cost-cutting tricks that the low-cost amp
manufacturers employ. I used to be a big X-Force
fan, but the amp I received 2 days ago was a let-
down. Today, I honestly have to say that Dave-Made
may be the better way to go. I believe the actual
X-Force builders have already started to become
complacent. I'm willing to name names too. The
X-Force amp I received had markings in it that said
it was built by someone who goes by "White Cloud" or
"827." Whoever he is, he definitely didn't have his
heart in it when he built the amp that I received.

All I can say is that the next time I need a 2 driving
4 amp I'll probably order a Dave-Made to see how they
treat me and how their finished product stacks up.
Right now, in my opinion, the best blend of looks,
features, and performance in a 3-pill is probably had
by buying a Pirate amp. Steve at Pirate never overlooks
the little things. Pirate amps always look good when
brand new. They are wrapped in cling film (Saran Wrap)
to keep the packing peanuts out. They are nicely painted.
They always have rubber feet. They always have proper
DC cabling. They always have more features than the
"comp" amps. They always cost less than the "comp" amps.
I'll probably get beat up for this, but right now I
recommend that you (the original author) buy a Pirate
1 driving 2 amp.

Thanks for your time.

> THINK IS WORTH THE MONEY?

The highest (generally available) performance amps
are made by X-Force and Dave-Made.

I just went through a period where I was a big
X-Force fan. That's mostly because I knew Dennis
(#12) was helping them. Dennis is so worth listening
to that anything he's involved with is worth backing.
Now, I just received an X-Force amp that was a
disappointment. What should I do? I've reconsidered
my position. Even Dennis admits that Dave at Dave-Made
is every bit as good at RF design as Dennis is--maybe
even better. Perhaps Dave-Made trully is the more
consistent high-performance amp builder in the long run.

In my opinion, the best custom amp overall is Pirate.
Steve at Pirate has never shown signs of complacency
and has never short-changed a customer. His amps
aren't the best performers (in my opinion) but they
are the best overall value.

Im sorry. I made a mistake.

1.29 watts - 22% = 1

This is your percenatge loss using 9913 compared to Heliax.

73

2253. Re: Antenna Tuner Help

Newsgroup: rec.radio.cb
Date: 2000-04-19 00:00:00 UTC
From: Gary Danaher <gdanaher@home.com>
Message-ID: <38FD9D4F.93D84E7D@home.com>
Source record: 31653

Why would you ever need an antenna tuner for CB? If you are hearing a hum on your received audio, it has nothing to do with the tuner. It is inert on receive if tuned close to properly, but you use a tuner if the antenna isn't resonant at the transmission point, and since CB is so narrow anyway, why bother? Tune the antenna. Don't use another device to trick the radio.

Hmmmmm, you comment seems a little vague. Do you mean that
the counter just sticks up any old number?. Since a CB has
no VFO how do you know you are on frequency in both TX and
RX? I an curious, could you elaborate further?
Cheers,
John

I suggest you rephrase the line with CBers. I have ham
friends who have went out of there way to help me start up
on CB years ago and pit up a CB tower. I have been to many
of their meetings.

You are really only referring to a small minority group who
is more interested in annoying some people than real radio
TX and RX Radio.

Message-ID: <38FD9A61.547E008F@island.net>
Source record: 31658

It depends what definition you put on "Tweaked & Tuned". I
think of the radio being set more accurately on speck. In
the factory the pall park setting is quite big. I have two
Cobra 148 GTL's one peeked and tuned the other just off the
shelf. There are non modified for frequency etc. and the
peeked and tunes one is far better in TX and RX.

Cutting the clarifyer, adding frequencies and boosting power
and modulation to over 100% is a modification.
Cheers,
John

From: trout <trout1000@squonk.net>
Message-ID: <tvlrfs0jt215e1linok115kjtlfqf1s8up@4ax.com>
Source record: 31661

I need advice:

I'm going to get the Texas Star 250 HDV
linear amp, but need to know if the
Galaxy Turbo would be a good choice for
a 10 meter base radio.

I want a decent match between the amp and
the base radio.

Are any mods needed for max
send / receive ??

Responses via email appreciated.

I could recommend $100 radios out the wazoo, but everyone's got a different opinion... Cobra's good. I have a $50 19 Ultra in the truck that does the job locally. I just need a better antenna, since that's practically half the radio, so to speak. And you'd also be surprised at what you'll find in the pawn shops.

Websites... I have a CB page on my site, and on it are a few links to others. There's even a webring w/ tons more sites. For now, here's mine:

Yes you did make a mistake. that there was a 6 times
change. Use the numbers and prove it. I haven't seen
anything you have posted to substantiate a 6 times change,
other than divide 1 dB level by another. and that a
invalid way of calculating it. 1.29 watts in, .215 watts
out, thats a 6 time change. Post your proof. Why can't
you answer this? All you do is try to double talk your way
around it.

2270. Re: Antenna Tuner Help

Newsgroup: rec.radio.cb
Date: 2000-04-19 00:00:00 UTC
From: secopsys@aol.com
Message-ID: <20000419110119.15251.00002104@ng-co1.aol.com>
Source record: 31670

If you must use the tuner, tune for lowest reading on Reflected meter. Where the two meter indicators cross is SWR as read on the scale at bottom.
As for the hum in receiver: Sounds like you are getting RF in the shack. May be that the antenna is just too close for comfort, or maybe you have a bad connection of shield to the coax connectors or to the antenna or radio. Check these connections carefully first. You may find one of the shield connections is bad. To check integrity of the coax cable you could try the following: With the coax disconnected from the radio, and disconnected from the antenna, check with an ohm meter that there is no short between the shield and the center conductor. Then short one end of the coax center conductor to shield, the other end should now show shorted (near zero ohms). Maybe bad connection is why you need the tuner in the first place..what is your antenna? If connections seem good, try to disconnect as many leads as possible going to the radio. Sometimes a speaker lead, mike cord, etc. acts as an antenna and picks up your transmitted signal, and feeds RF into the radio. If you can isolated one lead attached to radio that is the culprit, you can try to wrap that lead around what is called "split ferrite beads". Also, you might try to make a coil of coax about 6" in diameter, maybe 8 turns just before it gets attached to the antenna. This will "choke" the RF from coming back into the shack on the shield of the coax. If the antenna is too close to the shack, the problem will lessen as you lessen the power output of your radio also. Hope this helps.

More typical CB mentality. Gee, I know broadcast stations that run 100 KW, so if they can run that much power then hams and everyone should be able to run 100 KW too, right? The power limits for cb were set for a reason. The cb service was orginally set up to be an economical, low-power, local communications, business type band, not the radio sewer pit that hobby cbers have turned it into.

Back in 1986-88, when I had my modified Cobra 2000 w/ "extra" channels & the big antenna on the roof (I was only 14 & didn't know any better!), I heard nothing on those freqs but others like me... AM, upper & lower sideband, DXing across the country. Never heard anything remotely related to gov't or military use. So, maybe they haven't been in use by the people licensed to use them for years & years. That still doesn't make it legal. Laws could be changed and freqs could be reallocated to accommodate what's already going on, (like what happens w/ the speed limits), but where then would the line be drawn. For example, "Well, lots of people are looting after earthquakes & tornados; might as well make it legal." That's a stretch, I know. But while allocating these freqs for legal public use would do very little harm (if any) to society and mankind in general, it's still illegal right now.

And to the individual who routinely and knowingly breaks the law without fear of being caught, there's a quote posted in the place where I work which says, "Integrity is doing the right thing when no one else is watching."

Sorta how a college graduate feels when he notices that a friend who
never went to college has a great job, and is making just as much money.

If I had thrown a ton of cash into a ham radio and a bunch of time into
learning morse code, and then found out that people were having just as
much fun on something that was so inexpensive, I'd be angry.

Dave!!!!

Bendthelite@webtv.net wrote in message <23427-38FBD23E-50@storefull-116.iap.bryant.webtv.net>...
Get a Ranger RCI 2950...or President Lincoln. These are 10 meter radios that can be re-enabled to operate on 11 meters. They are all mode, AM, FM, USB & LSB as well as CW (morse code). Each has 10 watts on AM & FM and 25 watts on SSB running maximum power. Power is varible...and the units can scan channels as well.

Yeah, what he said :-)

If you plan to buy radios at pawn shops, my advice is to install a complete mobile testing center in your vehicle (check for power output, modulation, frequency stability, etc.) Most pawn shops will allow you to take the radio out and test it if you leave some form of security with the clerk.

2280. Apology from 55

Several people have complained about antennas purchased at the North Carolina break. They were under the impression that the antennas they were buying were "55" antennas. From the customers description, (plumbing fittings at the end and no serial numbers) I determined that the product was some of the copys that are out there.
If anyone has a complaint about a "55" antenna that they purchased in N.C., and it is authentic, I will give a 100% refund or replace the antenna.
I'm sorry if I was a little short with anyone on the phone. See you in Augusta this week end. Fifty Five

Always ask if the equipment is returnable. I found a 510XL w/ antenna
for my girlfriend's car price at $28, and I asked the guy if I could
return it if it didn't work. He said, "Yes, with the receipt." I paid
the man, went to the parking lot, hooked it up, got a radio check, and
drove off. The thing works fine... but the squelch isn't as stable as w/
my Cobras.

If they wouldn't be willing to take it back, don't buy it. That's why
people shop @ places like Walmart & Target, because they know they know
merchandise can be returned on a whim.

Sorry little boy, but cb in no way competes with ham radio. As far as new comers go, sure, the only thing you have to do to get on cb is buy a radio, nothing else required, any idiot can do it, not much accomplishment there. As far as fun with 50 dollar radios, I have had more fun on the ham bands, legally, with radios that I constructed myself for less than 50 dollars using surplus parts and parts scrounge from old TV's and such. Can you say that? And the antenna I am currently using cost maybe a whole $10. Face it, cbers have turned 11 meters into a radio sewer pit. My comments about what the cb service was intended to be is correct. To say tha cb competes with ham radio is a really stupid statement, but then what else would I expect from the cb mentality.
Now run back to your mommy and tell he that mean old so-and-so is saying bad things about your radio.

Hello,
I would tend to leave the Turbo barefoot, because the unit itself will do a great job with out all the extra trouble making power.
If you decide to run the amp, do a few test of your own with long distance checks and you will see that the amp will not be needed. Hope this helps you...

Please run a damn spellchecker or learn how to use the damn spacebar.
Geesh..you have the worst most lazy typing style I have ever seen. But...I do
agree that the tower itself can make a fine antenna. Any seasoned Ham knows
this. It is in all the handbooks.

Message-ID: <38FDFB71.B7E13BEC@texas.net>
Source record: 31696

Then, the question might be, why would I need to communicate through satellites? I can't and won't decry such technologies, but if a LEGAL 27 Mhz suits my purpose and fits my budget, why would I want to go through the bureaucratic red tape that comes with becoming a ham?

We live in a time where convenience is the driving force in almost every decision we make. If it's not convenient for me to do things a certain way and fulfill my purposes, I'll do them a more convenient way. I sure as hell don't have time to build a radio out of scrap TV parts! And I doubt I'd want to budget the time to learn morse code and a bunch of electronic theory just to talk on the radio.

And seriously, I'm not the loud-mouthed backwoods moron who makes the CB medium the garbage pit you believe it is. If someone can provide a good reason for me to get a ham license, I'll totally look into it.

>
>
>
Thank you sir for clearing the matter up. I still have the
original Antron 99 that I purchased over twelve years ago, and
in those days they cost an arm and a leg.

As far as CB in the UK was concerned at that time it was illegal
to use any antenna that was more than 39 inches in length. They
have changed the law now so that you can use an antenna up to 21
feet in length, and as the Antron is 18 feet in length that
qualifies it as legal.

I was working illegally for a few years with the Antron, and it
opened up a whole new world. Talking to the USA and Canada on 4
or 5 watts was easy with the Antron. Anyway I had to quit
transmitting when a neighbour gave me a whole heap of trouble
and sadly I had to give up my precious hobby for over ten years.

Well I have moved to a new location and I am back, though
needless to say the CB scene is not what it was in the UK 12
Years ago. Well sorry to bore you with my problems, and thanks
once more for your help

Kind Regards Mickey

Chris,
In general, the longer the better. You may or may not
be able to tell any difference between these two antennas.
The people you talk to may not be able to tell a difference
either.
The antenna on the roof, while using a shorter radiator,
is in a 'better' location. The other antenna on the trunk,
while 'longer', is in a slightly less 'better' location.
All things being equal (both tuned correctly), I don't think
you'll see/hear any difference. Do what all the 'smart' ones
do, ask the wife/girlfriend which is more acceptable to her.
Then, pick the other one.
'Doc

Any "idiot" can also memorize the test answers and become a ham. You talk like it is exclusively hams that build their own eqipment. Hell, I was building my own recievers before my teen years. So what? What does that make one? No better no worse!

Bill, your assesment was right on target. The guys that are building these amps are not technicans and are just used to copying amps. It sounds as if they are even doing a sloppy job, perhaps they are running into the same problem that happens with some sales/success , just get the amps built and out the door and sacrifice the workmanship, I personally would prefer an amp right from the guy who designed it such as davemade in this case and not the guys who cloned it. Just my observations!

i run yaesu stuff, no home brew here except a few amps and dipoles for 26 and 25 megs and one long wire for swl. we operate AM, SSB, FM, CW, RTTY, Packet on 11 meters all the time but your right no sattelites. i stand corrected with my earlier statement, you dont fear competition from legal "CB" its the freebanding. we are on one of the absolute best world wide dx bands bar-none and have no rules or regulations and still have a blast talking worldwide. we have our own dxcc and iota systems and everything else, all with no stuff shirt attitudes to deal with and no old men talking about there ailments and best of all no test and cheap equipment will do the job and not get you critisized to pieces like on ham radio. yep its not the CB its the freebanding

A friend of mine is selling his Messenger M4V. It is only a couple months old and has very little talk time on it. It is in "Like new" condition with no sctratches or marks whatsoever. I have personally seen the unit and confirmed its output on a watt meter. It also has a external cooling fan mounted on the bottom. He is asking $450 for it or best offer.

Let me know, and send any questions you may have.

> around it.

The original comparison was between cable with 1.3 dB loss per 100'
to cable with 0.196 dB loss per 100'.

At 100', the first cable will lose 1.3 dB.
10^(-1.3/10) = 74% of the power transferred (a 26% loss).

The second cable will lose 0.196 dB.
10^(-0.196/10) = 95.6% of the power transferred (a 4.4% loss).

This difference in loss is 26%/4.4% or 5.86 times (roughly 6X).

No double talk here.

Oh man...other I now am a big guy I gots one of them 'LEGAL CALLS" I have
been a amateur since 1983. But I don't think that CB's operators are all bad
guys! Hell 20 mtrs used to be the WORST band of all. Dogpiling cussing doing
their own thing. I have been putzing with radios since the late 60's started
with a 6 channel Dewalt tube type CB and really enjoy 11 mtrs prob. more than
any other band. 70cm is pretty good not alot of flakes like you there as of
yet. I am not offend about your weenie statement. In fact I was ROTFLMAO!!!!

sides that My mommy can beat up your mommy so there!!! :)

Ron N0FFH

Can't we all just get along???? 0;)

Tim,
That's really amazing! How can you tell that just by
what I said about antennas? Or, could it be that "I'm"
not the one lacking experience? (I don't mean with
antennas either, Tim.) I appreciate your concern about
my sex life, but I think it'll be fine.

(This is 'off topic' but might be interesting.)
There are a growing number of the Internet companies
that will 'pay' you to 'surf' the net. They DO pay you
for using their 'banner' while 'surfing', and if you can
get your friends to participate, they will pay you a small
percentage for the 'surfing' they do also. Usually goes
down 3 or 4 'layers'.
What they don't tell you is that they make a record of
ALL your 'surfing. They use this information to compile
statistics for marketing. Did you catch that above? They
have a record of > ALL < your 'surfing'. What sites you
go to, how long your there, what you looked at or read,
and the possibility exists that they have your 'pass-
words', log-in information, and other data from your
computer (is your SS number on your computer? You 'plastic'
numbers??).
Most people probably don't have anything on their
computer that 'other' people care anything about. I may
have things on mine that is no one else's business, but
not really things that need to be 'secret'. But I certainly
don't want people 'snooping'! How about you?
'Doc

From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <38FE2557.1A68@bellsouth.net>
Source record: 31726

OK, a number of days ago I tried to explain why 26 MHZ was chosen for the particular mission. It is very hard to get thru to a mentality that only thinks in terms of "How far can I get out", "How Loud can I be heard", and "Am I King of the Hill". Frequencies/bands have certain natural characteristics which will exhibit themselves in different ways due to atmospherics, power used, and equipment. What I was trying to do was NOT to "git out" over the whole world. I wanted a low-power, short range frequency for base/mobile, base/air, and mobile/air operations. The noise you describe on 27 MHZ is mostly generated by the users themselves. Twenty six megs in and of itself is mostly very quiet and 27 would be too IF everybody wasn't trying to use it for a BIG POWER, skip-shootin' hobby band. If I had wanted everybody in the world to hear us, I'd have chosen 7 or 14 MHZ. But 26 was chosen for strictly local operations for the reasons stated. I could have used VHF-FM, but these frequencies are easily monitored by scanners. Scanners are used by newshounds to allow them to appear on the scene where they are not always wanted and where they sometimes get in the way. In the event of an air crash, such as the one we were searching for (hoping he had, instead, landed to avoid a storm), people sometimes show up before the scene can be secured and move or remove parts. This is illegal and hinders the investigators from learning the cause of the crash. We also didn't use VHF in order to prevent the family of the missing pilot from hearing distressing news (even when the traffic is encoded). That is a bad way for a family to hear that their loved one has met a tragic death.

The military is trained in a concept called "Frequency Management" which addresses such issues as mission requirements, distances over which traffic must travel, and security. Unlike CB, which is by law, locked in to one band, the military has a great number of frequencies/bands in which to operate. The uses of certain frequencies are determined by the mission at hand and what communications support/resources are required to accomplish the mission. If it is a long range requirement, such frequencies as 2, 4, 6, 7, 10, 14, 18, 20 MHZ are used along with whatever encryption is needed to prevent spying. Various modes are used such as SSB, Packet, Clover, Rtty, etc.. In order to establish what band (which will change frequently) will support the traffic, they will use beacons to see how well a particular band is performing. In less secure environs, one can simply listen to WWV on 2.5, 5, 10, 15, and 20 Mhz to determine which band is "running". Again, in professional environments, it is not always desired to "get out gangbusters". One may only want local coverage. On the particular day I chose 26 Mhz because it was the one that fit the mission requirements. Period. Unfortunately, an illegal freebander thought his hobby was SO important that

he had every right to usurp a US military frequency so he could "Break, Break, skipland, ya got an old copy." It cost him, too.

The fact still remains that these frequencies above and below CB are assigned to legitimate users who have exclusive "ownership" of them (Dispute said "ownership" when they DO try to use such freqs and see who loses!)and they have no obligation to occupy them at all times in order to keep illegals off. Furthermore, these military frequencies are NOT controlled by FCC, and FCC has no power to regulate, assign, or govern those agencies which use them. So no "law" is going to "release" them to the freebanders. Might as well forget about that--at least any time soon. If, say, USAF decides to use 26 MHZ for a particular operation and discovers illegal stations on their frequency, THEY will come after the culprit as well as reporting them to the correct authorities. I have no beef with CBers whatsoever, BUT if I am operating on an assigned frequency for which I am licensed under NTIA and USAF, and I encounter illegal operations on that frequency, I am bound by regulations to report such interference, and if known, the location of it. No flame, but CB was NEVER intended as a hobby band, or a skip-shootin' place, or for shootouts. CB occupies the least priority in the scheme of frequency allocation. There are more important things going on for which frequencies are needed and assigned. To interfere with these is criminal, and that's just the way it is. I didn't make it that way, but it just is. Sorry if I make somebody mad. But they won't be any madder than I was the day I tried to use a frequency allocated to USAF and couldn't because of a "pirate".

2331. Re: Messenger M4V

Newsgroup: rec.radio.cb
Date: 2000-04-19 00:00:00 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <38FE2951.24EF@bellsouth.net>
Source record: 31731

Hill_Shooter,

I have a Messenger M4V that is a really great unit. Mine is used on the ham bands for 80-10 meters. It's really tight, runs cool, and puts out a great deal of "punch". I got from the estate of a ham friend of mine who is now a silent key. Mostly I run barefoot, but it does come in handy when working those DX stations and trying to compete with the base stations who are also trying to work that "rare" station. LOL! I won't tell how much I paid for it, but it is less than half the market value of the M4V. They ARE worth the asking price in good condition.
I was wondering if your friend had any paperwork, owners manuals, or schematics with his amp. If so, could you see if he would copy it and send me a copy? I will pay all costs of copying and mailing. I despar-ately want this material.

Thanks & 73

Jerry

JR,

You know what I'd do if I heard a pirate on the low end of 10 meters? I'd just get on the old keyer, tune up right on top of him, and send out CQs until I got somebody to answer. LOL! CW is hard to QRM with phone! Especially when you kick in the narrow CW filter and/or a DSP. And 15-25 WPM CW can wreak havoc with a phone signal. ....then I'd drop a little line to ole Riley! LOL!

You run Yeasu stuff? I thought you were bragging about having fun
running $50 radios, not like those hams who spend $$$$$.

And just why would I fear competition from freebanding, that is where
those go who are too lazy to get a license and operate legally. Do what
you want there, and be prepaired for any consequences that may result.
Why would I have any reason to even want to operate on the so-called
"freeband" when I can operate on any of the ham frequencies legally. I
earnd my license, I accomplished something, I didn't just run down and
purchase a bunch of equipment, plug it in and start operating on
frequencies that I am not licensed to operate on. I don't have to look
over my shoulder when I am operating. And by the way, you do have rules
and regualations, you just are not abbiding by them. When you key your
transmitter you come under FCC rules whether you like it or not. In
other words you
are strictly illegal. I can say I am strictly legal.

And as far as 11 meters being the best world wide DX ban-bar non, tell
me about all the dx you work on the down side of the solar cycle when
your doing good to work someone across town. Have you ever listened to
17 or 12 meters? They will be open for world-wide dx long after your 11
meters so-called "freeband" is dead.

Thank you for making the supreme distinction between the philosophical difference between CB and amateur. CB is designed to TALK over a short distance. Amateur is designed to EXPERIMENT. Yes, talking is a small part of it, and heaven knows there are plenty of shack on a belt guys around. But amateurs can EXPERIMENT. By definition, CB can ONLY TALK.

the only real question is why would you pick a band that is so prone to pirate use for such a important mission and then be disapointed because a pirate was using it when everybody in the world including you knows its a largely used popular illegal band? you may not be able to find any freq assignments for us pirates but anybody with any amount of real world knowledge would have already known to expect somebody calling skipland there so i wonder why you didnt. 26 megs is really really popular in european countries with pirates so you could have just as easily been bothered by one of those guys and then what would the US government do about it, some countries barely have radio services much less enforcement? nobody involved in this thread have been the "loud and proud " type people you talk about so eloquently. we all run good clean stations and most are using commercial hf gear. youll find the key down KW people in the other threads unless this post brings them in.

The problem is not you, it's your audience. By definition, they are required to have no background whatsoever in electronics or physics. Some do, but it is painfully obvious that most don't. What it will take is for some of the freebanders to screw with the wrong guy at the wrong agency, and then see what happens to his ass.

Doc
You seem to have a level head. So far I like how you try to get your point across without name calling or degrading others who disagree with you.
I guess where I have gone wrong with this disgusion is not clarifying my stand on this issue. I know it is illegal to freeband. I know some of the frequencies have been allocated for buiseness and or military use. I do not condone lawlessness.
What I have been trying to say is any use other than freebanding "today" would be less than practical. And for the most part, those who are authorized to use them, do not. So, instead of going against the grain, why not do the most natural of things, and allow legal freebanding.
Any way I'm a little sort on time now. Maybe later I'll go into a little more detail.

I won't get into to this real deep. No need to. I know you just gave in great detail, why you picked 26 MHZ, and what gave you the right. But to sum it up, YOU made a MISTAKE by picking unreliable frequency. PERIOD!!! You of all people. with your vast know how should have known better. I'm curious. Did the military discipline you for putting your mission at risk?

Tim,

You just don't get it, do you? The reason is that you think totally in terms of a hobbyist; I am approaching the situation in terms of a professional communicator using the parameters which I am given as a military communicator. To approach the scenario the way you would is to say, OK, I'll just use a lower frequency that has longer range and possibly interfere with a mission going on in another area of the country--which would bring down fire and brimstone from some Colonel in the overall command structure. In the ensuing years since that particular mission, the illegal activity, both foreign and domestic, has increased tenfold. The problem we encountered WAS dealt with. At that time, there was only the one freebander that caused a problem. And, as I pointed out, he was located and "liquidated" fairly quickly. He had no idea that he was even on an illegal freqency. He was using an older crystal rig in which he had switched around some crystals and happened to land on our freq. He liked it because it was quiet and thought he might find some DX stations without all the racket..pumped up with his splattering, backyard box, of course. I am not going to abandon operation on a frequency legally assigned in order to give right of way to "squatters" who have NO RIGHT to be there in the first place--I don't care how "clean" his radio is. And I would endeavor to locate the source of such illegal interference, report it through channels to DC/com, and let those in authority remove the interference. That's not my job. It STILL goes back to the land issue. If I find you fishing in my lake on my property, you are going to LEAVE. Period. I don't HAVE to visit that piece of land everyday, every month, or every year. But it still is my land to use as I see fit. As often or as little as I wish. If I give you PERMISSION to fish in my lake or lease the property to you, then you have every right to be there. Same thing with frequencies: Twenty Six megs along with others is assigned to the US military. To say we will give that up to illegal operators is to say that we would yield to freebanders on 4 or 14 megs. It just won't happen. If it were to continue, then people would use the same excuse to justify operating on ANY frequency they like--just because the legal stations were not on at that time. I don't say it to be smart or mean. But sooner or later, those who continue to scoff at the regulations are going to get caught. Agencies and individuals are complaing loudly, and the wheels are beginning to turn. Slowly, but they ARE turning. I would hate to be among those who get mashed when the wheels turn down "my" street.

Respectfully,

Jerry

From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <38FE3FF3.F8B@bellsouth.net>
Source record: 31807

First of all, I DID NOT make a mistake. The freebander made the mistake. The discipline was meted out to the guy who was INTERFERRING with legitimate emergency, military communications. I have already explained why OUR frequency in 26 MHZ was chosen. And it is NOT an unreliable band, especially when used in the way we intended to use it. If not interferred with, it will give reliable air/ground local comm, for up to 100 miles depending on the altitude of the aircraft, and 40 miles base to mobile. On the other hand, I have conversed with C-130 transports 500 miles away on 26 in the right conditions. But for local operations, it works VERY well as long as you don't have interference. And that's why it was chosen. For local work where skip would not be a factor. And even if stations were heard from afar, the discipline of military operators demand that priority be given to the emergency traffic and there would be no interference in the first place.

Lastly, I resent your effort to place the blame for the interference on me in order to justify the presence of an illegal bandit. That will not fly, Mister. There is no way that illegal, out-of-band, useless chatter can be justified in the presence of, or even in the absence of, emergency communications. It doesn't matter which frequency it is: if you are not authorized to use it, there IS no excuse, and if you are caught operating illegally, you deserve the full and harshest penalty allowed by law.

Well call it what you will, run 5 or 6 of them and try calculating the
weight of the rotors, the magnet pull of the stators, friction from the
bearings and brushes and friction from the belt against the pulley.
Calculate that without guessing and you might have something, until then you
are only guessing.....

here is nothing worse than a guy making ridiculous claims about an amplifier, then everyone who buys one expects these numbers and when they don't see them the call and complain, even know the amp is running fine. The 16 might key that but it will not talk that on every ones bird 43, not at 16 volts.

If you are hell-bent on spending $630.00 on an 11-meter radio, let me give you some advice. DON'T. For them kinda' ducats, I'm sure you can find an Icom IC-707, Kenwood TS-430, or Alinco DX-77. These rigs will do everything a turbo will do plus MORE! (except stupid echo) They will go from .5-30 MHz. Therefore, you can listen to hams and shortwave broadcasts too. I'm sure you can find someone out there who could get these radios on 11-meters, but that would be illegal... much like the Turbo. Don't waste your money! If you do, you'll be kickin' yourself in the ass in a year. And if you ever decide to become a ham, you'll already have the radio! Just MY opinion...I could be wrong.

Message-ID: <38FE44FC.FA6CE5DA@home.com>
Source record: 31811

No, he used a reliable frequency which was leggally allocated to him t
use, and found a deadbeat out there using, thinking it belonged to no
one, and hence was free to use.

It gets back to the mistaken notion that if you listen to a frequency
for a few minutes and hear nothing, that indicates that there is no
activity on that frequency, whereas there might just be a lot of
activity which is just under your noise level at that time. There is no
explanation - none - which could justify your use of those frequencies,
whether they are being utilized by their license holder or not.

So if 2 guys in an office can't talk because you squish them,or 2
jarheads in the middle of a military operation using very low power
headsets and the skip starts rollin,its OK to cause interference because
you can't here anything?

Your "call-sign" on an envelope is fine. Just don't put your physical address on it if you're into DX'ing. Or get a P.O. box too. Or use this example for your return address on the envelope:

Unit 319
Vacaville, Calif. 95688

A.E.352
darksid wrote in message <8dlfvaamc1@gxsn.com>...

2384. Here is what I've found so far...

Newsgroup: rec.radio.cb
Date: 2000-04-19 00:00:00 UTC
From: homer <Homersplace@angelfire.com>
Message-ID: <38FE88FC.365280B0@angelfire.com>
Source record: 31834

Here is what I have found so far:

Pin 1 of the PLL (the lock detector) shows 4.68 volts. The PLL is UNLOCKED. I tried removing the switching diode to the LD, but it didn't help. The PLL remained unlocked.

Pin 10 shows 10.240 Mhz. The reamining pins on the PLL appear to be OK according to the SAMS.

Upon aligning the synthesiser, test point 1 and 5 checks out. Test point 6 suppose to show 37.880 Mhz., but it is dead. I did notice that coil # L24 had a broken slug in it. I had to replace the entire coil. This did nothing to restore the radio.

Everything seems to be pointing to a bad PLL, but as I am inexperienced, I hear this is a common mis-diagnosis.

I will test what you have told me and let you know. Thank you.

These old radios are just a hobby of mine, and it's fun to try and figure out a problem instaed of running to the reapir shop. If all else fails, that is something I can always do!

It would be nice if you didn't talk in circles. Lay it on the line.
Not everyone knows who they are. Spell it out. Who builds the best
amp in your opinion--after all that's all it is--your opinion. Some
would say Dave, some would say Bluegill--what do you say? And what
makes your opinion the most valid?

The early ones were nicely built. That's my point.
The latest ones seem to be forced together just to
fill orders.

It can't be said that Dave builds every Dave-Made
amp either. I'm just hoping the guy he employs
that builds my next 2 driving 4 amp (since it
sure as shit won't be an X-Force) has his heart
in it.

I'm an idealist. I'm hoping he actually looks at maybe
every 10th amp to be sure they still represent what he
had in mind when he finalized the current design for
that particular model. Obviously with X-Force that's
too much to ask. Hopefully it won't be too much to ask
that Dave might glance at the next amp I buy.

A bit of common courtesy to at least TRY to type correctly to make COMMUNICATION CLEARER is expected dont you think? Isnt that a common goal for all of us on both radio and internet? Frankly I cant stand reading such garbled crap as Jeff writes. It inevitably come across as illiterate, despite his obvious knowledge of the subject.

Pardon the typos.... if you can find 'em ;)

From what I hear (this could be totally wrong),
Mo-Watt is made by an ex X-Force employee.
Maybe they are the better choice when compared
to the current crop of X-Force amps. I can't
say for sure.

> best offer.

$450 is pretty expensive.

Ask him to see if it has MRF455 or SD1446 transistors
in it. $450 is too much for a used MRF455 equipped
amp. The SD1446 transistors increase the base per-
formance of those amps from 650 peak watts to 800
peak watts. A new 1 driving 8 amp using SD1446s costs
about $500. Used they are worth 50 to 75 percent of
new. That would be $250 to $375 for an SD1446 equipped
unit. Giving your friend $400 is being kind. Don't
go above that no matter what. Shoot for $300--especially
if it has MRF455s in it.

I would say yes. It's very common for VHF low
transistors to be used in high HF applications.
the MRF492 and MRF497 are very common examples.

Get yourself a used Uniden Grant XL (old or new model). Great radio, takes
a lickin' and keeps on ticken. The only thing I wish it did a better job of
is noise canceling, it is lacking in that area. But other than that, darn
good radio.

2402. Re: Tweak & Tuned

Newsgroup: rec.radio.cb
Date: 2000-04-20 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <38fe51fa.509792@news.iserv.net>
Source record: 31902

Greetings!

Many radios are "stock tuned" meaning that they are tuned using a proceedure developed by the individual makers of the radios.

The best means to obtain those "stock tuned" is to use a service manual for that radio or chassis [parts and board that make up the radio and the different designs of the cash and features the line of that model has for that type of chassis].

Most techs usually do a simple tune up - which is simply to check and make sure the modulation works, it produces power, doesn't blow a fuse, and all the functions work. To some techs, this is a simple "Bench Test" before they sell it. It doesn't violate any warranties and you get the radio stock.

Now, when you want to talk "Tune ups" this could get quite involved.

Some:
Clip the modulation limiter, or remove components to increase modulation. Maybe tune, or tweak, e.g - turn tuning slugs and adjust the spacing of open air coils around the Final/Driver or the transmit section. And maybe a turn or two of some of the tank coil cans to improve receive, somewhat.

The above is pretty much standard with any tech or CB shop and is about as far as they can take it without jepoardizing their license. Otherwise a bum steer of a radio will force them to actually lose money as they have to eat the cost of repairing it or sending it in for replacement.

Others:
Do the above and then some, including replacment of the Final or Driver components to increase drive, and modulation.

Some even go as far as to make enhancements [SIC] or modifications to improve or make the reception of signals better.

What you may get in return is,

Either a dynamite sounding radio that poerforms to your expectations...

...or...

A piece of junk that is now worth far less than natural depreciation one can account for.

The best advice is to take this option of "tune and tweak" kinda slow,
or at least don't rush into things with this option.

I always recommend that you take at least a week to think things thru,
you can always get your money back if the radio is left stock.
Besides, you can get a better feel of the radio and take the option of
a return or a more serious upgrade to a better chassis within that
week of trial and error - always check store policy first!

Once a tech is inside, you've bought the farm and you're responsible
for it. That includes any problems with your vehicles operation if
you're using it as a mobile, or interference with your neighbors it
might cause if run as a base.

Source record: 31904

Greetings!

With all the other replies,

Get and use a good quality DVOM with a good set of needle point test leads - you can still verify that something is happening in the RF section with slight changes to the bias level of trasistors used in different sections and you key and unkey.

Just be sure to use a dummy load ok?

To help...

Check to see if you can get 8 volts from the TX side and receive as well. If I'm not mistaken, these things are pretty durable.

I know you get RX and TX lights, but did you check to see if you get at least 2 volts around the receives RF amp transistor?

If you don't get a receive, or a transmit - I suspect a cap that has failed. All along those 8 volt supply lines are 10V rated caps, one may have blown shorted killing the voltage feed to other sections.

As a note of caution, many section use a pull up or pull down current limiting resistor on the line to maintain stability.

What may have happened when a cap fails, is the resistor is gone too - although no real damage is done, it's less stable and can "chirp" when you key up or unkey.

When you replace a cap, look at the feed line and see if there

are resistors used to pull down voltage as it branches out to different sections. These resistors are usually 1/4W in rating but some chassis designs started using those pesky 1/6W small resistors.

There is a few caps that supply the exciter board, check to see if one of these has failed and replace with 16V types of same value.

Also, tantalums are used in the VCO section, see if a small voltage can form of these leads - else replace the caps with the same value - with a slightly higher voltage.

Hope this helps...

Greetings!

A Wilson would work well, but it's base loaded.

A Francis gives you the better length for better chance at getting out
above that roof pillar that the Wilsons' Baseload won't.

http://www.iserv.net/~codyspc/select.htm

The link will help you decide on what type of loading you'd want on
your vehicle - and remember that a lot of it has to do with location
of the antenna. Better the location, the better *any* antenna will
perform.

For hunting you aren't gonna get very good range with FRS. UHF
frequencies are significantly worse than 49MHz. Took a set of UHF radios
camping one time. Next time took the VHF ones and they worked much
better.

If you're buying a 3-pill, I would not recommend a Pirate. Although the
majority of Pirate amps work well, the 3-pill I had was terrible, had to send
it back for credit.
The best 3-pill I've seen to date is the "MoWatt", then X-Force, Dave.

mickey wrote:
>
> I may be wrong but Solercon may have taken over Antron, maybe
> someone else can shed some light on this mystery.

Nope, I talked to the owner of Solarcon several years ago and this is the story he told me.

At one time, Antron was owned by him and another guy. Several years ago, for whatever reason, the two guys decided to split the company. One owner kept the radio accessories (and a few other items) and the Antron name. The other guy kept the antenna (the Antron 99) and started a new company called, "Solarcon." The Antron 99 was renamed the A-99 shortly afterward.

Within a year of the breakup, Antron came out with an antenna called the "Bandit." This was basically the Antron 99 without the tuning rings - the guy at Solarcon has the rights to the tuning ring design (of course, some people might notice that you can tune the Bandit just like the A-99 just by sliding a hose clamp up and down the pole in the same area as the rings on the A-99). I believe that Antron has now sold the Bandit to another company, but I'm not sure of this.

Since that time, both companies have been expanded their product lines to include a wide array of radio parts and accessories. And, in response to an earlier question, Solarcon is still based in Ohio.

Just to set the record straight:
1. Do NOT buy a Galaxy radio. They will splatter big-time if 'tuned & peaked.' The neighbors will love you.
2. RCI sells JUNK! You can be heard +/- 5KHz from your transmitting frequency. Also, look for 'cold' solder joints. Mobile operation will KILL them.
3. President HR-2510. Probably the BEST 10/11 meter radio you could EVER buy! Extremely stable on SSB. GREAT radio.
4. Wilson 1000 antenna...simply the BEST.
5. Buy and 'convert' an HF radio(Yaesu,Kenwood,Icom,ect.) It'll put them Turbos to shame!

All of that fancy 11-meter CRAP is just that. CRAP!!! You one-channel AM'ers should seriously consider SIDEBAND. You can work the WORLD on just 100 watts SSB. But go ahead with your 'key-downs', and show everyone your stupidity. One day, you'll discover SSB. And you'll be selling your 32 pill amps too! FLAME-ON BABY !!!! You AM'ers ain't about shit! SSB RULES! So...SIT DOWN.

Joe Mama

: a 26 meg freq one time.

There is at least one frequency that is used by the CAP. It is not used
all the time, but only activated when hunting for a missing aircraft or
for periodic testing and drills.

Unfortunately, many of the bootleg stations run power, and often overmodulated
signals as well. This splatters into this currently used frequency. I suspect
that there are other occasionally used frequencies as well.

I disagree. He picked a band that was perfectly proper, and would have been
reliable - if the pirate had not been there.

Why should a person "know better" than to pick an authorized frequency that
fulfills the communications requirements.

I suspect that he chose another frequency. I also suspect that the military
and possibly the FCC, had a long talk with the pirate - if he/she was located.

Source record: 31936

Hello, I am sorting through my miniature recieving tubes while I re-tube my Tram D-201.

If anyone needs some of these little buggers, I stock NOS original box, and used that transconduct close as good as new for half price NOS that are guaranteed to perform properly when you get them.

Feel free to drop me a line if in need.

I DO have the larger 6L6's and whatever others for the radios too, but haven't sorted them out lately and am concentrating on reciever tubes for now.

Postage no matter what size order by priority mail anywhere in the USA only 3.00. I use the PO's delivery confirmation tag at no extra cost to you..

All are guaranteed to satisfy your needs.

I work on mutual trust and take pride in trading quality items, fully tested on a TV-7 before shipment at very reasonable prices.. I am a private hobbyist, so I have no catalog. (yet :o)

If needed, Please respond via email with wants, as sometimes I miss reading the group for a day.

I have been working odd hours, so please be patient if it takes a day to get back with you.

73's,

Regards,
Joe Pratt, Tubecntral@aol.com

let me state how i would handle things. this thread has been filled with assumptions that are in correct

>To approach the scenario the way you would is to say,

sure you only heard one,probably because you werent using the vfo much but you would have heard hundreds or thousands more.

>The problem we encountered WAS dealt with. At that time, there was only
>the one freebander that caused a problem.

he may have been dealt with and i dont have any problem with that but you wont get me to believe he didnt know he was doing something illegal.

>And, as I pointed out, he
>was located and "liquidated" fairly quickly. He had no idea that he was
>even on an illegal freqency.

so what your saying is even though you knew the likely hood of your comms being disrupted was very high you didnt care because you "had the right to use that freq". what was more important to you, completeing the mission trouble free or taking back a freq that you feel has been stolen from "you"? seems to me you were asking for trouble.

> I am not going to abandon operation on a fre-
>quency legally assigned in order to give right of way to "squatters" who
>have NO RIGHT to be there in the first place--I don't care how "clean"
>his radio is. And I would endeavor to locate the source of such illegal
>interference, report it through

if your lake was along a toxic waste dump that was unfishable would you still be there trying to fish and fight others because they were too? 11meters is the toxic dump and your freq is the river. and just so youll know frequencies and property are two different things in my opinion. i can physically hold my property in my possesion to keep people from taking it over, if they want the freq they should occupy it more then once every ten years, you know the old saying "possesion is 9/10 of the law"

>It STILL goes
>back to the land issue. If I find you fishing in my lake on my property,
>you are going to LEAVE. Period. I don't HAVE to visit that piece of land
>everyday, every month, or every year. But it still is my land to use as
>I see fit. As often or as little as I wish. If I give you PERMISSION to
>fish in my lake or lease the property to you, then you have every right
>to be there

you knew freebanders use 26 megs, why were you suprised to find one there at the time?

>First of all, I DID NOT make a mistake. The freebander made the
>mistake.

propagation wise its a very good band but as far as interference goes its extremely unreliable. you should have taken things like that into account.

> And it is NOT an un-
>reliable band, especially when used in the way we intended to use it.

skip is always MORE of a factor for local comms because it interferes so heavily at all times during the day. its easier to chat 1000 miles away on 26 megs then it is 100.

>And that's why it was chosen. For local work where skip would not be
>a factor.

the fact is you knew there would be at least a 90% chance that a freebander would be there on this freq but yet and still you act shocked and disgusted that he was there. why didnt you expect it in the first place? sure you have the LEGAL right to use that freq maybe it should but since when has that made a difference to the free banders? i know the ones in mexico and south america dont care if the US government has those freqs.

>Lastly, I resent your effort to place the blame for the interference on
>me in order to justify the presence of an illegal bandit. That will not
>fly, Mister. There is no way that illegal, out-of-band, useless chatter
>can be justified in the presence of, or even in the absence of, emergen-
>cy communications.

once again you seem more concerned about taking back "what is yours" then you did the safety of the mission. what a shame.

>It doesn't matter which frequency it is: if you are
>not authorized to use it, there IS no excuse, and if you are caught
>operating illegally, you deserve the full and harshest penalty allowed
>by law.

yes i do and yes i did. i can have as much fun at home on the yaesu as i can in the car on the midland. i spend money because i choose to go farther with my hobby such as swl and things like that.

>You run Yeasu stuff? I thought you were bragging about having fun
>running $50 radios, not like those hams who spend $$$$$.

i always do and always have

>Do what
>you want there, and be prepaired for any consequences that may result.

i never said you did, some people like talking to senior citizens about health problems and how much ham radio has changed in the last 50 years since they have had there ticket. others like me would rather talk to normal people about what ever happens to be going on that day.

>Why would I have any reason to even want to operate on the so-called
>"freeband" when I can operate on any of the ham frequencies legally.

true enough you accomplished something, you completed memorization of the radio shack or w5yi manuals. congratulations. its like studying for a spelling test in third grade where the teacher gives you all the answers the day before and then beiing really happy because you passed.

>I
>earnd my license, I accomplished something, I didn't just run down and
>purchase a bunch of equipment, plug it in and start operating on
>frequencies that I am not licensed to operate on.

yes you do, maybe you havent noticed all the other "monitor hams" out there ready to turn you in for not id'ing every 10 minutes or at every slip of the tongue.

> I don't have to look
>over my shoulder when I am operating.

the rules and regulations your talking about are for "cb radio". i dont use a cb radio or the freqs so it doesnt apply to me. >And by the way, you do have rules
>and regualations, you just are not abbiding by them. When you key your
>transmitter you come under FCC rules whether you like it or not.

wow, i bet this makes you feel so much better doesnt it?

>In
>other words you
>are strictly illegal. I can say I am strictly legal.

around 96 i just took a small break from transmitting and picked up other things in my life like boxing and going on with shool. radio is a hobby for me not an obsession or a way to make a living like some on here. and btw, 11 is open every evening with stations on it long after 12 is gone dead. hams wont use a band if the signals arent 5/9+ and the whole time we are on 11 meters working the pacific with good 5/5 signals all night while good ham freqs go unused. ask the old time hams that remember the 11 meter dx, after all it used to be the best dx band when it belong to you guys.

>And as far as 11 meters being the best world wide DX ban-bar non, tell
>me about all the dx you work on the down side of the solar cycle when
>your doing good to work someone across town. Have you ever listened to
>17 or 12 meters? They will be open for world-wide dx long after your 11
>meters so-called "freeband" is dead.

your a real dumb ass for saying that and its easy to see you dont know what your talking about. in some african and middle eastern countries freebanding is considered espionage work and a callsign on the envelope could get a persons radio gear taken by the authorities or even them a trip to jail. never write a callsign on a envelope to a foreign country, period.

>Your "call-sign" on an envelope is fine. Just don't put your physical
>address on it if you're into DX'ing. Or get a P.O. box too. Or use this
>example for your return address on the envelope:

2468. Re: Radios: Do's and Dont's...

Newsgroup: rec.radio.cb
Date: 2000-04-20 00:00:00 UTC
From: twistedhed@webtv.net
Message-ID: <18586-38FF11B9-7@storefull-122.iap.bryant.webtv.net>
Source record: 31968

Lets see! Most of my radios are what you would refer to as "peaked". My Galaxy does not bleed any neighbors. Appears to me that someone needs to educate you on proper antenna tuning and grounding techniques. Work the world on 100 watts ssb? An accomplishment? Ha! Thats easy. Do it barefoot. No wonder you bleed.

2469. FS: Old CB radios

Newsgroup: rec.radio.cb
Date: 2000-04-20 00:00:00 UTC
From: GW <weatherguy@worldnet.att.net>
Message-ID: <sjFL4.25996$WF.1007801@bgtnsc04-news.ops.worldnet.att.net>
Source record: 31969

I have come across some old CB radios which I'd like sell.
These are old radios which may be of interest to a collector
or a tech for their parts, though some do work.

1. Realistic Navaho PRO 23 channels. Comes with a D104
mic. I'd call it a 7.5 out of 10, receives/transmits fine, has both
receive & transmit audio. All lights work, S/RF meter does'nt work.
Needs a little work. No manual or box, $40 shipped. The D104 is
worth the price alone, and I will not sell it seperately....

2. Pierce Simpson BOBCAT 23E, mobile. looks nice, I'd call it
an 8.5 out of 10. Fully functioning, all lights work, comes with stock
mic. Good receive/ transmit. No manual or box, 20 bucks shipped...

3. Layfette LM-100, 40 channel mobile with digital display, with stock
mic, receives fine, transmits without audio, maybe the mic?. Looks ok
needs to be cleaned up, $10 shipped...

If anyone is interested in all 3 items, take em all for 55 bucks....

2470. Re: Radios: Do's and Dont's...

Joe Mama,

1.Any radio that is over driven, over modulated, over
'peaked & tweaked' will splatter. 'Messing' with
audio, and IF filters can make a radio splatter.
2.Cold solder joints happen to all manufaturers.
3.HR-2510 the 'best'? For you, yes. Good for you. See#2.
4.Wilson 1000 'best'? For you, yes. Good for you.
5.Ham equipment better than CB equipment? In certain
things, yes. In others, no. What else is new?

Your right, all that CB 'crap' is 'crap', but all
that ham 'crap' is 'crap' too. Is SSB more efficient
than AM? Yes. Is AM an acceptable voice 'mode'? Yes,
just wish more people knew how to use it correctly.
What do 'I' think about 'key-downs'? Not much, they're
a waste of time/spectrum/electricity. Will the "AM'ers"
convert to SSB? Probably not, too lazy, SSB on CB radios
is difficult to use (too many 'golden screwdrivers' and
'tweakers' think they are smarter than the designers).
Would 'I' want a 32 pill amplifier? Nope! Rather have
a single tune amplifier that does the same thing. You
'can' make a single transister amplifier with the output
of a '32 pill', but you can't afford it.

You know what they say about opinions......
'Doc

> then beiing really happy because you passed.

You prove yourself wrong again litte boy, I took my test long before Rat Shack or W5YI had manuals, long before the questions pools complete with answers. I took my test at an FCC office in front of an FCC examiner and you had to know the material in order to answer the questions correctly. There were study guides available, and they were just that, guides. No questions or answers exactly like you might see on the test. No one knew what questions they would get on the test. So yes, I did accomplish something. And you are so quick to discredit anyone who takes the test under today's standard, but at least they put forth the effort to do that, more than you can say. You indicate is is such a snap, a give-away but I notice you don't have a license.

>I
> >earnd my license, I accomplished something, I didn't just run down and
> >purchase a bunch of equipment, plug it in and start operating on

> tongue.

Strange, I have never had anyone turn me in or even threaten to do so.

> the rules and regulations your talking about are for "cb radio". i dont use a cb radio or the freq so it >dosent apply to me.

That is the dumbest statement you could make. That is like going to Mexico and saying that since you are from the Unites States, Mexican laws don't apply to you. Do something to get arrested and see if that holds up. Ask some of the "freebanders" who have been caught and fined by the FCC. Everytime you key your transmitter, on the cb band or anywhere else, you are bound by FCC rules. Just because you are not on

the cb band does not mean there are no rules that apply to your transmissions. Any transmission you make comes under some FCC rule. The "freeband" frequencies you are using require that radios used on those frequencies be FCC "type accepted". Your Yeasu and your amps certainly aren't type accepted. So everytime you key up on your so-called "freeband" you are breaking the rule concerning type acceptance. If the FCC ever does come knocking on your door, please tell them that you were not transmitting on the cb band and not using a cb radio so there aren't any FCC rules that apply to your transmissions. I am sure they will just say, "oh please excuse us for the mistake", and go away. Yea right.

> around 96 i just took a small break from transmitting and picked up other
> things in my life like boxing and going on with shool. radio is a hobby for me
> not an obsession or a way to make a living like some on here. and btw, 11 is
> open every evening with stations on it long after 12 is gone dead.

On really, I have been listening to 11 and 10 lately and this week it has been lucky to be open during the daytime, and it is certainly dead after dark on those days. And as I stated before, when the solar cycle bottoms out, it will be dead for any dx for long periods of time (days, week, months, years).

> hams wont
> use a band if the signals arent 5/9+ and the whole time we are on 11 meters
> working the pacific with good 5/5 signals all night while good ham freqs go
> unused.

Hum, then I guess it is just a myth about all those hams who run very low power (qrp), like less than 1 watt and make dx contacts where you have to pull the weak signals out of all the noise and static.

>ask the old time hams that remember the 11 meter dx, after all it used
>to be the best dx band when it belong to you guys.

I don't have to ask, I remember it myself. I was a ham when 11 belonged to the amateur radio service and you hardly ever heard anyone using the band. I still have a receiver and transmitter that has 11 meters as a ham band on them. We simply prefered to use 10 meters. The reason the FCC allocated it to the cb service is because the hams were not using it. There is very little if any difference between 11 and 10 meters as far as propagation goes.

You can slice it and dice it anyway you want, you do not hold any kind of FCC license, so except for using a cell phone, cordless phone or any part 15 device that does not require a license, you are illegal any time you key up a transmitter on any frequency outside the standard 40 cb channels with anything other than a type accepted stock cb transmitter.

2473. About to finally be back on 11m!

Newsgroup: rec.radio.cb
Date: 2000-04-20 00:00:00 UTC
From: Arkansas Poster <unknown@unknown.net>
Message-ID: <JpGL4.29$1D7.2019063838@typhoon.cei.net>
Source record: 31973

Well, in a couple short days I will be back on 11m!

I have a RCI 2950 and an Antron 99 coming via UPS, it should be here Monday or Tuesday!

I look forward to talking to everyone, and was wondering how the skip conditions have been. I have been out of the radio scene for about 10 years (I'm only 24, you do the math), and can't wait to get some contacts rolling in again!

Also, any mods for the 2950 would be appreciated... I know of a few, like the power increase mod, the freq. unlock mod, etc.

Thanks guys!

Patrick

2474. Looking to buy: Ranger 2950 or 2970 in good (almost mint) condition

Newsgroup: rec.radio.cb

Can't afford to by a brand spanking new one, so if someone has one that they would sell for around $100-150 please let me know. I already have one, but it is finally dying (it is almost 8 years old now and has been in too many rigs that go off-road).

Anyways.. if you have one and want to get rid of it, please let me know.

Thanks,

Puck the Trixter

Dave,
The larger diameter will not give you more usable bandwidth.
It will be slightly more efficient(the coil) than one with a
smaller diameter, just means less 'wire' for the manufacturer. I
seriously doubt if both antennas were tuned correctly, mounted in
the same place, etc, you'd ever tell any difference.

but it has been spelled out many times on this news group that winning
at breaks does not mean you have a better amp, it is the antenna
system , the antenna system , capiche? the proverbial base station on
wheels. these guys don't have mobiles in the mobile sense as most of us
know about , they have portable base stations that are taken to an area
and set up for one purpose and one purpose only. that is to win at
these contest, by putting as much emissions as they can in one
direction so they can be heard on some distant base station. now when
it comes down to it, i think what matters is who can field the best
daily driver . that to me says a lot. heck if i want to hammer down on
a base , then i will do it from a base and not my car. anyway, i know
this will get peak a boo's dander up , but this is what i think,..cd is
out....

Does anybody out there know what the voltage/current rating is for the Eagle
Tomahawk display/meter lamps?
If so please let me know.
Thanks
Tony

geez bean, you know , i know,.............. how i know..... after
being around here for about three years or so, i have learned believe
me. the thing i am trying to say is that hams bitch about cbers and
their use of amps and whatever, but do clandestinely, if you will,
participate in many of the activities that they publically lament. now

i think that there are a lot of hams who participate in many things deemed illegal, but will not admit it , at least publically. heck there are probably a lot of fcc types who do the same thing. they go do their private thing on weekends wherever, then they return to their government jobs during the week and go bust a mudduck like martin and say that it was good. i think if it is good enough for the goose it is good enough for the gander. what is amusing is at the same time they get on here, now maybe certainly not the same ones, of course, but folks like them, having that same common thread of membership in the arrl, and try and tell cb types what we can and cannot do in freeband areas and on 11 meters. i think it is time for these mudducks to get up and bump it down, no doubt about it, you know why? cause it jus bees that way som time, cd is out.....

>the test under today's standard, but at least they put forth the effort
>to do that, more than you can say. You indicate is is such a snap, a
>give-away but I notice you don't have a license.

ok, so now that we know you took the test under the old system we are all real proud of you. want a cookie or a trophy? the test still arent hard. i started my radio hobby at the age of 12 and could have past any of the written test by 13 or 14. why are you so quick to be sure i have no liscences? just because i talk about freebanding and dont sign with a call? i havent seen your callsign anywhere on this thread, have i? all of your assumptions really make you look like a ass. this whole thread ive been telling you how it is and you keep saying how its supposed to be and how it should be. this is the real world.

>>maybe you havent noticed all the other "monitor hams" out there
>> ready to turn you in for not id'ing every 10 minutes or at every slip of
>the
>> tongue.
>
>Strange, I have never had anyone turn me in or even threaten to do so.

you havent been listening to your precious bands much have you? remember all the BS with the maritime net on 14300 or 14313? i seem to remember people snitching right and left trying to get people to loose there tickets. and what about 3950 every saturday night, every time that net opens people start ratting out hams to riley, those sure arent cb'ers reporting them.

>> the rules and regulations your talking about are for "cb radio". i dont use
>a cb radio or the freq so it >dosent apply to me.
>
>That is the dumbest statement you could make. That is like going to
>Mexico and saying that since you are from the Unites States, Mexican
>laws don't apply to you. Do something to get arrested and see if that
>holds up. Ask some of the "freebanders" who have been caught and fined
>by the FCC.

you were quoting CB rules and regs to me, they do not apply because i'm not a cb'er. i never said the FCC had no jurisdiction over me just not under cb rules, thats like saying the fcc can bust you for cb violations while on the

ham bands even though your not tx'ing on cb. thats ridiculous.

>Everytime you key your transmitter, on the cb band or
>anywhere else, you are bound by FCC rules.

not if your not in the USA, a boat registered here, or a territory of the USA. then the FCC cant do anything except file a complaint with the third party country. so you go and tell all the guys in central and south america freebanding that riley is gonna come bust them too while your at it and look just as dumb as ever.

>freeband" frequencies you are using require that radios used on those
>frequencies be FCC "type accepted". Your Yeasu and your amps certainly
>aren't type accepted. So everytime you key up on your so-called
>"freeband" you are breaking the rule concerning type acceptance. If the

why do you keep getting CB regs confused with freebanders? those are cb rules, we are not cb'ers but pirates, no different then the ones on 13 megs or 6 except we use 26 and 27

>On really, I have been listening to 11 and 10 lately and this week it
>has been lucky to be open during the daytime, and it is certainly dead
>after dark on those days. And as I stated before, when the solar cycle
>bottoms out, it will be dead for any dx for long periods of time (days,
>week, months, years).

you havent been listening good then. every night here ive been working and hearing australia every evening on 27555 usb and new zealand at the same time on 26720lsb. the stations are there you just arent in the right spot. worked quite a few west europenas this morning and there was a nice opening with north africa yesterday afternoon too. maybe your on the east coast but here in texas the band has been open every night to the pacific and every morning to europe and every afternoon to south and central america with the exception of the few solar flares we have had lately. as i said before i remember the last solar low and it was ok for me, got lots of other things accomplished. and even during the total low we could still hear and work the friends in south america.

>Hum, then I guess it is just a myth about all those hams who run very
>low power (qrp), like less than 1 watt and make dx contacts where you
>have to pull the weak signals out of all the noise and static.

we do it on 11 too. best ive done this year was 3 watts(yaesu wont go any lower) and a vertical 12 feet off the ground to north africa, algeria to be exact on 26.300 usb. there are some hams that get a kick out of this but i gaurantee they wont try it on a band that isnt booming with 5/9+ reports.

>I don't have to ask, I remember it myself. I was a ham when 11 belonged
>to the amateur radio service and you hardly ever heard anyone using the
>band. I still have a receiver and transmitter that has 11 meters as a
>ham band on them.

good for you, i guess that means you really are a grumpy old man with nothing better to do then bother a service that you admitt to having nothing to do

with. ps i have some radios like that too. wanna take 1 or 2 off my hands?

>There is very little if any difference between 11 and 10 meters as
>far as propagation goes.

just by the nature of it being lower 11 will always be open a little better and
a little longer when MUF is concerned.

>You can slice it and dice it anyway you want, you do not hold any kind
>of FCC license, so except for using a cell phone, cordless phone or any
>part 15 device that does not require a license,

there you go with "I'm better than you are" assumption that youve had thru out
this whole thread. its wearing thin and fastly proving not to be true.

have a nice day and dont forget to take your nitro OM

OK can someone answer this? Copper is selling the solercon 99
for $37.50. Here in the UK the cheapest I have ever seen the
antenna is 45 Pounds Sterling, which converts to exactly $72.
What sort of quantities must Copper purchase from solercon in
order for them to be able to sell them at $37.50, and surely
they must be working on slim margins?

Perhaps this is one for Hillbilly Dave

Cheers Mickey

I haven't found any threads about this President antenna, a so-called 'parabolic' base CB unit, so I thought I'd ask if anyone has any experience with it, or could lead me to a site that has info thereof.
It's possible that my newsgroup search was not thorough enough, and this is a dead topic... that or everyone hated it so much that no one even dares to bring it up anymore. In which case, I'd better duck!

Your correct, there have been and are, lots of bad cb type behavior on
those frequencies, those FEW frequencies out of the hundreds of kHz of
ham frequencies. On the other wide range of frequencies you find
courteous and helpful people communicating. Listen to the cb band and
even the "freeband" at the overdriven splatter boxes being run by foul
mouth individuals everwhere.

> you were quoting CB rules and regs to me, they do not apply because i'm not a
> cb'er. i never said the FCC had no jurisdiction over me just not under cb

I haven't quoted any specific rules to you, I stated you are under FCC
jurisdiction when you key up a transmitter no matter what frequency you
are on.

> not if your not in the USA, a boat registered here, or a territory of the USA.
> then the FCC cant do anything except file a complaint with the third party
> country. so you go and tell all the guys in central and south america
> freebanding that riley is gonna come bust them too while your at it and look
> just as dumb as ever.

We're have not been talking about operating outside the jurisdiction of
the FCC, nothing has been said about operating in a foreign country, you
would be bound by their rules. We're talking about your operation in the
"freeband" here in the USA. I could not care less what the guys in
Central and South America do, that is between them and their regulating
entity. If you are on a boat registered here and in US territory you are
under FCC jurisdiction. If you move to the territorial waters of another
country, you are under their jurisdiction.

Re: type acceptance
> why do you keep getting CB regs confused with freebanders? those are cb rules,
> we are not cb'ers but pirates, no different then the ones on 13 megs or 6
> except we use 26 and 27

They are not just cb rules, operating on just about any band beside the ham bands requires type accepted equipment...police frequencie, emergency frequencies, atc frequencies, ect., ect., require type certification of the equipment, that includes those ligimate users of the "freeband" frequencies except in the case of Amateur radio MARS operation. So if you transmit there without type certified equipment, that is another point of the regulations you are breaking. Type acceptance does not apply only to the cb frequencies.

> you havent been listening good then. every night here ive been working and

> the total low we could still hear and work the friends in south america.

Propagation is different for different parts of the country. We are on the top of the current solar cycle, conditions are good overall. It still stands that on the bottom of solar cycle you "freeband" frequencies will be, except for the occasional opening, useless for long distance communications as will be 10 meters.

>
>
> we do it on 11 too. best ive done this year was 3 watts(yaesu wont go any
> lower) and a vertical 12 feet off the ground to north africa, algeria to be

> gaurantee they wont try it on a band that isnt booming with 5/9+ reports.

Nonsense, the qrp crowed make weak signal contacts all the time. To say they will not work any station that dosen't have a 5/9+ signal just shows more of you ignorance. Listen to the dx'ers, they often struggle to pull a week signal out to the noise.

>
> good for you, i guess that means you really are a grumpy old man

When someone starts losing the argument they often resort to name calling when all else fails.

> just by the nature of it being lower 11 will always be open a little better and
> a little longer when MUF is concerned.

You do have a point there, I have seen openings on 27 mHz when 28 was closed, and I have seen it stay open for many hours while 10 is closed,

but that is the exception rather than the rule. When 10 shuts down, 27
soon follows.

> there you go with "I'm better than you are" assumption that youve had thru out
> this whole thread. its wearing thin and fastly proving not to be true.
>

Never said or implied I was better than you are, just that I chose to
operate legally. Try as you might, you just can't justify illegal
operating practices.

Here is a quote from you previous post: >why are you so quick to be sure
i have no liscences? just because i
talk about freebanding and dont sign with a call?<

And: >you were quoting CB rules and regs to me, they do not apply
because i'm not a
>cb'er. i never said the FCC had no jurisdiction over me just not under cb
>rules, thats like saying the fcc can bust you for cb violations while on the
>ham bands even though your not tx'ing on cb. thats ridiculous.

Not as rediculous as you think. You imply that you may hold an amateur
license, then you imply that the FCC cannot bust you for cb violations
while on the ham bands. Listen to this, if you do hold a ham license and
you are caught by the FCC for operating in the "freeband" or anywhere
else you are not licensed, they can and most likely will, revoke you ham
license even though you may have never broken any rules while using your
ham license.

> have a nice day and dont forget to take your nitro OM

You have a nice day too and don't forget to let mommy change you diaper.

Bill,

He WAS, indeed, located and charged with unlicensed operation, modified equipment, using an amplifier, and interfering with emergency traffic involving life/property. The adminstrative law judge upheld the conviction, he was heavily fined, and given a suspended sentence and the pirate equipment was seized. And that just tickled all of us! I had/ have no sympathy for the little rat! BTW, I was also on the team that located the rascal about 20 miles away from our mission base. And that was fun, too.

>The mo watts yo got, the furthur yo go!
>

Well, there's a brilliant answer.
Too bad it's wholly untrue in light of numerous uncontrollable factors like terrain, antenna system, propagation, etc.
It is precisely this illusion of more power equaling better operations that makes so many radio ops, CB and ham alike, so annoying. :-)

>We're not talking about 3.5W to 5W, I'm talking about getting a radio that
>does 3.5W and bringing it to 10W.
>

But again, that 'difference' will be mostly imperceptible to your local friends, and for long-range stations won't make any difference at all, so it's still a moot point.
Now, if you were to go from said 3.5W to say 50 or 100W, THEN there's be a difference. However, the point is really this:
For local CBing, anything over 5W (REAL RMS wattage, not PEP) or so is plenty of power. The rest of your "strength" has to do a properly tuned antenna system and properly maintained radio, location, and other common sense factors. For 'DX' CBing, 1000W might make you 'louder' to some, but only by a few S-units... and still be unheard by others, since there is no controlling propagation. Skip is what it is, so a whole lot of extra (and almost always noisy) power is no advantage in DX work.
Summary: Extra power is a disadvantage locally and has no advantage DX-wise... it's better to keep your power levels down and work cleanly into an efficient antenna system than to go blindly into the "more power = better CB" mentality. Bleeding, splashing, interfering with neighbors' TVs, etc., is not the problem of most clean and stock (or almost stock) radios and antennas. It is virtually always from those who run too loud, too dirty and too foolishly to know what's right.
Linus

kind of like this whole thread when you were talking about my "supposed" splatter station and making a very big deal out of my age? i'm soon to be 20 by the way.

>When someone starts losing the argument they often resort to name
>calling when all else fails.

we are talking about damage done by freebanders, not fcc regs. get it straight yourself. the point i am making is that freebanders will be here no matter what the US government does because the majority of them are out there jurisdiction being that there in foriegn countries. most small countries do not even enforce radio laws and in most its just a matter of a few dollars to get a liscence (as has been the case more then once here in the states) or a carton of cigarettes to the right guy.

>We're have not been talking about operating outside the jurisdiction of
>the FCC, nothing has been said about operating in a foreign country, you
>would be bound by their rules. We're talking about your operation in the
>"freeband" here in the USA. I could not care less what the guys in
>Central and South America do, that is between them and their regulating
>entity. If you are on a boat registered here and in US territory you are
>under FCC jurisdiction. If you move to the territorial waters of another
>country, you are under their jurisdiction.

you are so stuck on following every regulation, are you getting paid to enforce them? if not i wouldnt work so hard for free.

>They are not just cb rules, operating on just about any band beside the
>ham bands requires type accepted equipment...police frequencie,
>emergency frequencies, atc frequencies, ect., ect., require type
>certification of the equipment, that includes those ligimate users of
>the "freeband" frequencies except in the case of Amateur radio MARS
>operation. So if you transmit there without type certified equipment,
>that is another point of the regulations you are breaking. Type
>acceptance does not apply only to the cb frequencies.

good thing we always have our local friends to talk too, consider it similar to 2 meters during that time with mostly local qso's going on. we wont even need to rely on another mans repeater or anything else. we have our own equipment to talk with and some of us have stations that will equal the range of the best repeaters.

>
>Propagation is different for different parts of the country. We are on
>the top of the current solar cycle, conditions are good overall. It
>still stands that on the bottom of solar cycle you "freeband"

>frequencies will be, except for the occasional opening, useless for
>long distance communications as will be 10 meters.

what i'm saying is qrp doesnt cut it on a band where the signals arent good
from normal stations at 100 watts. if they dont tune around and see 5/9's then
they wont work qrp

>Nonsense, the qrp crowed make weak signal contacts all the time. To say
>they will not work any station that dosen't have a 5/9+ signal just
>shows more of you ignorance. Listen to the dx'ers, they often struggle
>to pull a week signal out to the noise.

i imply nothing. i just say you dont know what i do and do not have or what i
may have had in the past so you shouldnt be a fool and assume things. you dont
have to quote any rules and regs to me. i'm already aware of them.

>
>Not as rediculous as you think. You imply that you may hold an amateur
>license, then you imply that the FCC cannot bust you for cb violations
>while on the ham bands.

as far as these comments below. i'll let your own statement stand and even show
it to you again.

>Ok, so how old are you now? 15?

>When someone starts losing the argument they often resort to name
>calling when all else fails.

>You have a nice day too and don't forget to let mommy change you diaper.

>When someone starts losing the argument they often resort to name

assumptions that are in correct

>To approach the scenario the way you would is to say,

sure you only heard one,probably because you werent using the vfo much
but you
would have heard hundreds or thousands more.
<<<<Our radios have eproms. Frequencies are "burned" into memory with
a computer program>>>>>>. I was not concerned with those others I could
not hear--only the one who was right on our freq.
>The problem we encountered WAS dealt with. At that time, there was only the one freebander
that caused a problem.

he may have been dealt with and i dont have any problem with that but
you wont
get me to believe he didnt know he was doing something illegal.
<<<<<SO? What's yer point? It makes no difference either way. And if he
was aware it was illegal, was he representative of the brain capacity of
the others that do it?

>And, as I pointed out, he
>was located and "liquidated" fairly quickly. He had no idea that he was
>even on an illegal freqency.

so what your saying is even though you knew the likely hood of your
comms being
disrupted was very high you didnt care because you "had the right to use
that
freq". what was more important to you, completeing the mission trouble
free or
taking back a freq that you feel has been stolen from "you"? seems to me
you
were asking for trouble.
<<<<<<We did not "take back" the frequency at that point. We selected
another frequency which required us to clear it with DC/COM and coordi-
nate our operations with other Wings who had scheduled nets. This
created certain difficulties for us AND other units. This was because,
instead of being only concerned with our local comm operations, we had
to work around the operations of 8 other Wings. We "took back" our
frequency by reporting the interference thru the chain of command, and
later doing a "foxhunt" with mobile and portable DF equipment.>>>>>>>

I am not going to abandon operation on a fre-
>quency legally assigned in order to give right of way to "squatters" who
>have NO RIGHT to be there in the first place--I don't care how "clean"
>his radio is. And I would endeavor to locate the source of such illegal

>interference, report it through
<<<<<<<We didn't abandon operations on this frequency by using another
to abate the interference. And, yes, if I hear a stateside freebander
operating there now, I will report it thru channels, and if it is local,
I will personally endeavor to locate him/her and lead FCC/US Marshals
to his door. If he wants to work illegal DX, he can stay within the
40 channels and never hear anything from me.>>>>>>>>>>>

if your lake was along a toxic waste dump that was unfishable would you
still
be there trying to fish and fight others because they were too? 11meters
is the
toxic dump and your freq is the river. and just so youll know
frequencies and
property are two different things in my opinion. i can physically hold
my
property in my possesion to keep people from taking it over, if they
want the
freq they should occupy it more then once every ten years, you know the
old
saying "possesion is 9/10 of the law"
<<<<<<<So, if the police aren't heard on 150 or 450 MHZ every day, or
even once a year, that gives some jerk the right to operate there? Pos-
session is NOT 9/10ths of the law when it comes to frequency allocation.
Whether it is 26MHZ or 7MHZ, illegal operations cannot be tolerated>>>>

>It STILL goes
>back to the land issue. If I find you fishing in my lake on my property,
>you are going to LEAVE. Period. I don't HAVE to visit that piece of land
>everyday, every month, or every year. But it still is my land to use as
>I see fit. As often or as little as I wish. If I give you PERMISSION to
>fish in my lake or lease the property to you, then you have every right
>to be there

<<<<<The bottom line is, like it or not, the freebanders have NO
business interferring with legal, business, or military communications.
If those stateside illegals get caught--and I hope they do--they deserve
the maximum penalty allowed. We can't do anything about foreign inter-
ference except thru the international treaty process. But it CAN be
curtailed here in the US, FCC is examining the problem, and I hear that
it is going to get a little sticky as time goes by. And as I read about
the enforcement activities of FCC, it makes me smile.

Have a good day.

Message-ID: <38FF7F44.3695@bellsouth.net>
Source record: 32019

Linus,

Well said. Not only that, but it is also pitiful to see the fellows desperately trying to get 3 more watts out of their 11 meter radios, and looking for "swing". They don't know that it takes FOUR times the power to get just one S-unit more. I see so many radios come into a friends shop, get set up to factory specs, and return next week with the complaint that it doesn't sound right. Know why it doesn't sound right? Even tho Jim has shown them the correct settings to get the best performance, they turn every knob wide open, go inside where their grub-by little fingers don't belong, and turn every pot they can get to. Then they swear, "Ah didn't touch a thang". Yeah, right! All they know is More power, mo' watts, more modge. Pitiful.

Alas, it would be more interesting to debate this if you knew anything about the subject at hand. Your perspective is only from the "mo' power, mo' watts, mo' swing, mo' modge, mo channels, ad nauseum.

And just for your enlightenment (if that is possible), we worried about the little rat AFTER the close of the mission. He worried about US when the US Marshal knocked on his door! Tell you what: you stick to CBing, which requires SOOOOO much technical knowledge so you can tell the USAF how to run air searches and comm operations, and I'll stick to DOING the missions. Fair enough?

It is illegal anyway (who cares here?) and it won't work anyway.

The reason it won't work is that there are no GMRS radios on the market that will work split and you can't have a simplex repeater where the transmitter and receiver can hear each other. For two, the cost would prohibitive. Even if you had a separate transmitter/receiver pair running duplex (tx on one freq, rx on another) you would need a duplexer type of filter to prevent the transmitter from desensing the receiver.

Kevin, WB5RUE

Gee Tim,
I've been a DX'er for MANY years, and had MANY QSL cards from and to
foreign countries with absolutely NO problem. Most "call signs" are simply
made-up by the operator (Unit 123... 456... ect.) and really DON'T have a
way of being traced to a specific location.Gee... isn't freebanding illegal
here too? I guess this dumb-ass DOES know what he's talking about after all!
There must be ALOT of people in jail in the world for QSL'ing with me.

Dennis (#12) developed and gave X-Force the bias
circuit.

In fact, Dennis called me yesterday and we talked
for 2 hours. He wants me to tell everyone that
he's alive and well and still working at Lucent.

Dennis has NOTHING to do with X-Force beyond
developing their bias circuit and lending a
free hand to answer questions here and there
IN THE PAST.

He's embarrassed that they built the amp that
I received once I told him what it was about.

Danny is gone and X-Force is old news. It's
time to look forward rather than backward.
Look to MoWatt (Danny is involved) and Dave
for the best stuff.

Not everyone is solely interested in AM competition.
For the more well-rounded user, Class B biasing
offers the best in efficiency and clarity on SSB.

It offers none, I know as well as the person I am replying to that the Dave line is designed for on the line RF, nothing more, nothing less. In this type of amp it is more critical to me to make something stay together at 22 or 23 volts for 10 or 12 seconds than it is to make it sound good on SSB, biasing an amplifier is easy compared to making it stay together 22 volts with a high SWR, that to me seems like a lot more of a challenge. If you regulate the voltage on the base of the pills to stay extremely low it is hard to mess up a properly biased amplifier.

Design is fun,
achievement is great,
ten ohm smoke stinks,
BUT exceeding Toshibas specs...
now that is excitement, especially when you amaze your self!!!!!!

2540. Fiberglass Antenna, Is Spray Painting ruining it?

Newsgroup: rec.radio.cb
Date: 2000-04-21 00:00:00 UTC
From: Al Snow <johndoe@hotmail.com>
Message-ID: <6iQL4.70298$q67.1142977@newsread2.prod.itd.earthlink.net>
Source record: 31849

If I get a Wilson Fiberglass Antenna, or a Firestik which both models have extremely ugly colors, red, orange, is it alright if I was to spray paint the fiberglass antenna to a black to fit my car color, or any car color. Looking at these model colors and looking at my color car (silver), it will not match wondering if Icould spray paint it, and wondering if it will ruin the reception or anything with the fibreglass. thanks

2541. Re: wilson 1000 or 5000

Source record: 31850

i agree go with the 5000 , especially if you are a freebander a 5000 is best .
i went from a 1000 to a 5000 , the swrs are flat for 120 freq's . i love it
, and they do hear better

<<<<<<<<<<<<<<>>>>>>>>>>>>>>

Wilson 5000 is the one... Try running that 8 or 16 pill into that 1000...

Yep. Not all of them, thank God, but a lot of them. I have a beautiful Cobra 2000 that was sold to me by an associate at work, and he said it had been peaked and tweaked and modded, etc. So I told him I wouldn't pay what he thought it was worth, because it was not really a collectible, since it had been basically ruined by all the tricks.
He didn't even bat an eye, he said "sure" and there it was.
THEN I had to go in myself and realign it, undo some of the mods, and clean it up.
NOW it works beautifully, only 4w out, clean SSB modulation, and running smooth.
But I never would have had to go into the works and fix it all if it had been kept nice from the start... and he would have gotten more money out of it, too.
Linus

From: IBM233@webtv.net
Message-ID: <20895-38FFD9C8-64@storefull-218.iap.bryant.webtv.net>
Source record: 31855

Thanks for the suggestions. I went with the Francis 96" whip. I have a Midland 79-290. My local CB shop told me that the Wilson 1000 (or even the 5000) couldn't cover all the frequencies plus the 10 meter band without having an extra whip or two cut for the specific frequency range. The Francis cover the whole range. The highest SWR readings are 1.7 to 1 on 29.970 and 1.6 to 1 on 25.535.

"So.please.tell.us.what.advantage.does.class.B.biasing.offer.the.competition.amp.user. "

who cares about competition amps , keydown all ya want . my lil 2 pill talks just fine i don't want to blow the guy 3 miles away out of the water . or make the neibors toaster dance across the counter . my bias'ed 2 pill sounds better then my buddies unbiased 2 pill . takes less watts to push the pills to max . and yes the ssb sounds so much clearer with the biasing . you can fry an egg on mu buddy's 2 pil while mine runs fairly warm .

i dunno if this has to do with the biasing or overall amp design . but my lil xforce beats a lil texas star in every way

All night? Right.

: unused. ask the old time hams that remember the 11 meter dx, after all it used
: to be the best dx band when it belong to you guys.

Wrong. 11 Meters had very little usage by Hams. There are a number of
reasons for this - the major one being that it is not in a harmonic
relationship with the other bands. And 10 Meters is just as good, most
of the time.

The best - all around DX band is 20 Meters.

I agree with ham4fun, I have noticed a difference, sometimes minimal, with diff length jumpers. I prefer to use atleast 4 feet and not more than 6.

Remember, the radio and amp MUST BE separated at least 3 feet, if not more, to protect the radio from RF from the amp.

I have a uniden pro 810e which I feed into a Palomar 90A amp. pushing 100 watts. My Silver Eagle mic is just barely cracked open enough to move the needle.My mic gain is set to 2/3, and I use a Yaesu FC-902 tuner and this setup works fine.

CIAO!

Yes $37.50 is a excellent price for that antenna, there cheaper than most wholesalers who sell them for around $38.00 to 39.00. If copper is buying them from Solarcon, i'm sure they buy, like, 100 to 200 units at a time and get them for about $20.00 each, That would be my best guess.

Here in the UK the cheapest I have ever seen the antenna is 45 Pounds Sterling,
which converts to exactly $72.
What sort of quantities must Copper purchase from solercon in...."
OK, I'll bite. As anyone who knows "Copper" can tell you, the price in
their catalog is always much lower than what you must actually "pay" in order
to get the item. Most retail shops in the US sell the A-99 for $49 - $60, &
after "Copper" pads the shpping/handling the antenna will cost well over $50,
in line with most US shops. In the UK, $72 (really only $10-15 over US _) is
in line with the actual US selling price after you add a little for overseas
shipping from Solarcon Ohio to the UK, & custom duties etc... charges which US
dealers of course don't have to pay........

ok you have given us the reasons you did pick them. now let me give you the
reason you shouldnt have. there are always pros and cons to every situation
that should be considered. surely you didnt think this choice had only pros.

Con #1 : freebanders

Con #2: see #1 as it makes all the difference in the choice

whether or not the freebanders should havebeen there the fact remains they were
and always will be and you didnt take that into consideration at all.

the same would be true with a steel whip. but the francis's are
good antennas. I sell alot to the truckers. they ask me what the
best antenna is for the money.....most bang fer the buck is the
francis. fairly cheap to replace and will handle up to 500 watts
(with a Pair). and not hard to match....

your attitude really sucks. it may or not have hurt somebody but why would you want to take the risk of getting somebody you had a nice conversation with in trouble? there is no denying that some countries have big penalties for freebanding so if you dont have respect for your fellow pirate then so be it. and so youll know most calls now follow the AT dxcc system on 11 meters. guess your one of those guys thats never been off of lsb and worked any real dx. freebanding is illegal here true enough but its not enforced here, dont assume thats the case world wide because its not. were you sending qsl's with calls to the soviet block countries during the cold war too? for the dx'ers sake i hope not. for you to not realize there is a potential for problems is a little closed minded.

>
>Gee Tim,
> I've been a DX'er for MANY years, and had MANY QSL cards from and to

You might want to get a copy of the ARRL Handbook and do a little reading. If you don't know the difference between am and fm, pep and rms, cw and ssb, you aren't ready to operate anything other than a standard, stock CB, let alone violate federal law by installing some sort of an amp which you obviously have no clue about tuning.

Cd,
I can not speak for everyone. But like in cb radio you have many different types of operators. The guys who wants to be legal all the way, the big dogs and wanta bes, the know it alls (you know the type there the ones you can hear talking real loud bullshit over the whole hamfest floor and the stuff on your table is crap and your prices are to high)These are the same guys who got there asses kicked on cb so they move up to ham and realize that there are stations on ham bands that can kick there butts so it is the same old same old. We all deal with these types. They will never be happy. So they bad mouth evrything and everyone.

In ham the big dogs hang out on 20 meters and run large 20 meter arays. Yes the can kick ass big time. Maybe not in the same way as the super bowl.It is simular though listen to pile ups on rare location and then you will hear the dogs bark! there out there running big stuff. Like in cb it is a closed community in a way. But like on the bowl the opperators who are on the band a lot know who the big dogs are and know they must wait there turn before getting there contact.

Radio is a hobby. Notice I said Radio not ham or cb. That is just a area of freqs that we communicate nothing more. 11 meters was once part of the ham bands then the FCC took it from Hams and made it the CB band. This might have started the BS of HAM VS CB. Like I said it is all radio comunication. One you need a ticket to ride and one is a free for all. I happen to like both. There is good and bad in both areas of the hobby. I am proud to say I am part of both and to me it is one. The hobby of radio. I will say for those of you who injoy radio like I do get your ticket you will be glad you did and your not selling out and you can still be a cber. It is all positive. You just have more freqs. Just have fun and screw the mud ducks on both sides of the fence.
73,
Bean 7UUUUUUUUPPPPPPPPPPPPPPP!!!

phil old buddy , i am not sure if that would be legal especially in someone's back yard, at 180 feet , you would definitely need some space to string out those guy wires, and who in their right mind is going to climb that bad boy, not me, that is for sure. my climbing days are over. of course i use to know this guy who had a 75 footer in his yard, and he was a ham and a good technician. he told me it was illegal to use it for cb use but he did anyway. he was so paranoid about charlie that he put a microwave dish on it just down from antron 99 to make it look like it was being used for something besides cb work. oh those wascally hams , what will they think of next?,.....cd is out.....

Hi, I got a Solarcon A-99 Base Station Antenna at a garage sale. No instructions. Looks like you just u-bolt it to a mast and away you go? I plan to use it at my cabin in the mountains.

Says not to adjust rings.

I can find where to buy it online, but no other info, or on deja-news either.

Any particular considerations since I have a metal roof A-frame?

post reply or e-mail responses to cstoyer at interpex dot com.

Thanks,

Charles.

The Firestiks are covered with heatshrink PVC tubing and it could dissolve using the wrong kind of paint. Also, most silver spray paints are very high in aluminum -- that could have an affect on the antenna's performance. So, what's wrong with black??

curious_dan,
The man asked for advice, I gave him what I think
is good advice. It seems your the one who has a problem,
but I'm not sure if that problem is because I was trying
to help someone, or, if you have a problem with 'hams'.
If it's the first, then unless your on this NG to flame,
trash, ridicule, belittle, or are attempting to gain
recognition, I don't know why you are here. If you have
a problem with me or anyone else being a 'ham', then I
wonder what your motive is. If it's the usual, "Hams do
this and CB'ers don't, hams do that and CB'ers don't.",
then your only looking at one side of the 'coin'. If
you have a problem with me, personally, and since you've
made this a 'public' matter, why don't you tell all of us
what this problem is? Maybe it would help you. I know
it would help me 'understand' you. So, until you can
inform 'us' of your problem, I think I'll just call you
'Pinochio'......

Jeroen,
Try this;
www.cushcraft.com

Look through their antennas till you find a 10 meter
monobander. Download the manual for the 10 meter antenna
and 'scale' the measurements for 27 Mhz. Thats one way.
Another is to try the sites for CB antenna manufacturers.
Surely one of them will give dimensions.
'Doc
PS - If your really feeling adventurous, download 'Nec4win95',
an antenna 'modeling' program.

2604. Re: Need help understanding Hooker bi-linier amp switches

Newsgroup: rec.radio.cb

Source record: 32054

Pete,
It sounds like SW#1 turns on the amplifier. UP is for
AM and FM modes. If your transmitting using AM, then use
this position(same for FM). If your transmitting using CW
(code) or SSB, then use this position. Without getting
into a technical discussion, not using the correct position
of the switch can destroy the transistors in the amplifier.
SW#2 turns the pre-amp on or off. A pre-amp is an 'extra'
stage of amplification for the RECEIVED signal(what your
hear). It makes what your listening to louder, the problem
with pre-amp's is that they make the noise louder too. Can't
hurt to try it. If you don't 'like' it, turn it off.
SW#3 changes between how power is measured. PEP is used
primarily with SSB transmissions. RMS is used primarily
with CW or AM/FM. There should be a meter on your amplifier,
right?? Doesn't make a lot of difference which position
this switch is in, only difference is how much the meter
is reading. Absolutely no difference in the amount of
power your transmitting, just in 'how' it's read.
I'm not familiar with your amplifier, I'm just drawing
conclusions from what you described. The only thing I can
'see' that would be critical would be SW#1's position. If
it's in the wrong position for the 'mode' your using, you
take a chance of 'burning out' the transistors.
'Doc

Charles,
Try it as it is. If you get a good match (low SWR),
then leave it alone. If you don't get a good match, if
the SWR isn't under about 1.6:1, then it does need
adjustment. I don't know why 'they' would tell you not
to adjust the 'rings', so do so at your own risk. The
'rings' do adjust the 'matching' to lower SWR.
I wonder why 'they' say not to adjust?

A friend of mine is taking a holiday in the USA in about three months time. I have asked him to bring a couple of CB items back with him.

One of the things that are considerably cheaper in the USA is 40 to 60 amp power supplies. Can any one tell me what would be required to convert a power supply from 120 volts USA to 240 volts UK, and is it worth the cost and trouble.

Regards Mickey

OK, I'll bite. What you are talking about is a 3 element Yagi, and the dimensions for this based upon frequency are pretty standard. Look here on the net for Yagi or check the ARRL Handbook and I feel sure there will be a diagram with formulas to calculate the lengths of the elements. I'd do it for you right now but honestly am short of time and the book is in the other room.

http://members.aol.com/cbmods/cbbeam.htm

Try this link. My first 5 then 8 element beams I built worked off of those instructions. It was "mudduck" at first, meaning the front-to-back rejection wasn't what I wanted because I could still talk to people out my backdoor. Also the side-to-side rejection (or null) did not totally cancel out any signals coming in (I don't think it'll ever will) but with alot of tinkering with the spacing and length of the elements I got the darn thing working 10-8. Until the windstorm of last summer.

Word to the wise... don't use the Radio Shack masting. 2X2 inch square aluminum tubing. The Radio Smack masting had buckled something fierce.

But anyway, the instructiuon shows a 4 element beam. Just take away an element and rock on from there. Cool?

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=310361574

Midland 77-285A 40 (+ 200) Channel CB

This is a superb, small CB. Instant channel 9 and 19 buttons, 4 memory channels, and other goodies. Has no scratches and has been well taken care of. Comes with original mic, box, owner's manual, and accessories. Complete information can be found at the Midland Webpage. When I bought it at one of the local CB shops here, it dead keyed 5W and swung up to 16W. Covers frequencies listed below.

Band A: 25.615 MHz to 26.055 MHz
Band B: 26.065 MHz to 26.505 MHz
Band C: 26.515 MHz to 26.955 MHz
Band D: 26.965 MHz to 27.405 MHz <- Standard CB Band
Band E: 27.415 MHz to 27.855 MHz
Band F: 27.865 MHz to 28.305 MHz

Winning bidder pays $10 and chooses shipping via either UPS or U.S. Postal Service. I would keep this CB for my own use, but I use a Cobra 19 Plus for all of my CB needs now.

Oik! Now I realize what's goin' on.

Timebone and TomMucks (and probably a lot of other rabid pirate/outband/bigwatt/keydown gangsters) are 20 year old kids! It's no wonder their sense of right and wrong seems a bit warped. This is all very natural. At that age, the concepts of social anarchy, darwinism, rebellion, etc. seem very attractive and glamorous. The feeling that you and your group have all the answers and "the other people are just sheep" - is quite common.

The good news is, most kids eventually realize how dumb that stuff is. They grow out of this phase within a decade or less.

The bad news is, some (usually folks with unresolved emotional conflicts) get stuck in adolescence and hang onto these antisocial views well into middle age.

Anyhow, no matter what side of the fence you're on, you might enjoy this pdf document. It's an FCC chart of the entire spectrum from DC to daylight. (HEY TIM! there's a big block of unassigned frequencies at 3 KHz, why not just move in there and take it over huh? LOL)
<A
HREF="http://www.ntia.doc.gov/osmhome/allochrt.pdf">http://www.ntia.doc.go

We here in the UK know a 'tower' as a free standing affair, without guys
and frequently tapered in design.

A mast is normally strait 'with' guys. Most hams use telescopic
sectioned and broadcast stations use fixed sections.

Phil / UK

Well, the experience I have IS 36 years actually. It doesn't matter what
you think. What you say is STILL bull POOP! So what if I moved down
to 7 megs and found freebanders there? Or down to 4 megs and found
them there as well? The have no more right to be on 26.ZZZZ mhz than
they would on those freqencies. It still won't fly. In CONUS, I should
not have to worry about illegal freebanders on ANY frequency not
assigned to CB.

I don't know about CB equipment, but it may be possible to find models which either can be switched between different voltages or can auto-detect like most modern computer equipment.

If they convert AC to DC and don't use the AC, the frequency shouldn't matter.

Charles.

Source record: 32089

Greetings!

I much agree, as a fan of older style Unidens and Cobras, even
Midlands. I've got a pretty good collection of some of the different
mods that have been done, only to be un-done by myself and these
radios work beautifully and sound excellent.

The funny thing is, the Mods that a lot of these radios took on from
these "tech's" are what caused the demise of the radio in it's
original owners hands.

It's a shame that no one seems to understand that the more
conservative the mods, the longer the radio lasts and has a longer
potential for enjoyment.

Sigh...

The part that angers me is that people pay extra money for their
radios they already paid full price on, to get these mods done, when
it worked fine to begin with.

Oh well, easy come, easy go...

On 21 Apr 2000 04:25:34 GMT, while the modem was pondering it's navel,

Greetings!

Good job! You shouldn't be disappointed.

Just remember to save the sale recipts of that Francis.

If it ever breaks you can get a new one - no matter what happens,
within one year of the sale date.

The Francis doesn't need much care, just watch for nicks and splinters
from the fiberglass.

I personally take some furniture polish to it occasionally to help the
fiberglass repel water and remove dirt. Just spray the polish on a rag
and buff the antenna rod. Stays cleaner longer and won't discolor.

A small amount of oil on the threads to help keep the ferrule from
corrosion also helps.

On Fri, 21 Apr 2000 00:32:08 -0400 (EDT), while the modem was

2642. Re: Voltage Conversion

Newsgroup: rec.radio.cb
Date: 2000-04-21 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <3900d3d2.2440649@news.iserv.net>
Source record: 32092

Greetings!

Might be tough. Get a power supply that can work on both 120 V USA and
220 European - these use a switch to engage different windings on that
transformer.

Most transformers in USA are wound for 120 volts across single-phase
AC line with neutral and ground.

Check to see if what we call neutral here, is at 120 volts there. This
can be confirmed by checking both terminals to ground. These two
terminals then are 120 volts, only opposite phase. If thats the case,
then you need to re-wire the plug on the power supply to work one side
and go directly to ground instead of neutral as what we would do in
the USA.

Thats the easiest way I can think of to get around this problem.

On Fri, 21 Apr 2000 11:16:06 -0700, while the modem was pondering it's

I am looking for any MODERN logging software to keep track of my dx'ing. I have found several written for DOS, but I would prefer something made for win9x.

What I require (or want)

1. dupe checking
2. qsl tracking
3. uses system time to enter (so i dont have to enter the date and time every damn time)
4. allows me to specify the WHOLE frequency the contact is on (27.555, etc)
5. it has to be FREE.

Any ideas?

That's about it.

Patrick

Mutant and friends(and probably alot of rabid hams and cantankerous trailer dwellers) are 85 year old men. It is of little wonder their grasp of what is practical is convoluted and warped. At this age it is all very natural for them and the concepts of totalitarianism, police states, severe paranoia and senile and social dementia appear very attractive to them. The feeling that they and their group have all the answers and anyone who does not agree is criminal is quite prevalent.

The good news is these old farts are being left by the road side. They die off more and more each year.

The bad news is, some (usually folks with no life and who were abused in some manner during childhood) carry their trauma to adulthood and never get over it.

Anyhow, no matter what side of the fence you are on, flip on your favorite freeband frequency. The DX is hopping!

P.S. You can run both ways with it Mute! Hope this helped you see that stereotypical rubbish that can fly both ways.

If I were you I would try to purchase a power supply that operates on 240 volts, this is a standard voltage used in residential applications. It is common for people in the US to refer to this voltage as 220. But the actual nominal voltage is 240.

From: "film@eleven" <pfrank55@together.net>
Message-ID: <39010c52@news.together.net>
Source record: 32115

Well, in the purest sense, I'd say yes..I mean, I should be able to make my own choices as long as it doesn't hurt anyone.

As far as being within a fraction of your nose I suppose we need to leave a little room for personal space-
although you can always turn your head,
no?

All I'm saying is live and let live, we all need to allow each other the freedom to pursue our lives as we each see fit. At the same time we must also respect each other, and not judge or expect others to live up to our expectations..not an easy task.

Thanks for your comment.

Ciao

HI, I am wanting to trade my clean Kenwood TS-120s with mobile mount and manual for a very clean or prefferably new DX 2517, I may even toss in a 50watt 2mtr mobile rig if the deal is sweet enough... If you are interested you can contact me at (530) 589-3633 or (530) 589-4483 or badco@jps.net
E-mail would be best since I check it every day..

If you are sick and tired of the locals saying I can't hear you.
First try a better antenna.
I have been told that the best amplifier is a better antenna this stands true.
But More power rocks!
Go for it. I have the best barefoot radio in my area and I did all the mods myself.
It might last 2 minutes, 2 hours, 2 days, 2 months, 2 years, or 20 years that is the chance you have to take if you want to be heard.

2677. Ground plane for a Moblie Antenna

Newsgroup: rec.radio.cb
Date: 2000-04-21 00:00:00 UTC
From: Maveric169 <maveric169@hotmail.com>
Message-ID: <8dretg$3ur$1@slb6.atl.mindspring.net>
Source record: 32127

As you have probably noticed from previous posts I was searching the web and found most everything but what I was looking for. I once saw a 3 radial ground plane kit for a mobile antenna and am now looking for one for my Wilson 5000. If anyone knows of where I can get one please let me know. And if you much about them any comments would be helpful. I have a 86 Camaro and it has a good amount of fiberglass covering the sheet metal. I hear that (and have read) that a ground plane will help out allot. But how much? Is the help worth $10 -$30.00?

Thanks again and '73's were clear.

2678. Ameritron AL-80

Source record: 32129

I have a Cobra 148 GTL, the model before Sound Tracker. It looks clean for the exception of bottom right hand corner is flattened instead of being square. It had fallen on the corner, but its not noticeable unless under inspection. The only mod this radio had was extra freqs and since has been removed back to stock. It has had no tweaks, peaks, or limiters removed.

Looking forward to any offers or trades.

KRS

Dave or Debby,
I wonder why people have lost sight of the fact that the child was here illegally, is the son of his father who wants him back with him, was a pawn in a disgraceful political dispute to gain votes, and is not/was not the 'rightful' responsibility of his grandparents OR uncle? It doesn't matter where the father lives. It doesn't matter what the political affiliation of the father is. What matters is that the child was in effect, kidnapped, by his 'US family', was not allowed to be returned to his surviving parent, and was 'used' by his 'US family' in such a disgraceful manner.
Do you have children? If you were put into this situation, would you want your son back? It is exactly the same situation, just reversed. I can't believe any parent wouldn't want their child returned to them. And would it have made any difference if the father was a citizen of France? If your answer is 'yes', then you are a hypocrite.

Maveric169,
If your talking about the little 'do-hicky' that goes
on the 'whip' part of an antenna, save your money to buy
beer with. First, it's not a ground plane. May look kinda
like one, but isn't because it's connected to the wrong
part of the antenna! If you want to call it something other
than a 'do-hicky', or gimick, call it a 'capacity hat', which
it is. A 'capacity hat' lowers the resonant frequency of an
antenna. If you cut the whip too short, it's a great thing
to have (but then, buying a new 'whip' is probably cheaper).
The 'down' side of using a 'capacity-hat' to electrically
'lengthen' a 'too-short' antenna, is that it makes the usable
bandwidth of the antenna smaller. Instead of covering all
40 channels at a good SWR, it may only cover 39, or 30, or
who knows what.
Instead of the little 'groundplane' thing, put a ping-pong
ball over the tip of the antenna, reduces the coronal
discharge, and will make the natenna less noisy. (0)(-)

onetime/Tom,
No, it is not common to see 'anything', including gas
flowing around inside a tube! A 'glow' from the tube
elements, maybe but very unlikely (depends on the tube).
If you see a 'gas'inside the tube, it means the tube is
bad. Best advice is to throw it away.

Dennis,
You obviously have no knowledge of, or at least are
not willing to demonstrate any knowledge of what
constitutes a dangerous situation, or how to handle one.
The Elian's U.S. 'family' in fact were defying a court
order (cause). They had demonstrated that if given the
chance they would hide Elian, as they had done before.
They repeatedly stated that they would not 'give up'
the child. In a situation such as this, any reasonable
person would believe that they meant what they said.
This would constitute reasonable 'cause' for the INS to
handle the situation as they did. If there is any 'blame'
for this situation to have happened, that blame falls
squarely on Elian's U.S.'family', NOT on the INS.
If you think that the 'good guy' in the white hat
REALLY walks up to the 'bad guy' and faces him down...
you ain't living in the real world Bubba! Which is just
a 'smart-ass' way of saying that 'reason' alone, not
backed up by overwhelming force, is a loosing proposition
from the word 'go'. Was anyone hurt? No. Was there
unreasonable force applied? No. Would it have worked if
the INS had just walked up and asked for Elian? No.
Was any arrests for obstructing justice, contempt of
court, or 'kidnapping' made?? I wish the answer was yes.

Anonymous,
The bed-liner should make no difference if the bolts
holding the mount are in fact making good electrical
contact with the bed of the truck, and the bed is in fact
grounded to the frame of the truck. Make sure your getting
good electrical contact. This is probably NOT the reason
your getting a high SWR reading. What is the overall
length of the antenna from the mount to the tip? If it's
only 102 inches, it's too short. Should be around 108 inches.
If it isn't 108", then add about six inches at the base of
the antenna. Six inches just happens to be the 'normal'
length of a standard spring (whadda ya know!). If you don't
need a spring, use a six(+) inch piece of all-thread with a
nut welded to the top to hold the whip. Adjust the length
till the SWR gets down where you want it.

Dennis,
The picture just doesn't 'look' right. It's either
posed, or a fake, and this is why I think so. The lighting
is just too good. Never find lighting like that in 'real'
situations. No shadows. Unusual 'Swat' equipment, and
usage. This is NOT the picture I saw from another source.
Isn't it amazing that there just 'happened' to be a
photographer in this kind of a situation? Believe me, if
there had been one there, he/she would not have gooten
this particular shot. If anyone in this type situation
pointed ANYTHING at one of the 'Swat'/INS officers, he/she
would have been 'swarmed' imediately. I have a lot of
trouble 'believing' this picture.
'Doc
PS - Send me YOUR picture and I'll put you in the INS officers
place! Not hard to do at all....

Anonymous,
Depending on how the mount is made, and I assume it
has a 3/8"-24 female receptical where the spring screws
on. Find a 3.5" long 3/8"-24 thread bolt, and two nuts
to fit it. Have someone weld one nut to the top of the
bolt. Screw the other nut onto the other end of the bolt.
Remove the spring and whip from the mount, and attach the
bolt to the bottom of the spring with the nut welded on
to the bolt. Screw this whole assymbly into the mount.
By screwing more, or less of the bolt into the mount to
adjust SWR. When you get the SWR right. Tighten the
nut on the bottom of the blot, down on the mount to hold
everything tight. Might make the bolt a little bit
longer just incase. Make it 4.5" long.

They say do not adjust the rings because it is factory set for CB. I own
one and it needed no adjustment....flat match out of box.

Hi Hank;
I have the same thing with my Galaxy Pluto and it's just a dirty contact on your channel selector. See if you can spray some tuner cleaner on them. They may be sealed and then you'll need to replace it or just leave it and keep jiggling the selector.
Good Luck
Steve

These antennas have a low radiation angle for the freq they were designed(1Mhz) at 27 Mhz they will behave like a long wire pointed at the sky with the radiation going mustly up. Some sort of skip may be all that it is good for. I would guess with this high angle that the signal may come down closer in than normal if it comes down at all. Perhaps in the 100 to 300 mile boundary that is normally between line of site and skip contacts.

2706. Re: Top secret Dave Made Amp

I understand.. perhaps I presented my post the wrong way.. I wasnt stating "other tech" in a matter to emphasize any lack of knowledge on Dave's part. Instead, Dave wasnt working on it himself because he is not interested in releasing any "no tune" type amps.

Im assuming that is why you posted your reply?

Jealousy of what, perhaps? No chance of any real communications? A reputation for splatter and noise? I do not 'hate' anyone for doing it, you know, whatever floats your boat, as they say... but don't think for a second that it's anything worth being 'jealous' over... I've heard more and talked farther and clearer (and made real contacts) on 5W SSB than any big-mouth noise-keyer ever has on their big ol' lin-yer and talkyback modge wid de co-phased 102 inch hhhhwhips...

Well, that's just fine and dandy--another one who thinks his precious hobby is more important that someone else's life. If the shoe was on the other foot, i.e. HE was the one lost, injured, and cold, I'll just bet he'd be really hoping those folks he was interfering with were on the way. BTW, you might not care about your interference, but if you get caught at it, in addition to the simple charge of unlicensed operation, you just may find yourself in prison. Interfering with those agencies you don't care if you interfere with is a FELONY. I'm sure you'd find prison less comfortable than your home. It CAN happen.

If you look closely you will see the seams where the selector has
been assembled. These are like several flat wafers that have been
put back to back to make up the selector. You can take an exacto
knife and slightly spread the seams enough to get tuner spray or
cleaner inside the selector. Use a tube on the cleaner can to get
close enough to the seam and to provide enough pressure to spray
the cleaner inside the seam. You will need to do each seam as it
isn't all hollow inside. Each section is self contained. Spin the
selector a few times after spraying and it will work as good as
new again, as long as the contacts aren't actually worn
completely out. If that is the case the rivets can be filed off
and the selector disassembled to clean and tighten up the tension
on the contacts but if you haven't done or seen this done you
could destroy it easy. I don't recommend this unless you feel
very lucky or have the skills to do it. You would have to epoxy
the selector back together being careful not to get any epoxy
down inside the selector.

> Any particular considerations since I have a metal roof A-frame?

Actually, it does not say that you cannot ever adjust the rings, only that the rings should not need to be adjusted under normal conditions (they are already set for the best setting under normal conditions at the factory).

As for your metal roof, the Antron should be placed at least 18 feet from any metal object. Imagine the antenna installed on a pole where you want it and then try to imagine if any part of the antenna will be less than 18 feet from metal. If not, you'll be alright.

However, if the antenna is closer than 18 feet, you may need to retune the antenna (using the rings), or live with a slightly higher overall VSWR. In fact, you may not be able to retune the antenna with the rings to get a perfect match and will have to live with a higher than normal VSWR anyway.

If you have a choice, I strongly suggest that you move your antenna away from your house. The antenna's performance can be adversely affected by nearby metal, even if that metal is 18 feet away (the signal may be reduced in that direction since it cannot travel through the metal).

To solve this problem, you could place the antenna more than eighteen feet above the roof (where the signal travels over the metal roof instead of into the side of it). I realise that this may be difficult with the high roof normally found on A-frame houses, which is why I suggested just moving the antenna away from the house.

JR:

Now hold on one cotton pickin' minute.

It seems to me that you're lumping the "Channel 1 crowd" and the "Agitators" on 19 together with those of us CB'ers who, but for the lack of a license, might as well be HAM's... I've built my own antennas, Hell, I'm running a full wave base loaded Dipole on my truck. I can carry on an intelligent conversation on the radio, and still jam 13 gears and 18 wheels down the road safely. I can go DAYS without saying anything worse than "damn" on my radio, and I enjoy a good DX contact on side band with the best of 'em.

So where's the delimiter? Are you trying to say that EVERYONE who talks on CB is nothing more than pond-scum-sucking-pus-oozing-ingrown-toenail-having-welfare-dependant-trailer-trash-with-30-year-old-BO?

Really? What IS it you're trying to say? Us CB radio OPERATORS would like to know.

Just my two cents.

-CGP

Irony: Bill Gates thinks he's putting out a stable OS. Linus Torvalds thinks he's taking over the world.

Mav:

It's probably not a ground plane, but rather a counterpoise. Same effect, usually, with both, but it's best not to get definitions screwed up.

I noticed a vast improvement in SWR and transmit (2 DB gain 10 miles away from the same location to the same location on the same vehicle to the same base station) when I added an 8-spoked counterpoise to a Wilson 1000 I used to run on a '94 Ranger I used to own.

Your mileage may vary.

WILSON...hands down over K..my friend and I field tested(base to mobile) and compared both antennas. The Wilson consistently out-performed the K, in many areas where the K was 'just marginal', the Wilson was loud and clear!!

We live here in the white mountains, so effective communications is definitely a challenge, especially when mobile; navigating the many notches and valleys.

Ciao!

Greetings!

From what I've gather from Email from Uniden [Customer Service] and
from local dealers. The only PC-122 radios are limited to stock on
hand. Uniden doesn't seem to be interested in this radio anymore or CB
in general really. FRS and Portable/Mobile phones seem to have their
attention as of late.

Greetings!

Guaranteed for life?

Ahemn...take Dave's [Hillbilly Dave] subtle advice...

I wouldn't trust it. No true clarification is made.

Put to you this way. Guaranteed, means that we're not talking
warranty. Guaranteed is just that, Guaranteed. It's a promise to be
responsible. A certianty of a condition.

So, when you decide that mods need to be done to a radio - they may
guarantee their work - but what are the conditions of this
"Guarantee"?

"For life" is just a statement, and an open one. Which or whom "life"
are they referring to? Theirs? Yours? The Radios?

For Grins and giggles, I went out to that site and I found this...

Direct quote

>... Our service work is second to none,
> and we guarantee it for life (with
> a few-minor exceptions).
...[...]...

Ah, yes...there is a catch...

...[...]...
> What is "Wack-Packed" you ask?
> It's no gimmick, but it does make our
> competitors shake and sweat alot.
...[...]...

Whack packed? Hmmm...LOL, Ok...the answer lies below...

...[...]...
> It's an advanced process that
> squeezes every last "WATT" in
> your radio out, while keeping it
> super cool, greatly extending
> the life of the radio.
...[...]...

A "Squeezes every last WATT" special? Hmm...I've heard that before...

...[...]...
> While we can't tell you how we
> do it (proprietary info, you see)
> what I can tell you is that we're
> the only ones who do it, and
> we guarantee it for life!
...[...]...

Ok, Im going to stop here and ask *YOU* a few questions...

When you went to this site. Did you see anything about "Warranty Serivce"? I did see a lot of pictures but nothing stated about warranty involvement.

Please re-read any CB Radios owners manual regarding "Warranty" and compare it to the sites own "Guarantee for life". What does the site claim, and what does the "Factory Warranty" provide?

Note the conditions placed on the warranty, and what the site has said about the conditions of their "Gurarantee".

You could be getting a refurbished Cobra 148, and paying full price for it. There could be a lot of turnover with parts being replaced in these radios. A factory sending out this radio to a dealer, the dealer would have a recourse of action if the radio failed - as long as the provisions and conditions of the warranty have been met. That is the purpose of the "Factory Warranty" - both you or the dealer can return it to get it repaired, at no cost to you or them, except for shipping.

"Guarantee" may mean a good thing, are you sure they aren't getting it confused with "Warranty"?

You put your radios' life in a stores hands when claims are made like that and you purchase from them, or send a radio to them for a "Whack-Pack" special.

I'll spell it out for you.

Radio Warranty applies until a "Whack-Pack" special, or *any* other type of mod is performed.

If the radio fails or doesn't work like it should, you have to return it to the store, not the factory, to get anything done for free on it. I didn't see any true claims that they'd [store] fix a radio for free either!

And you are now at the mercy of the stores Guarantee policy if you want the radio back or to even get some sort of monetary exchange.

If you buy a radio stock, the Factory backs up the claims it has made and the dealer doesn't get stung with a bum steer of a radio. You can get it fixed for free with no out of pocket costs except for shipping.

When the dealer makes a claim that they can do more for the
radio than the Factory can - you have to deal with the dealer
and that stores terms and conditions apply. Forget about
sending in the radio to the Factory to get it working right.
It may cost more for the repair than the radio is worth.

If it sounds too good to be true, it probably is.

Buyer beware!

If you want to compare antennas. get the book "The truth about CB
antennas", or look at one of the many sites on the web on antennas.
The top loaded antenna is your best bet; they are much cheaper
(including most mounts) than the base loaded antenna you mentioned.
Also: mount the antenna as high as you can.

He should have gone back to his father months ago. What REALLY, REALLY gripes me though are the throngs of people waving Cuban flags, screaming that the kid's American civil rights are being compromised. If they truly believed what they preach, they would be doing it in Cuba, or they would be pledging their allegiance to the United States and flying US flags. It appears that every one of them is camped out in Florida, just waiting for Castro to go TU so they can go 'home', even if they were born here.

what would be wrong with "normal" relations? I might like to visit.
The kid needed to be with his father. And right now the cubans are
rioting and burning miami--whats wrong with this picture?

Know what is really nauseating? The Cubans are bitching about the way it was done. Lets see, the Cubans escape their homeland to the U.S. and claim it is better for the boy to remain here than in Cuba. But they are waving and carrying the CUBAN FLAG! They burnt a U.S flag just now. The same laws that allowed them to become citizens are the same laws they blatantly defy. They come here and choose which laws they obey? Charges should be brought against the family for defying court orders and for harboring. Hell, now they are beginning to set fires in the streets. These dirtballs actually want a riot! All those Cubans who feel this was a wrong decision need to go and fight to reclaim their country. That is the way freedom is won.

If it were my son I would rather have him live with strangers than go back to Cuba. No one in the know would force a child to live in that atmosphere. The Cubans are rioting because they know what kind of life the little boy now has ahead of him. If the truth where to be known, the father's family in Cuba are in threat of harm if Daddy doesn't play the game. The Fisherman who found the little boy, was all for him going home till he met with the father. Them the very next day he changed his mind. I wonder what the father said to him to change his mind. This whole thing goes much deeper tham a parents right.

>thats because cber's are stupid...

In case you missed it, the post with which you were agreeing (by adding your own stereotypical comment) was WRITTEN by CBers. I am a CBer who can't stand when all CBers are painted with the same brush... in fact, wasn't the POINT of this thread that not all CBers do things the same way?
I suppose you'd be pleased to know that I think all hams are amoral twats who can't get their 80-year-old heads out of their asses.
Well, that's NOT what I think at all, but I could think that based on what I hear on 75/80 mtrs and 20 mtrs most afternoons... But I choose not to stereotype, unlike you apparently.
Linus

Tried the antenna the other night while waiting for wife to get off from work. Don't know about getting across the parking lot but it would not talk as far as the interstate 1/4 mile away with 4 watts. Weather must of changed or something because all of a sudden I could hear talking and I got to talk with a couple of guys 1 in Atlanta and the other in Dalton which ain't to far away from Atlanta. Guess they were about 200 miles from me.

Who cares? i Say send the sand-nigger kid and his daddy back to the
cubian cigar plant where they were both from

What really pisses me off is all the money they spent on getting this
sand-nigger kid, they could feed thousands of starving families in the
USA here or they could resuced some WHITE children from a parent who
stole them! but noooooooooooooo... they gotta waste MY TAX dollers on
some stupid Sand-nigger!

and that fat ass dyke reno oughta be impeached! she's as bad as slick
willy!

Hrrumph!

Again, you all/some of you seem to forget that Eleon is not a US citizen by any size, shape, or means. He is an illegal!! He doesn't have any fu**ing American civil rights to be compromising in the first place. Screw the kid, his, US relatives and all the damn supports. Ship all their ass back. That is the problem with this country, way to many foreigners! And if any of you fall into that category, sorry. It has come to the point where a Natural born U.S. citizen can't get a damn decent paying job. Why, fu**ing foreigners, that will live on chump change. Screw all these 2nd and 3rd world counties. Let them get their own freedom just like we did. If I offended anyone, my apologies, but that is the way I feel. I spent 4 yrs in the military, and I sickens me that the U.S., land of opportunity, has let this kind of crap happen.
Maveric said it and were clear!

2768. Re: CB radio, beam

Newsgroup: rec.radio.cb
Date: 2000-04-22 00:00:00 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3901BA7B.A4B9C5FF@qnet.com>
Source record: 32218

Hello Jeroen: Here a few places that you can get the assembly instruction for the beam antennas.

This MaCo's web site for there antennas. It is a treasure for CB antennas. I have downloaded all of them onto a disk. This is a treasure because it shows all the length, diameters ect. And it is not out of some book that is not proven to work. Which I have seen more times that I care to admit.

http://www.majestic-comm.com/maco/support/index.htm

Call Hy-Gain at 662-323-9538 and order the assembly instructions for the 3 and 5 element beam antennas. Part numbers are 411 for the 5 element Yagi Beam, and 542 for the 3 element Yagi Beam antenna. But they will get ya fer $5 bucks a copy. Not a bad price when all things are considered.

Still in print, is the book "The Truth About CB Antennas" written by Orr. This is a great book. but I believe some of the antennas shown in the book were not proven, as is the MaCo antennas are.

One thing to keep in mind, is the element length to diameter ratio. These assembly instructions are ment to be used with the same lengths and diameters of aluminum tubing as shown or used by the antennas manufacture. If you deviate from these, the antenna will not work as advertised, and will half to be adjusted to compensate for these changes, if the changes are different enough. E-mail me if you would like some help with this.

Another great book, but does not talk to CB antennas is the "ARRL Antenna Book" available at ham radio stores. It will show formulas to figure the antenna length at what ever frequency you want. Its 20 dollars but well worth it.

Here is some free advice that has cost me many hours and $$$ running up and down ladders. You will need a good tower and rotator to use your beam antenna. If you have never installed these before, look around at the locals who have them and ask them.

The second real pain in the ass in tuning your home brew antenna. This has sent many a strong willed men into the kitchens of America and drove them to drink. You will need a good antenna analyzer or SWR meter to tune the antenna. You will need to document the SWR vs frequency results on paper with the description of the antenna. So that when changes are made you can come back to them and make a slobber discussion after a drunken rage, wanting to through the antenna in the driveway and run over with the truck! Been there done that.

These last to tid bits of suggestion/advice are hard lesson learned.
Take it to the bank.

Hope this helps ya out.

Jay in the Great Mojave Desert, just down the road ah ways from the
fillin station.

Bigradios.com is indeed down.

We sent the payment in to renew registration with internic, and for some rea
son it was not flagged as paid.

It will be back up as soon as the assholes at internic get their shit fixed.

While I agree that Elian should be sent back to Cuba... I must also address the ramblings of Maveric169...

The country has too many foreigners? So, I take it you're American Indian (Native American)? Which tribe? After all, when my family came from Ireland & Scotland 100+ years ago, they were ceretainly foreigners. However, they applied for citizenship, knew English, and were LEGAL.

I don't give a damn what the thing was all about but the fact is that a home in AMERICA was invaded by other AMERICANS who handled it like they were after Adolph Hitler or the biggest drug king pin in the world or a murder suspect. This was a 6 year old child who has had no control over what has happened to him and no control over who his people are or where they are from.He will be bothered by this the rest of his life.
No home in America should have to go through this type abuse by anyone for reasons like this one did . No crime was committed by the family living there, it was all due to the fact that the high up people in our government were not able to make a firm decision in a matter of this type. Just my thoughts.

Well Dennis I have been watching this case with great interest
in the UK, and it would appear that the court made a decision
that the Cubans didn't like. However, that was the courts ruling
and if the Cubans refuse to obay it then they should be prepared
to accept the consiquences. This is not the kids fault, it is
the morons who are purporting to protect him. Once the courts
are disobayed you then have anarchy.

Just my two cents worth

Regards Mickey

No crime done?? Everyone living in that house should be charged with kidnapping. They had received a legal order to relinquish the child at a specific time and location and failed to comply. Further, they said that the child would be taken from them only with force. The Feds complied.

Actually, you are apparently mistaken about several things. Don't mean
to be argumentative, just informative. Firstly, the kid is not illegal.
Any Cuban who makes the shore and can stand up on the beach is legal at
that moment. If the Navy or Coast Guard picks him up at sea, he isn't.
It took special legislation to do that some 40 years ago, but news like
that sometimes travels slowly, and perhaps it hasn't reached you yet.
Uh, which cave did you say lived in? Next, gratefully, everyone in the
USA has civil rights. Even crooks, thugs, and people who don't believe
that all people should have civil rights actually DO have them, whether
they want them or not. By they way, if you don't want your rights, you
can go to Cuba. They don't have much of anything there, including civil
rights as the rest of us understand them to be. What tribe are you a
member of? You are indeed a rare individual in this group, being a
Native American Indian and all. Something to be proud of--having that
pure strain of lineage going back several hundred years. The rest of us
who have foreign heritage should surely be jealous of your background.

No kidding. The point is, if you believe in freedom, then you have to
believe that we all should have the right of choice. Even if you are
not american. So that Elians father can make his choice to live and
raise HIS family in Cuba. We, or relatives of Elian, have no argument
in the judgement of Elians father if we also believe in the freedom
of choice.

As his father you should have that choice, but if you wanted him to
return with you, as his father you should also have that choice.

> ahead of him.

This seems to be the way, in particular among minority groups, if things
don't go they way they wish, then riot and destroy everything. Who says
his life in Cuba is going to be some kind of hell? Yes, he probably
would have better opportunities in the US if he stays here, and chooses
to take those opportunities, but growing up in Cuba Miami, he also has
just as good a chance of winding up in a gang, learning all about the
improper use of knives and guns, stealing cars, and dealing in drugs and
being another burden on our society.

I would like a description of this antenna also, since a full-wave dipole on 11 meters would be approximately 34 feet. And how do you "base load" a dipole? Since a dipole consists of two (that's what the di in dipole means) elements, usually each element a quarter-wave in length, making the dipole overall one-half wavelength, fed at the center. So where is the base?

I've got a 2000 Ranger with a Grant LT, 102" steel whip, 18ft. coax and a firestick mount. The mount has four holes drilled into the bed near the cab. There is a bedliner between the mount and the bed. I am getting a terrible SWR reading (about 3.5). I have tested it with two different 102" steel whips and two different 18 ft. coax. Almost identical reading with all combinations. One person told me that I need to cut out a square piece of bedliner and have the firestick mount flush against the painted metal bed. Then another person tells me that won't help because the ground comes from the screws and that since the bed is painted mounting flush to the bed won't matter. He said that I should use a bumper mount because the bumper is grounded good and the bed is not. I will do whatever I have to, to get my SWR down as low as possible. Can somebody tell me who is right or if neither are and what I should do. Thanks !!

Hey all-
Been off the air now for over 5 years, and recently got a shortwave receiver (DX-399) that covers 0-30 Mhz, and have been bitten by the 11 meter bug again.. Probably going to go with an antron-99 on my 2 story house, but the base station choice has been difficult.. wife wants something she can operate and like (that means no 10 meter converted sets) but she is quite used to standard cb sets. I think I've chosen to get a Washington, but recall a channel 99 kit for these... this type of conversion even my wife could figure out (i.e., it says 65, you're on "channel" 65!) but I can't find this kit anywhere... anyone know where to still find one, and how well they worked?
And at worst, if the channel99 kits aren't available, any other way/kits to do this mod?
Thanx in advance,
Tinkertrain, "558 in the Empire state"

Doc,

I measured the antenna and it is 102" from the base to the tip. I have a spring but it is only 3". So what should I do to get the extra 3inches? I forgot to mention in my first post, but I have this thing that is a 90 degree angle. One end plugs into the cb where the coax goes and the other end the coax plugs into. Does that hurt performance? Thanks for the quick response on the first post ! :-)

Yes there is more . The American Cubans that have held Elian should of
Kidnapped Juan and his whole family. Then we all could agree that the
best thing is for them all to continue living here. But you have no
more rights to split this family then I have a right to kidnap your
child because you live on the other side of the tracks, or you are
a Scientology, or you are a communist, or you are a Canadian.

P.S. or you are a CB'er

I didn't say anything about going to jail for freebanding. The jail term would be for interfering with emergency communications. Now he might get a suspended sentence, but the fine would be pretty heavy. Also if a person transmits a false distress signal, he is liable for all the expenses incurred by ALL the agencies that responded to the false emergency.

No they don't, some enjoy a better quality of life than we do, but most
of the world dosen't. In fact a lot of the world enjoys a quality of
life far worse than Cuba. I suppose we should go to all those countries
that we don't think enjoys our quality of life and kidnap all the
children and bring them here, to hell with the parent's, we know what is
better for the kids. Let's just invade Cuba and go get all those
helpless little children.

If you are saying that you have a 90 degree connector at the base, then no it isn't a problem. Why do you have 18 feet of coax in a pickup truck. The antenna wasn't mounted at the back of your boat trailer was it?? :-) If you need 7 feet 6 inches to do the job, then use 7 feet 6 inches. The rest of the coax just sits there, losing signal strength and satisfying someone's urge to comply with an old wive's tale.

Back to the antenna---did you buy it this way or did some guy fix it up for you under their shade tree? They should be the one to check the swr and get the length right. Make them do the job right.

Big time technically wrong. You can set your watch to you being wrong all the time Gary. Maybe you should send the guy a few dollars to have the antenna installed your way. Most CB'ers just install the coax as it is purchased, or use 18 feet to irate ay, seems to be working.

Old wives tale? I have never heard anyone here on the news group give a technically complete and correct explanation of using coax length. There are many many variables to this story, and again no one has told us all about it, I'd love to hear it.

18 feet of coax is a good length to use. Thousands and thousands of CB'ers use this length in mobile installations, and it works great.

>
> Back to the antenna---did you buy it this way or did some guy fix it up

I'd love to hear you say this in this tone of snootiness to someone in person. And always with the snide remarks. What a big help you aren't.

Hello Anonymous: It sounds like the antenna is mounted near the cab, inside the bed. The antenna maybe affected by being to close to the cab, throwing off the SWR a little.

I mounted a 96 inch Francis Amazer fiberglass whip antenna on a "L" bracket on the aft top edge of the cab. It works great! and the SWR is so low it doesn't even move the SWR meter. I used 18 feet of coax, to irate Gary. The extra length is very insignificant in loss, and would take a Spectrum Analyzer in the .1 dB scale measuring the field strength, to see the difference between 18 feet of coax and say 7 feet of coax. Its also great for driven through the Super Market parking lot and setting off all the car alarms on the fancy new cars. I polish off

the old Texas Star 500.

Jay in the Great Mojave Desert, just down the road ha ways from the
fillin station.

First to answer your question on what tribe..Hopi. Second you are NOT
legal if you make it to shore and can stand, the following web site has the
definition and requirements for legally living in this great country
http://www.ins.usdoj.gov/graphics/services/residency/family.htm
As for you "informative" statement on civil rights, I am wrong. According
to the International convenant on civil and political rights any person
within U.S. territory has basic civil rights. The complete document is
listed at http://www.pch.gc.ca/ddp-hrd/english/iccpr/cn_1.htm
As far as a previous post if your ancestors were in the country legally (by
the definition above) then obviously this doesn't apply to you now does it?
Unless of course you have denounced your citizenship. Furthermore, in my
opinion anyone who BURNS the U.S. flag and represents another country should
just have what their asking for...to go back to their native country and do
all the flag waving they want!

Early model AL-80's requires a kit to put them on 10 meters.You can contact Ameritron for the kit.Later models you can cut the ground wire on the 10 meter coil.Go to www.qrz.com then to 811mod page.It has the mod for all models.

Jay/Mohave,
There's been an argument about coax length for years, as you know. It really doesn't make any difference. Actually, using more coax than needed would hurt more than help--or coiling it up on the floor. But, again, as was said earlier, measuring the loss/gain would be minute, in either case. Can anyone really argue that more benefit is realized by tuning the antenna itself rather than cutting coax to certain lengths? In my experience, it just isn't worth the trouble, so I just use whatever I need to get from the radio to the antenna. I've never been able to remedy a matching problem by cutting coax to "exact" lengths.

How close is the antenna to the cab? I had many low band rigs present
high
mismatch if the whip is close to metal. To see if this is the case, swing
the antenna to a 45 degree angel, test swr, if its better, that's the cause.
You could leave it that way, but relocating the mount away from the cab is
recommended. Also don't worry about coax length the difference between 18
feet and 7 feet will be negligible. But make sure that 90 degree adapter is
ok also. I've seen them go bad .

This is an over publicized media zoo. The photogs were lined up and waiting for this photo op. All the problems in this country and our news media is spending millions on "The Day in the Life of an Illegal Alien". Another week it will be a soap opera. Turn it off and ignore it and tell your friends and neighbors to do the same. Maybe the media will get the hint.

I have used them both and couldn't tell any difference The 1000 actually was flatter than the 5000 but nothing significant. The 5000 had a better coax so it was probably worth the 10.00 premium.

Actually if your fortunate enough to be in Chicago and have Sean at Real World Electronics tune your radio it is guaranteed for life as long as the seals he puts on the case aren't tampered with. I have seen him check out and fix radios bought from Hamfests that still had his seals in tact. So the life long guarantee does exist.

2828. Re: Ground plane for a Moblie Antenna

Newsgroup: rec.radio.cb
Date: 2000-04-22 00:00:00 UTC
From: CitySlicker <manno_d@hotmail.com>
Message-ID: <8dtnmc$dd1@chronicle.concentric.net>
Source record: 32278

Coppers used to advertise them. Make sure you get the one for Wilson antennas. It screws between the coil portion and the mount. Some say they work others say they don't. But that is not new to this hobby is it?

Where did you decide to mount the antenna and what type of mount did you choose?

Check for WARC (12,17,30 meters) bands,I know the GX II has them,if it
has them that is a very fair price and a good radio in it's day (late
'70s).
This radio is not legal for use as a CB so that makes it a poor 11
meter radio in my opinion.

The difference between 102-108" would not account for an SWR reading
that high with a full size 1/4 wave whip,hardly noticeable.

Anonymous,
Thats a good point. You'd think it would be well grounded, but it doesn't have to be. I'm sure you can think of ways to ground the bed to the chassis. If you decide to do some grounding, and if you use 'braid' for grounding straps, be sure to 'tin' it. Bare copper braid will deteriorate in weather. Up under a truck is even worse! 'Tack' welding large diameter wire to the bed and chassis is about as good as you can get. It's a little bit 'over-kill' though. While your at it, ground the motor to the chassis, any body panels to each other and the chassis, etc. It may not help enough for you to 'hear', but it sure doesn't hurt.
'Doc
PS - by the way, the bolts that hold rear spring shackles, are the correct size for that extension bolt, and they're 'hardened'.

------ To All ------

While we're 'venting our spleen', I have this to say about all the "what ever country your relatives are from-Americans". My family came to this country a generation ago, that makes me a part of the second generation in this country. I am NOT an "Whatever-American". I was born in this country and am therefore an "American". Since I WAS born in this country and currently hold citizenship in this country, I am a 'Native-American' (and no, I don't have enough American Indian 'blood' in me to make any difference). My ethnic background stems from another country, but has nothing to do with my citizenship. What's so 'wrong' about being proud of being an American? (OR, being proud of your ethnic background, for that matter.) So unless you hold dual citizenship, your not an "Whatever-American"(substitute the applicable country name for 'whatever'). If you were born a 'Cat', and you learn to bark like a dog, your still a cat, Bubba.

mickey,
The only limit is mechanical. At some point, it's
more dificult to 'justify' making an antenna longer.
Would a very small gain in signal be worth what it
costs you to get it? From a practical point of view,
and depending on the frequency it's designed for, more
than a full wave length is wasted. (900Mhz is easy! but
1.800 Mhz would be a bit harder.)
Didn't know you couldn't use 'beams' in the UK. How
about phased verticals?

"A. H.",
Yes, hi-SWR on low channels and lo-SWR on high channels, means the antenna is too 'short'. BUT, don't change the antenna, that isn't the problem. When you 'trimmed' the ground wire, you 're-tuned' the antenna. The ground (wire, or radials) is the other 'half' of your antenna. Adjusting it's length changes the resonant point and SWR. The simple answer is to restore the ground wire's original length. You might even 'play' with it's length to 'find' the 'best' SWR. And the answer to your question is that your antenna is made up of two parts, the vertical portion, and the ground system(wire, radials counterpoise). Changing the ground wire is changing 'part' of the antenna.
There are two things to remember about mobile antennas, "An antenna's efficiency is directly proportional to it's ugliness.", and, "If it ain't broke, don't fix it.". A very simple rule-of-thumb is that if the wife thinks it's too ugly, then your getting close to the 'perfect' antenna!

It would not be worth rebuilding a 120V power supply to run at 240V - but as some have stated a lot of power supplies made these days are capable of running between 100 and 250 volts input at between 40-60 Hz which should cover most parts of the world. I bought myself one from an Indonesian duty free island near Singapore and all I had to do was rewire the power plug and let rip. Now I have a 30A continuous power supply for about a third of the price I would have paid at home.

Having used a Washington for the last four years, I can say it is a wonderful choice. It sports really, really nice and clean receive audio (though it does display some problems dealing with strong local bleedover/splatter... not a real problem unless you live too close to some real power-mongers!) and the transmit audio is excellent, as I've heard many in use in my area. It's popular rig.
As for the channel conversion, the Expo 'A' and 99 kits are still available (to the best of my knowledge) and do present only a modicum of difficulty when trying to decipher channel jumps. One could opt for a simple (though initially time-consuming) channel 'chart' that shows you what channel is what frequency as you go up the bands. For instance, my radio reads channel 12 on the display when I'm on 27.545, etc.
You could also purchase a frequency counter from Paradynamics or a similar manufacturer, and this would tell you your frequency... they run around $60 to $100 depending on type.
Good luck-
Linus

>

I just have to chime in on this one. First of all that child was NOT
here
illegally, this country has what they call the "dry feet" rule when it comes
to
cubans making it to this country. If they make it here and request to stay
they are almost atumatically given asylum. If you have any knowledge of
the 5th circuit courts ruling you should know this, and by the way that rule
is not age dependent. Secondly this child was biologically fathered by that
man does not make him a parent or guardian. He was born well after him and
the childs
mother were divorced. Thirdly in the last 3 yrs. there has been very little
contact between the father and the child. For him to be oh so concerned now
is at best disingenuous, why did it take him months for him to show up if he
was so concerned?? I can imagine castro is having a veritable shit fit to
get the child back, and it seems as though this administration is somewhat
in love with communists I can only imagine there is some kind of agreement
between Clinton
and castro. And lastly what kind of person would want a child to go back
and face the oppression and poverty and misery that people face in cuba. Did
you
know that by the time the child is 10 or 11 he is shipped off to work in the
sugar cane fields or the tobacco fields in forced labor where the parents
arent even allowed to see the child except once a month or so? And did you

know that by the time he is 15 or 16 he is forced into mandatory military service
to be put anywhere in the world.? Yea what a great life. Did you know the average wage in cuba is about $2-4 a month. If I were that boys father in cuba
I'd be giving thanks to God he made it, and I'd be elated about it, cause I' know
he wont have to go thru the bullshit life I already described.

Thats the proper view....Don`t listen to what anyone says..Go and see for your self...I`m married to a Vietnamese woman and travel to Vietnam every year or two..If you listen to those who have fled there its a hell hole of communism but in reality its a beautiful land and the people are very happy..I`ve found that the majority of people who flee places like Vietnam and Cuba want to come here because freedom to them means the ability to do bad things or be greedy.

I hope I did`nt brain my damage.

Very close to the cab. If you are looking at the rear of the truck, the mount is on the left hand side up near the cab. Tomorrow morning I'll try your idea of swinging the antenna and then testing. It sounds like a good idea; I hadn't even thought of it.

Its definitely worth a try. I'll try to get to the local hardware store
tomorrow and see how it works out. On a side note, assuming that the mount
was grounded to the bed well, is it possible that the bed is not grounded
to the chasis and if so what should I do to ground it?

Also, it's not uncommon to run no bias in Texas Star
amps that are going into competition or are run hard
in daily use in an AM-only application. It's not
uncommon for the 1.6 ohm resistors in the bias circuits
to increase in resistance due to previous transistor
failures and inadvertantly increase the bias to the
point where the transistors run hot and fail frequently.
Many techs overlook that when changing out bad transistors.

I've never seen it since I was told it increases the
price of the amp by $100.

From what Dennis tells me, it's simple, very well
regulated, and immune to the effects of differing
drive levels and stray RF. That's everything you
could ask for in a bias circuit.

There are undesireable effects that Dennis uncovered
by experimenting with common diode and divider net-
work bias arrangements that prompted him to develop
his bias circuit design. The undesireable effects
are not usually catastrophic and are therefore up
for debate as to whether they're even an issue to
the average amp user. Dennis is a perfectionist--
that's as much a reason as any for why he developed
his bias circuit design. The 11th Commandment isn't:
Thou shalt use only Dennis' bias design. His is just
probably the most well thought out.

It's very similar to the Palomar 300A.

2 tubes driving 4 tubes (all TV type
horizontal output tubes) in grounded
grid (Class B). Uses tapped coils for
10 (and 11), 15, 20, and 40 meter
operation. Will probably tune up on
12, and 17 meters as well.

Information on the Palomar 300A is
fairly common. The CB amp books that
you'll find if you look around usually
have it listed. There's a regular
seller on e-bay that sells a CB amp
book that has all the 300A info in
it that was commonly available back
when those amps were being produced.

I've never seen any specific info
for the Golden Falcon Model 400.
I repaired one awhile back; that's
how I know it's similar to the 300A.

I hope this helps.

>
> I just wish I could find a manual/schematic on one.

What is it that you need to know?

The M4V is a pretty basic amp using slight variations on Motorola's original design (Application Report EB-63). The output stage is made up of four, 2-device modules with input splitters and output combiners. The driver stage is single-ended but uses push-pull input and output transformers. Both stages are AB biased using a current limiting resistor and a forward-biased diode that is sort-of thermally attached to the heatsink. There are no frills like protection circuits or output filtering. The only accessory circuits are a bipolar transistor based receiver pre-amp circuit and a bipolar transistor based RF-sensing circuit that controls the transmit/receive relay. The common failures are generally limited to the active devices (transistors) and the mechanical devices (switches and relays).

The Motorola RF Device Data book or the Motorola RF Application Reports book are commonly available sources for the basic info that you'd need to understand and service that amp assuming you already have a basic understanding of analog, solid-state electronics. EB-63 covers the two-device modules and the bias circuit. AN-749 covers the broadband transformers and the splitters and combiners. The trans-formers, splitters and combiners are what usually throw people off when they first look inside one of those amps. Other than that, you're just dealing with plain, old, discreet transistor, RF amplifier stages. In that amp, the driver stage is one, single-ended device, and the output stage is 4 push-pull pairs

of devices in parallel. It sounds more
complicated than it is. If you don't have
the required background to understand the
Motorola info, there are some "dummied
down" books available on CB amplifiers.
However, they don't have all the answers,
and they can give a beginner just enough
info to do more harm than good.

I hope this helps.

: Remember, the radio and amp MUST BE separated at least 3 feet, if not more,
: to protect the radio from RF from the amp.

Bull. If everything is set up right, the amp can be connected directly to
the rig. There should not be any RF on the outside of the amp or on the
coax.

Of course, I am talking about proper amps here - not a plastic cased
splatterbox.

: We here in the UK know a 'tower' as a free standing affair, without guys
: and frequently tapered in design.

: A mast is normally strait 'with' guys. Most hams use telescopic
: sectioned and broadcast stations use fixed sections.

The usual usage is that a mast is a single pole - whether wood, metal
or some other material. It is also a tower, although normally not
called one.

A tower is generally meant to be some more complicated structure, often
skeletal in form.

Example are Eifel Tower and ship mast.

Either may be self supporting or guyed, fixed or telescoping or folding.

Think about that for a moment, Christopher. I don't think you really meant to say a full-wave, base-loaded, dipole. A "full-wave" antenna in the frequencies around the CB band would be well over 30 feet in length. Plus, how do you "base-load" a dipole?

If you've built such an antenna, I certainly like to know more about it. However, I really think you just made a mistake in your rush to post a response to that previous message.

> <snip> I can go DAYS without saying
> anything worse than "damn" on my

Jay in the Mojave <jay123a@qnet.com> wrote:
:> truck. The antenna wasn't mounted at the back of your boat trailer was
:> it?? :-) If you need 7 feet 6 inches to do the job, then use 7 feet 6
:> inches. The rest of the coax just sits there, losing signal strength and
:> satisfying someone's urge to comply with an old wive's tale.

: Big time technically wrong. You can set your watch to you being wrong
: all the time Gary. Maybe you should send the guy a few dollars to have
: the antenna installed your way. Most CB'ers just install the coax as it
: is purchased, or use 18 feet to irate ay, seems to be working.

: Old wives tale? I have never heard anyone here on the news group give a
: technically complete and correct explanation of using coax length. There
: are many many variables to this story, and again no one has told us all
: about it, I'd love to hear it.

What a given length of coax will, and will not do, has been posted here
many times.

Gary is right. Unless the antenna is way out of match for the coax, then
the extra length gains nothing. But the additional signal loss over such
a short run is negligible.

The other possiblility is if a person is running a rig that is pushing the
limits for power handling already - like some of the so-called "competition"
rigs. Here, even a bit of SWR could cause the rig to blow up. I understand
this happens frequently anyway.

But a better solution would be to tune the antenna properly.

: 18 feet of coax is a good length to use. Thousands and thousands of
: CB'ers use this length in mobile installations, and it works great.

Just because a bunch of people believe a harmless myth doesn't mean that
it is helpful.

> Why is she always on the communist's
> side of the issues?

By the way, before you (and others) get too excited about the "jack-booted thugs," let me remind you that it was Reagan and Bush who created them.

Reagan, with his war on drugs, expanded the authority of more than a dozen government agencies (ATF, INS, IRS. etc.) to include direct law enforcement. Reagan arranged for the training of these new "jack-booted thugs." And his adminstration set the policies these "jack-booted thugs" would use in the field.

Bush continued with this effort by adding several more agencies (the Coast Guard, for example), and further extending the scope of authority given to these "jack-booted thugs."

And let me also remind you that it was Republicans, in both the House and Senate, who cheered when Reagan and Bush did this. These congressmen had no problem with these "jack-booted thugs" as long as they were kicking in the doors of drug dealers and "those" type of people.

Of course, when the "jack-booted thugs" started going after conservatives, then they started getting upset (not upset enough to actually do anything about it, but upset enough to get votes from gullible conservatives who are fooled into thinking they actually care).

And, in Waco and Ruby Ridge, those "jack-booted thugs" used the training they received under Reagan and Bush to impliment the field policies they also received under Reagan and Bush. The result is a lot of dead people.

Clinton, and Reno, just inherited these maniacs - they didn't create them. Blame the Republicans for that. The Clinton adminstration has done a lot to reel these "jack-booted thugs" in since those earlier incidents, and the relatively "clean" raid on the home this morning was the result (nobody was injured and no excessive force was used).

As a conservative, it pains me to have to admit that Clinton actually may have done something right this time. And it really pains me to have to ask why the Republicans in the Congress did not?

You seem to know a lot about this situation (information that I have not seen published anywhere). Would you mind sharing your source of intimate information about this family?

> And lastly what kind of person would
> want a child to go back and face the
> oppression and poverty and misery that
> people face in cuba.

So are you saying that all parents in Cuba should give up their children - that they should not want their children to be with them in whatever country they live in? I hate to break it to you, but most cubans do not feel they are being oppressed. And very few live in poverty - Cubans have a high standard of living compared to other latin-American countries. And I'm not really sure how miserable it is to live on a beautiful island in the middle of the Carribean.

> except once a month or so?

Absolute nonsense. I have several friends who travel to cuba on a regular basis and they have never seen a child working in the sugar cane fields (unless the field belonged to his parents). Yes, I asked them about it. By the way, one works for a agricultural program and routinely travels to tobacco and sugar cane fields throughout the country-side.

> And did you know that by the time he is

> the world?

Yes, Cuba has the military draft for eighteen year olds. Its the same type of military draft that this country had for many years, and which American kids sign up for today on their 18th birthday.

By the way, many countries have a draft system. Should the parents in all these countries give up their children to another country because of

it? Or perhaps all Americans should be prepared to turn their children over to another country if the draft is ever re-started here.

For a antenna to perform at maximum and have the lowest
angle of radiation the voltage at the antenna should be 0
volts and the current at maximum. This is determined by coax
length, half or full wave length. Sure some see a SWR
difference but that is because the antenna is not resonant.

See graphic at http://www.iserv.net/~codyspc/coax.htm
Cheers,
John

A person that is born in the country is not an immigrant. And Anglo Saxons did not steal a thing - the indians are still here and are free to travel anywhere in this country they so choose. In other words, the country still belongs to them, but they also have to share it with us (because it also belongs to us).

You really have a twisted view of history. You're one of those people who think the indians were just sitting around the campfire living this peaceful, idealic, life before the horrible Anglo Saxons came, aren't you? Do you really think that the Anglo Saxons were doing something that all these other peoples were not doing?

The indians were constantly at war with each other. They were constantly raiding each others villages and taking whatever they could get their hands on. The losers of these wars were either eaten (if you believe the accounts of recent studies which suggest that some tribes liked to eat human flesh), made to be slaves of the winning tribe, or (if you were a woman) made to be a sex toy of the men of the winning tribe.

And, no, indians didn't live in harmory with the environment. If you travel out west, you can still see the ruins of campgrounds and structures that were abandoned when the local tribe killed off the food supply in that region and had to move on. True, they didn't leave mounds of trash behind, simply because they didn't have that much trash to leave behind (they didn't have plastic plates for tv dinners, etc). However, if the present indian population is any guage, they would have left trash behind if they had it (the indians today generate just as much trash as anyone else).

Yes, Texans took Texas from the Mexicans. But the Mexicans "stole" from whoever was there before them. And whoever was there before the Mexicans "stole" it from someone else. Who knows who had Mexico first (for that matter - who knows who lived in the united states first - perhaps the indians took it from someone else and then wiped out the

previous peoples).

You didn't say what nationality you are, Chris. However, I'm sure your "people" are just as guilty of the things you claim the Anglo Saxons are guilty of. There are very few people, anywhere in this world, that does not have a violent history. With that in mind, perhaps you should not be so quick to condemn others.

Jay, the desert heat has done it to you again. If the guy is using good quality coax, there is no reason at all to use more than he needs to reach the antenna. Beyond that, if the swr is high, there is a problem with the antenna itself or where it is located. I'd love to discuss this with you face to face. Publish your address here and I'll work it into a trip and stop by.

Creating a resonant situation is not brain surgery, and does not include voodoo. Coax length has been discussed to death and despite your position that length is important, the truth is that at best, a long run of coax is acting as a modest tuner, but still doesn't take the antenna to its maximum resonance and at best tricks the radio and your swr meter. The way to fix the problem is to adjust/modify/move the antenna.

It was a pre manufactured part. It just screwed on to the base, then you screwed the coil into it. Passed the "center lead" straight through to the antenna, and ran the spokes off a solid aluminum core off the "shield"

Hope that straightens it out.

I sure can.

It's a PVC pipe about 4 1/2 feet long, with 15 feet of wire wrapped the same direction from nearly the center out to the end, one up, one down (The coils wrap the same way), which goes to a nut that I've attached to the end of the PVC. From there, I brazed the shafts from a couple old junk antennas to the nuts so I could put the whips in to tune the darned thing. Each side is roughly 1/2 wave at 27.385 (Where I transmit SSB), and I've got a nearly flat SWR almost all the way across what the radio will do.

(Oh, and if someone asks me to turn it down, I QRP with the best of 'em too)

Hope that helps.

if it is loaded a full wave antenna can be shortened. a antenna any length can be electically a full wave with out being 36 feet. maybe he did make a mistake dwight, after all everybody does. i remember about 200 mistakes by you the whole time you were defending your position that there is no dx on 11 meters here on rec.radio.cb not too long ago.

Mayhap I did misspeak. I suppose, being the dumb butt CB'er that I am, I assumed the "base" was the "feed point", and since my coil loads are at the "feed point" I just called it "base loaded". Hey, I'll admit, I'm not a HAM. I don't know every technical definition out there, and I do appreciate being filled in and corrected when it's warranted.

The antenna is 1/2 wave on each side, feed point in the middle, and constructed as in my above post.

And I still haven't heard from JR as to whether he's lumping all CB Operators in with the agitators and the "Channel 1 Crowd". (Please fill me in on this, 'cause I need to know if I'm just pond scum, or if I'm worse than pond scum.)

any reason why your spending so much time defending cuba? if youve never been you can hardly go on what somebody has told you. if you think communism is all nice and they live great, i'm sure they would love to have a radio operator with all your two meter skills to help out in emergencies there so i bet you could become a real cuban citizen, better hurry before its too late. for you to say its nonsense about kids working in the fields you really show your ignorance in a big way, although that is nothing new to you. i dont know how much you have traveled to the carribean but kids working in the field is the normal there, its not open for devate. ask sammy sosa from dominican or any natural cuban. they will tell you the truth about the kids working because more often than not they will have had to do the same. i know lots of people from cuba, ones that lived there life there not just visited and stayed in a hotel for a while seeing just what castro wantrs them to see. cuba is a totally regulated society. just listen to radio havana cuba and youll here the government propaganda, some of its so obvious its funny to listen too. dwight, are you a communist? sure seem like you support them. i heard china is looking for good repeater operators too, maybe you can be destinated for there to.

Tim,
You have valid arguments, but when people try to read through your poor spelling and grammar, it tends to color their opinion of your educational background and hence your knowledge of the subject.

For the research minded, the question of illegal immigration has come up here for the Cubans. For the curious, check the Cuban Adjustment Act of 1966 for the details which would make Elian a legal immigrant, not that I think he should stay without his father.

Probably not very well. AM broadcast antennas are made to radiate on the frequency of operation. You might be able to introduce your 27 Mhz signal at the base of the antenna past the ATU using an antenna tuner but your results would probably be dissapointing.
Placing a CB antenna on top of the stucture might be better but remember that most Broadcast antennas are not grounded with only a static dissipation device (two metal balls on rods at the base of the tower closely spaced together or in some cases a spark plug!) so dont expect your rig to last thru an electrical storm.

Thanks for sharing the legal requirements for staying in the country. Fortunately for us you are not an immigration attorney. Here is the text of the Cuban Adjustment Act of 1966. It might help if you knew something before you flapped your gums.

CUBAN ADJUSTMENT ACT

PUBLIC LAW 89-732--NOV. 2, 1966

AN ACT

To adjust the status of Cuban refugees to that of lawful permanent residents of the United States, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.
That, notwithstanding the provisions of section 245 (c) of the Immigration and Nationality Act, the status of any alien who is a native or citizen of Cuba and who has been inspected and admitted or paroled into the United States subsequent to January 1, 1959 and has been physically present in the United States for at least two years, may be adjusted by the Attorney General, in his discretion and under such regulations as he may prescribe, to that of an alien lawfully admitted for permanent residence if the alien makes an application for such adjustment, and the alien is eligible to receive an immigrant visa and is admissible to the United States for permanent residence. Upon approval of such an application for adjustment of status, the Attorney General shall create a record of the alien's admission for permanent residence as of a date thirty months prior to the filing of such an application or the date of his last arrival into the United States, whichever date is later. The provisions of this act shall be applicable to the spouse and child of any alien described in this subsection, regardless of their citizenship and place of birth, who are residing with such alien in the United States.

Section 2. In the case of any alien described in section 1 of this Act, who prior to the effective date thereof, has been lawfully admitted into the United States for permanent residence, the Attorney General shall, upon application, record his admission for permanent residence as a as of the date the alien originally arrived in the United States as a nonimmigrant or as a parolee or a date thirty months prior to the date of enactment of this Act, whichever date is later.

Section 3. Section 13 of the Act entitled "An Act to amend the
Immigration and Nationality Act, and for other purposes",
approved October 3, 1965 (Public Law 89-236), is amended by adding at
the end thereof the following new subsection:

"(c) Nothing contained in subsection (b) of this section shall be
constructed to affect the validity of any application for
adjustment under section 245 filed with the Attorney General prior to
December 1, 1965, which would have been valid on
that date; but as to all such applications the statues or parts of
statues repealed or amended by this Act, are, unless
otherwise specifically provided therein, continued in force and effect."

Section 4. Except as otherwise specifically provided in this Act, the
definitions contained in section 101 (a) and (b) of the
Immigration and Nationality Act shall apply in the administration of
this Act. Nothing contained in this Act shall be held to
repeal, amend, alter, modify, affect, or restrict the powers, duties,
functions, or authority of the Attorney General in the
administration and enforcement of the Immigration and Nationality Act or
any other law relating to immigration, nationality,
or naturalization.

Approved November 2, 1966

_____-

November 2, 1966

(H.R. 15183)

Cuban refuges.

Adjustment of status.

79 Stat. 919.

8 USC 1255

8 USC 1101

Just for argument's sake, and I love to, I choose to burn a flag as an
expression of outrage for something. What do you plan on doing to me?
Understand that what I have done may irritate you to no end but is legal
as free expression under the first amendment. I personally would never
burn an American flag in protest, but I would die to protect the right
of someone to do it--that is the principle upon which the nation was
founded. Burning the flag might make you angry, but doesn't affect your
quality of life. Free expression of thought is the foundation of
freedom.

Just watching this stuff on CNN this morning, and now we got the family in Fl in CNN Whining..... "they stole our child! WAAAAAAAAAAAAAAAAAAH!" if I could say this to these people. People! look, the INS took the damn kid, Get over it! Go home, Smoke a big cuban Cigar and have a nice day and quit wasting money on whining on national TV! He's not leaving the USA until the court decides weather he can or not. so, go home and shut up about it, Yes, They did come into your house with automatic Weapons, They didn't know weather you had any or not (guns, ammo, ect...) and you whine because they didn't tell you they were coming!!!! BWAHAHAHAHAHAHAHA!!!!!!!!! Why? So you could be laying in wait for them with you're guns??? or so you could move the Child???

My point? Quity whining and go HOME!

Stupid Sand-niggers.....

> As for the channel conversion, the Expo 'A' and 99 kits are still
available (to
> the best of my knowledge)
But where would I find one of these? There a url anyone knows of?

. One could opt for a simple (though initially
> time-consuming) channel 'chart' that shows you what channel is what
frequency
> as you go up the bands. >

Been this route... and while I enjoyed the frequency readout (even had one wired straight into one of my radios- an old Cobra 139XLR) my wife hated it... for the simple use of 26.9650 - 27.9950 (all she'd use) I figured a ch99 kit would be excellent...
Thanx for the input! If you find a url, please post it!

2935. Vertical antenna help please

Newsgroup: rec.radio.cb
Date: 2000-04-23 00:00:00 UTC
From: mickey <mickeyNOmiSPAM@mickeys.co.uk.invalid>
Message-ID: <003d975c.0fbeff95@usw-ex0105-037.remarq.com>
Source record: 32385

I am currently running an old Antron 99 and the results I have had from it have been great. However, the Antron is now twelve years old and due for retirement. The Solercon IMAX 2000 seemed like the logical replacement although I have some reservations about erecting a 24-foot antenna near the centre of London. I might add that at the cost of about $120 over here it certainly aint cheap.

Just as a matter of interest can any of the antenna kings tell me what sort of length one could practically go to with a vertical antenna and what sort of improvements in gain can be had by making it longer?

Just for your info beams are strictly illegal for CB use over here in the UK.

Antennas seem to be a controversial subject and as an old Cber friend of mine said many years ago * there is more sh*t talked about antennas than any other subject in CB *

I should be grateful for any advice or comments

Kind regards Mickey

Dittos on your first post.
Sean is not only one hell of a radio tech, but a very fine and honest man.
He has done several radios and assorted equipment for me in the past few years
and produced the best sounding radios and workmanship you could expect. One
time I was plagued with a radio that had substandard solder connections from
the factory (China) and Sean refused to let me pay for shipping to and from him
and I live in California. I would enclose money and he would ship it back with
the radio more than once. By the way he sure made that radio sing along with
the rest of them. I'm still getting compliments on how well his radios sound.
He has also spent a lot of time explaining to me on how the theory of CB
radio / antennas operate and as a result I have put together a number of
systems that work very well. I like to experiment with different antennas
setups and have done VERY well with his help.
Tell Sean hi for me as well.

Not true John, the The voltage or current at the feedpoint is not determined by the length of coax. The angle of radaition is also not determined by the length of coax. Antennas do not need 0 voltage and maximum current at the feedpoint for best performance. The 1/2 wave end fed antenna has maximum voltage, minimum current at the feedpoint.

On Sun, 23 Apr 2000 04:12:14 -0700, John Amero <"johnaNOï¿½PAM"@island.net> wrote:

Well, this is a long story...
Here is the set up I have.. A 3 Firestik way mirror mount on the luggage rack of a Ford Explorer, with a 12' Valor coax running to my midland 77-115, the antenna is a base loaded external coil type. There is a ground wire, since the luggage rack is insulated that runs to the back end of the car and is grounded right around the rear interior light. The write is about 5' long. Well the other day I decided to trim it, to eliminate some excess wire, and the SWR shot up on the lower channels from about 1.3 to about 2.5. This means that my antenna is electrically short.. right ?? so why did the antenna register as short when I messed with the ground wire ?? Any suggestions ???

Greetings!

Ok, flame away if you must, these are my own notes...

For clarification, the issue of maximum and minimum waves is due to the propagation of the wave as it interacts within the coax shield and center conductor when it separates from the coax and into the antenna, both the radiator and counterpoise.

If the antenna is ideal, and no coax existed, this maximum and minimum would occur and we would have such a graphic for that.

Because coax is not perfect, nor is any typical installation/location of the antenna ideal. Impedance at the feedpoint can be far different and generate a reflection due to a connection point and it's own insertion losses.

The effort being shown in the graphic is to make the greatest losses across a resistance, in this case, voltage, reduced to the lowest value it can be. To help reduce current losses using Ohms law, voltage loss thru the resistance, is kept low and reduces current losses even though current is high at the junction.

Electrical [Voltage] Wave losses are inherent in any system, providing proper impedance across all junctions is exceptionally important - as what the graphic describes.

Radio uses the Electrical wave to propagate away from the antenna, the current, or magnetic field, is part of the near field effect. Both propagate, but the voltage wave is what is the most important of the two when it comes to actual reception and transmission of other stations not located in the near field of the antenna in question.

Yes, current can also exhibit a considerable loss, which is why antenna radiator length is so important - maximum current field is generated in the ideal length of a 1/4 wave antenna at the feed point, while a 1/2 wave antenna, or even-fractional length, a voltage maxima occurs at the feedpoint - and that being at the ends of the antenna.

It reciprocates back to radiation resistance, the ideal length versus working values. The shorter [less length] the antenna is, the less radiation resistance is available to provide a working value to both the magnetic [current] and electrical [voltage] waves. [This helps explain why

near field and far field events have their place and why
the efficiency of near field determines the far fields
ability to propagate.]

When thought of in this sense, a Dipole being center fed,
the current is high at the center, while voltage is high
at the ends.

Any failure to apply efforts to keep resistance down, causes
even the most simple of antennas, to fail.

The graphics also describe how any radiator can reflect or
return unused power, as a different impedance, or altered
impedance as a coefficient towards a loss. Losses are
summed up as a total effect on the system.

This is due to the antenna, being reactive, and if
non-resonate is reactive towards the system and is
detrimental in itself.

It alters the balance transfer of power across it's own
junction at the coax.

What I'm trying to say here, is what an ideal antenna exhibits when
resonate. If resistance across all the connection points is kept to a
minimum, losses are reduced - to a level that the antennas own
reactive components are left and coax length becomes a key role player
when the non-resonate antenna alters the impedance of incomming power
with unused power being reflected back at a different impedance.

Conjugate matching is a method used that the antenna is actually as a
different impedance than that of the rest of the system.

Coax, offering it's own ability to act as an Impedance matching
network of reactive components, can be used to offer an acceptable
level of losses to obtain the correct impedance the radio needs in
order to transfer power into the load.

Only now, the load contains the coax, and a non-resonate
antenna as part of the system.

Therefore, coax length becomes important because of the
antennas own inability to be resonate - whether by location
or it's own inherent faults/lack of counterpoise - can be
made resonate due to the antennas own reactive components
can be brought to proper impedance by using a specific
length of coax that the manufacturer recommends.

The Graphics shows an ideal system - intentionally so that people can
understand the goal.

Using specific length of coax, these waves are altered to appear like
the ideal antenna in regards to impedance, but the actual wave fronts
like those shown, may be vastly different and affect the overall

performance of the system.

It doesn't mean that a coat hanger will work using a specific length
of coax.

Coax in itself cannot provide enough impedance transformation
to handle all cases. The antenna itself needs to be designed
with the factor of non-working image reflections that affect
it's own impedance so that it can operate in these extreme
cases.

What it does mean is;

that the antenna manufacturer used a specific length of coax
and it exhibited proper impedance for the widest variety of
applications.

If you can get the counterpoise to work with the radiator with the
proper impedance using random legth of coax, then the antenna system
is resonate with the working mechanics of the physical and electrical
properties that this specific length of coax would have otherwise
provided.

e.g.- the antenna can use what exists in the system without
serious detrimental effects of losses that would otherwise
exist in a specific length situation.

Hope this helps...

I know a way to get these watts to show up on a bird, if this is what you are doing to see these watts you will see the same watts on just about any 16 pill amp. If this is what you are doing I will not let your secret out, but if this is what you are doing I think you will know what I am talking about. I am not going to say anything else on the subject, I know this post may seem confusing, but if the guy is doing what I think then he will not be confused by the post, if you are disregard this post.

Hey, Tim,

Don't you like to have the paperwork with your equipment? I do. I can't remember every detail, and I often refer to schematics and the library of books I keep on a variety of radios, etc. I rarely attempt to repair something without a schematic. It is TOO easy to mess up. LOL! And, no, I don't know everything! That's what friends in the radio hobby/business are for. Another thing, I might buy a radio, etc., which is programmable/menu driven. Each mfr's instructions are different. I need that manual to program it just like everybody else. When I first got my Kenwood TS50 and my Icom 706, I had to read the instructions several times to figure it out. With amps, the same thing can happen--you might apply too much drive, or load the thing improperly --not because you don't know how to run a radio, but because of unfamiliarity with that piece of equipment.

73

Jerry

Hmmm.....one mans noise is another mans DX. It is just like anything else. If you enjoy it,you will spend money on. Cars,boats,big amps,and radios the glow in the dark are my weakness. Some of the best radio stations are on ch.6. I have had some of the most sought after transmitters and receivers around. I.e. Johnson Desk KW,Johnson 500,Johnson Rangers, many Valiants,Collins 32V2,Collins 75A2.A3,and A4 receivers. Just to name a few. Money wasted???? Not to me. Just like some people buy $500.00+ fishing rods....I would'nt but then again I am not a fisherman. It is each to his own.

And with that......BigBamBoo is gone....

But who have I have flamed or made derogatory remarks about. Have you ever read where I called someone "stupid" or a "dumb" CBer. I've read quite a few posts where someone insulted another, or put down the advice of somebody who was trying to help someone with a question. The only things I have presented are facts: freebanding is illegal, interfering with another radio service is illegal, and that there are other services using those frequencies on which freebanders encroach. I am sure there are CBers and hams that know more theory than I do. I disagreed with some posts about coax length, but I didn't call anyone any names. Am I not allowed to present facts, or my opinions, simply because you don't agree with them? Huh?

Cross-posted to: alt.ham-radio.marketplace,rec.radio.cb,rec.radio.swap

Very nice unit with passive avg. or active/powered pep mode. Accepts and switches between 3 couplers simultaneously. Active pep mode requires 12vdc via a standard barrel plug on back which is not included. Selling the mint meter with 2 couplers for 160.00, shipped conus. the guy you are talking too (dropmaul) is Stickman the builder of noname. I remember a guy named PeeWee
told me last year his Noname 8 lb maul did 2800 watts this was right at the Camp Lejune break. He told me not to waste my money
he was going to win the class.Bang he was knocked out first round all 2800 bogus watts. He also uses the Davemade regulator and caps system Better yet if these 16 pill amps are doing these watts which are by far 1000 rms watts better than xforce,davemade,mowatts,gooserider,foxies are doing
you would see the noname suburban as well as his crew 44Magnum,PeeWee etc in the finals
at the big keydowns not the barbeque keydowns they go to.

It will work WARC bands, and if modified, will transmit anywhere it will display. The mod is simple, but being that it IS illegal, the info will have to be gotten from someone else. It is a great ham radio and usually gives very little trouble. I bought one in 1987 and sold it in '98 after I bought my IC-706. Only had one problem with it in all those years and sent it back to get a cracked board replaced. I think it got a spur from lightning because there were faint burn marks around the break, and it was off the air when it occurred. If I could find one for $360, I'd buy it in a heartbeat. Some people have all the luck! LOL!

I beg to differ.....
the MOD is not illegal.... only the USE of the mod to transmit outside the operators priviliges ARE.

> freebanding is illegal here true enough but its not enforced here,
Tim,

The above quote is not exactly true. I gave you one instance where it was enforced in our "tirade" about freebanding in another thread. There was a fellow in Fla called "Rabbit Ears" who got a $20,000 fine for it and operating up in 10 meters. Several hams have been fined and lost their licenses for that. One case is recorded on www.rainreport.com. Look under FCC letters for "Vincent Freebanding Letter". For more fun and games, listen to the Real Audio report there where Riley Hollings-worth tells about FCC's enforcement actions for the previous week. Most of it is actions against illegal hams. But in talking with Riley in person, he is VERY interested in the freebanding issue, and unless he is telling me wrong, this will be addressed soon in a much bigger way. Since they upgraded the Laurel, MD monitoring station, they are able to pinpoint US stations with fewer personnel than was required in days past. Oh, BTW, they warned Millenium Cab in Alaska for operating on 2 meters! Guess those repeaters were just too tempting to resist! LOL!

See ya,

Jerry

I would not rely upon self tapping screws exclusively to guarantee the ground. Liking to experiment, here is what I would do, just for grins and to satisfy my curiosity: Remove the antenna from the truck bed and attach it to a large piece of wood that is long enough to reach from one bed wall the the other and wide enough to not tip over. attach a multistranded wire FIRMLY to the antenna base and in turn connect the other end of the wire to a known grounding point. Make certain that you have good metal to metal contact.Place the antenna near the cab, near the center of the bed, and near the tailgate, and see if any of these movements changes the swr. If it works properly, then you know that the problem MUST be the location where it was attached and/or the ground.

Mucks:
Yep, that's right, HIS family. HE WAS divorced from the woman that GAVE HER LIFE to get EEllian here. Kinda like Jesus did when he died & rose again for sinful man (YOU). We chose HIM & our sins are fogiven IF we repent. Eeelian chose to STAY HERE in his video saying he don't want to go back! Cuba is an incredible SLAVE state. I read an article that people are taxed over 90% there! So if you want him to go back, you isn't an American and I would suggest that YOU carry him with his pinko brainwashed (maybe bullied by INfidel castro) daddy to Havana and say to castro: Here is one of your escaped slaves. I know that he will never have A CB radio, which is good, since I don't promote CB's anyway. I just want to be a good old "American" commie and bring this bad slave back that cause you all so much trouble!!!!! Anglo Dave!!!!!!!!!!!!!!!!

No kidding. The point is, if you believe in freedom, then you have to believe that we all should have the right of choice. Even if you are not american. So that Elians father can make his choice to live and raise HIS family in Cuba. We, or relatives of Elian, have no argument in the judgement of Elians father if we also believe in the freedom of choice.

Well, you are right there. I should've put it another way. Mine was modded to work on MARS, CAP/USAF, and FEMA. But when the NTIA standards were being put in place, the 757 wouldn't meet the stricter stability standards, so I sold it. It's still a great rig.

Source record: 32440

My guess is that the ground wire was well attached at the antenna but poorly attached to the body, and hence was acting as its own counterpoise to the antenna, which would explain why the antenna is too short right now. Try using a fairly large multi-stranded wire, solder a connector to the ends to guarantee a good connection and attach it to a known-to-be-good body ground, and then see what you get. Should work just fine.

His father WAS divorced from his mother. SHE had custody of him. Cuban life (can a Cuban say A-Men to this) in Cuba IS HELL because Communism is HELL (Anti-God humanistic idealology). Seperation from God IS HELL. So, yes, after being in Miami, CUBA WILL BE HELL !!! It's like China & Taiwan. The difference in life OR CB's in/ from those 2 countries IS like Heaven & HELL ! Don't buy CB's made in China! Those people are almost "living in HELL" because of their murderous "rulers!" I'm glad you brought up stealing cars & drugs. Now this is humanistic WRONG reasoning if I ever heard one. Since the cia brings in the DRUGS to fund themselves, aren't they the bigger burden than some evil little drug dealer in Hialeah? Isn't the executive branch AND our Judicial brance of govt. the BIGGER burden to all of us, when they go UNConstitutional 7 UNBiblical? That's like saying "WHY get CB's or 100mw WT's? It may lead them to BIGGER radios, Galaxies & BIG linikers @ the shootouts!" I started out in CB small, and don't ever plan to go to a shootout OR have thousands of watts AM from my moebeel ! You leave NO room for GOD to change someone and unrealistically think that because YOU believe that there is NO God, then the worst will happen. I look for EElian to be mayor of Miami or LEADER of CUBA someday! Then what will your perverted psychological nonsencicle minds think then? Time to repent NOW of your evil thinkings of "what might happen." Anglo Dave!!!!!!!!!!

As his father you should have that choice, but if you wanted him to return with you, as his father you should also have that choice.

> The
> Cubans are rioting because they know what kind of life the little boy now
has
> ahead of him.

This seems to be the way, in particular among minority groups, if things don't go they way they wish, then riot and destroy everything. Who says his life in Cuba is going to be some kind of hell? Yes, he probably would have better opportunities in the US if he stays here, and chooses to take those opportunities, but growing up in Cuba Miami, he also has just as good a chance of winding up in a gang, learning all about the improper use of knives and guns, stealing cars, and dealing in drugs and being another burden on our society.

Yeah, Tim, BUT.....what are the "odds" if you become one of those five? No flame, just a question. I listen up there sometimes just to see what's goin' on. On 27.555 I have heard some of the filthiest talk I have ever heard. That, too, makes me wonder what's the attraction when there is a legal alternative. No flame there, either. For the freebander, what happens when the band goes out and there's no "skip"? Does he wait for it to return, or might he be tempted to move down to 12 meters, or a little above? Would he move on down to 20 meters hoping he won't get caught? And, I suspect that YOU suspect the hams would turn him in, or file complaints with FCC, and---------you're RIGHT! They would. I just can't understand the risk in it, or rather, I'm not willing to TAKE the risk. I can do everything the freebanders do on other frequencies, and not worry at all about Riley Hollingsworth as long as I abide by the rules......and STILL have loads of fun. All us "old" hams are not 80 yr. old, either! Women still turn me on, and I'm still young to do something about it, too! LOL!

Best 73

Jerry

Boy, you are BEYOND IGNORANCE! No we is Husband & Wife. YOU are perverted & wicked for even thinking such a thing. Anglo Saxons (Pilgrims & Puritans) got the country because of the SINS of the Indians (violations of God's Laws--10 Commandments). and NO we didn't STEAL Texas from Mexico. The Brittish STARTED South Africa & now Communist Mandela is pillaging it! The only pattern I see is that your brain is washed by nonsence! SINful people have been opressing people for centuries, even now. it has nothing to do whether they are white! Communism was started by the Rev. 2:9 & 3:9 people. The Communist in the US are called Democrat Communists & Republican Communists. Both offer thesis & antithesis to make you go to the synthesis! (all because of your SINS!). the country was founded on GOD'S LAWS and was a Christian Republic, so that's what I said 'Eeelian should stay!!!!!" Dave!!!!!!!!!!!!!!!!!!!

Chris wrote in message <22344-390229AF-30@storefull-215.iap.bryant.webtv.net>...
Dave and Debby, you must be incestuous brother/sister. We are all immigrants in this country, unless your indian. Anglo Saxons stole this country remember? Then the Anglos stole Texas from Mexico while the British (also Anglo) were pillaging South Africa... See a pattern forming here Dave/Debby??? White people have been oppressing minority civilizations for thousands of years. And yes, communism was started by you guessed it ANGLO SAXONS.... Here in the US communists are called REPUBLICANS like BUSH, BUCHANON, and JACK KEMP!!!! This country was founded on freedom so let ELLIAN STAY JACK ASS!!!

Donnie:
You seem to forget that he CAME HERE with his DIVORCED mother. SHE DIED getting him here. SHE HAD custody of HIM ! Does that mean anything to you? I guess Jesus death probably means nothing to you too. He came here on DAS BOAT. Can't he apply for assylum like the mig fighter pilots did in the past? what is the definition of "political?' It is how many "benefits" can you give to what people, to keep them voting for you, while stealing from others! He was NOT "kidnapped" by his US family. Do you KNOW how stupid this sounds? His dad has pressure on him from commie Castro in that the grannies & other Cuban family members will be KILLED IF he don't come back! Why don't you GO to CUBA & see how "disgraceful" YOU can be in your position!!!! His family here is trying to be American. ARe YOU an American? STAND UP ! So he needs a GREEN card. Give him one!!!!! He'll be a CB radio customer later!

3010. FA: MIDLAND 79-290

Newsgroup: rec.radio.cb
Date: 2000-04-23 00:00:00 UTC
From: IBM233@webtv.net
Message-ID: <29487-39035CDA-55@storefull-211.iap.bryant.webtv.net>
Source record: 32460

I'm selling a Midland 79-290 on Yahoo. I'm asking $120.00 for it and will ship it for free to anyone from the NG. To see the radio please go to:

http://page.auctions.yahoo.com/show/amgr?aID=23858307&u=

3011. Re: Vertical antenna help please

Newsgroup: rec.radio.cb
Date: 2000-04-23 00:00:00 UTC
From: mickey <mickeyNOmiSPAM@mickeys.co.uk.invalid>
Message-ID: <2ad46262.5af1d1d6@usw-ex0105-037.remarq.com>
Source record: 32461

Thanks for your help Doc. No we cannot use beams unless you are
a ham and anyway they would stand out like a sore thumb in
London. That would almost certainly lead to trouble with the
radio police. Phased antenna I am almost certain is NOT allowed,
however that would be easy to disguise. Say I had two Solercon
IMAX 2000 phased how far apart would I need to have the antenna
and what sort of improvement in the reception signal/transmition
gain would I expect to get?

Many thanks
Mickey

3012. Cobra 148 GTL ST

Newsgroup: rec.radio.cb
Date: 2000-04-23 00:00:00 UTC
From: rgray@kc.rr.com
Message-ID: <MsJM4.2258$3f2.21461@typhoon2.kc.rr.com>
Source record: 32462

Can the 148 GTL with sound tracker be modded? Like upper channels added clarifier slides and power increase? NOT that I would do that might you as a zillion people would say this is illegal!!!

73's

Ron

3013. FS: (2) Sigma IV "toilet bowl" antennas, (1) AS "J-Pole", (1) light tower. masts, guy hdwe

Newsgroup: rec.radio.cb
Date: 2000-04-23 00:00:00 UTC
From: Jon <toomuchstuff@pobox.com>
Message-ID: <dtJM4.62575$y4.2076165@newsread1.prod.itd.earthlink.net>
Source record: 32463
Cross-posted to: alt.radio.cb.skip,rec.radio.cb

One heavy-duty imitation Sigma IV, with extended overlaps in mast and custom cap feed. Much heavier duty than the original- good in high winds. Used but excellent cond. $100.00

One real, original AS Sigma IV, brand new! $150.00

One original AS J-Pole 10 meter antenna lengthened to 11 meter. The J-Pole is a very trim, very good antenna. Slightly narrow-banded, has 3 db more effective signal at same range than even a Sigma IV. New cond. $100.00

The Sigma IV was a better antenna than the Penetrator or the Sigma 5/8 ground plane. It uses a a 3/4 wave radiator. The J-Pole is also 3/4 wave but is very trim because it has no ground plane radials or shaping ring.

(1) trim, light-duty 20' 2-piece fixed tower, perfect for CB antennas. 6"/side triangular construction. $50.00

Several heavy-duty push-up masts and hdwe. $50.00 takes it all.

Lots of heavy aircraft-cable guy wire, insulators, hdwe from a double-guyed 45' antenna. $40.00

Respond: toomuchstuff@pobox.com

3014. Re: Another SWR question....

Newsgroup: rec.radio.cb
Date: 2000-04-23 00:00:00 UTC

Source record: 32464

ok.. I tried a short(2') 8ga multi stranted wire with a real good
connection to the body and the SWR short up... I disconnected the mount
from any grounding other than the coax, and my SWR dropped down to about
1.1
WHY ????

3016. Re: 1/4 wave whip is great but...

Newsgroup: rec.radio.cb
Date: 2000-04-23 00:00:00 UTC
From: Jon <toomuchstuff@pobox.com>
Message-ID: <JFJM4.62632$y4.2077017@newsread1.prod.itd.earthlink.net>
Source record: 32466

I believe the Francis is either 5/8 or 3/4 wave. The 4 wires are wound around the whip. A Francis will smoke a 1/4 wave whip.
No attachments are necessary. Only the old Audio-King or maybe the modern Penetrators beat a Francis for effective radiated signal, but the AK, at least, has a markedly superior signal-to-noise ratio for receiving. Only problem with a Francis is the variable signal strength from its motion while driving. They didn't have the big Penetrators when I quit CB.

Regards,
An old-time ex-terrorizer from Ch4 in the SFV.

Thankx for the help. As nice as the expo kits are, I was hoping to get a channel99 kit. Apparently these don't exist at all anymore, for some reason... at least neither I nor anyone else who posts here can find some place that offers them. If anyone does have a source for these anywhere, let me know... in the meantime I'll look into other options.

Tinkertrain, "558 in the Empire state"

(Prepering To get flamed down from all directions)
INSENTIVE 1: I have never heard any filth on the freebands(other than from the US) and I have heard Stations from all over the world from Australia To Russia. I have had great QSO`s lasting in excess of 2 hours in some cases(when conditions permit) without even mild profanity. The legal alternative is so full of filth that I cant even turn the radio on when my kid is about.

That, too, makes me wonder what's the attraction
> when there is a legal alternative. No flame there, either. For the
> freebander, what happens when the band goes out and there's no "skip"?

Hippie-Crit Donnie:
There IS a difference between France & Cuba. france is Socialist; Cuba is COMMUNIST! To say I am a hippy-Crit because I believe there would be a difference, because the countries are different, shows that YOU must be the HIPPY-CRIT ! All Communists are name callers. Do you mean that ALL countries have been taken over by communism, and that i am a Hippy-Crit for thinking otherwise? My neck may be growing redder every day, but better DEAD than RED (Cuba). IF I had a son, I would say GO & live in the Protestant Country (USA) because it has MORE liberty & freedom than a non or Communist country. That's what the Europeans said & did when they came here. What is his dad's problem? Bullying by adolph Castro, that's what!
Anglo CB Dave!!!!!!!!!!!!!!!!!!!!!

The broad SWR curve is caused by losses in the coils. PVC is one of the worst
things you can wind a coil on.

Yeah I went to the Cleveland AES in person to look at 2 meter rigs.
The guy who "waited" on me was a jerk. He did not
answer specific questions, constantly contradicted himself, and was
generally not much help. When I left (w/o buying anything) the guy
gave me his card, turned out he was the manager!

You can always tell when someone is losing the argument--they start with the name calling.Let's review. You said that Elian was an illegal alien because he came here by boat. I explained that he wasn't - that Cuban refugees are viewed differently by INS than , say, Haitians. You disagreed and quoted policy. I in turn noted the specific act and cc'ed it here for you to read, and now, I'm the dumbass? Again, glad you aren't an immigration atorney.

She only had physical custody. Elians father has equal legal custody.
Elians mother was not trying to flee Cuba. She was non political. She
was on her way over here to be with her boyfriend. She put her son in
peril by trying to be with her boyfriend. Hardly a heroic act. It
could even be considered parental neglect.

Get your facts straight.

Elians mom only had physical custody. Elians father has equal legal
custody. Elians mother was not trying to flee Cuba. She was non
political. She was on her way over here to be with her boyfriend. She
put her son in peril by trying to be with her boyfriend. Hardly a
heroic act. It could even be considered parental neglect.

>Eeelian chose to STAY HERE in his video saying he don't want to go back!

This video is proof of parental or in this case kidnaper neglect. You
never influence or put a child in a circumstance to make a decision
like this. This act alone will cause more psychological harm than
being physically removed from the house. Additionally since when does
a six year old speak for himself?

>Cuba is an incredible SLAVE state. I read an article that people are taxed
>over 90% there! So if you want him to go back, you isn't an American and I
>would suggest that YOU carry him with his pinko brainwashed (maybe bullied

>escaped slaves. I know that he will never have A CB radio, which is good,
>since I don't promote CB's anyway. I just want to be a good old "American"
>commie and bring this bad slave back that cause you all so much trouble!!!!!
>Anglo Dave!!!!!!!!!!!!!!!!!

i don't disagree with you here but it doesn't mean people can't be
happy in Cuba and it doesn't mean we can trample legally or morally
on parental rights.

That may be (the losses), but I talk rather well on that antenna. My friends in San Diego from when I was in the service and I chat nearly every day, on 12 watts, almost no matter where I am in the country that day

If you can suggest a better material for the coils, I'd love to hear about it.

Thanks in advance.

-CGP

Sorry to ask a possible dumb question, but I have what appears to be a T.V. antenna attached to my house that is not connected to anything(besides that I have cable) and I was wondering if it would work as a base antenna. So 1) Will it work? 2) How would I go about making it work? (adding a connector to it) 3) Is there anything about using this (if it would work) that I need to pay attention to. Here is the URL of the pictures of the antenna. http://msnhomepages.talkcity.com/DownsizeDr/dragon44/Antenna.html

Thank you as always for sharing the knowledge.

Pretty much the length of each element... If you tried to use one like that (only if it would work, which it wont) it would be directional.

Chris

Source record: 32502

ok maverick, the length of the elements determines the freq. at
which it will operate..I sure if you hooked the cb cable to it ,
it would hear some stuff.....but trying to transmit on it would
be a desaster, and could do some major damage to your radio...by
the way you hook the wires to them two rusty bolts near the
boom....use a 300 ohm transformer to match it to your coax.....a
beam like that to work on the cb band would have elements 9 ft.
long sticking out each side of the boom and the elements ould be
3 or 4 ft. apart....I think I counted 17 elements on that
antenna so as you can see, it would have to be very long.....
(hellofa antenna) ha ha

Here's another place to look at 11m antennas:
This is an excellent site.

http://members.tripod.com/~cb_antennas/index.shtml

I hope this helps, Omar.

From the e-mails I receive...you're RIGHT! I've signed-up about 30 new A.E. members within the last two months! And you would be surprised at the questions I get from people on this NG who feel embarrassed to post a "stupid" question in this public forum. But of course to preserve their 'status' on this NG, I won't name names.

Source record: 32509

I'am looking into buying a radio and need to know what to look for. I have been shopping on the internet auctions and am not sure what to look for. I don't know what it means to have a radio tweeked, peaked, and tuned.

I have always use what ever radio that was in whatever truck that I drove, but am looking to get my own radio and would really like to get the best that I can poosibly get for a descent price.

Any help that I can get on models and modifications would be appreciated

3060. Re: Base antenna question

Newsgroup: rec.radio.cb
Date: 2000-04-23 00:00:00 UTC
From: John LeMay <jlemay@nospam.njmc.com>
Message-ID: <8e0add$n2p$1@news.monmouth.com>
Source record: 32510

Wow.

Where do I start? I want to help, I really do. I also want to keep this kind of simple...

OK, all radio signals (including TV) are measured by their frequency. The frequency of a signal is a measurement of the number of complete radio waves to pass a static point per second. A frequency of 1 MHz (mega-hertz) indicates one million waves per second. A frequency of 2 MHz would indicate two million waves per second. Since radio waves travel at a constant speed
(discounting the medium through which they travel for our purposes), we can determine that a radio wave with a frequency of
2 MHz is one-half the length of a 1 MHz wave.

For an antenna to efficiently receive a radio signal, the antenna elements must be cut to some fraction of the total wavelength of the desired signal. Common fractions for HF antenna elements (below 30 MHz, for our purposes, and therefore including CB which covers the 26.965 - 27.405 MHz range) include 1/4, 1/2, and 5/8 wavelength. We can determine the actual length of each element with the formula:

Length (in ft) = 492 / frequency (in MHz)

Therefore, a full-wavelength antenna for the middle of the CB band at 27.205 (again, close enough here) would be:

x = 492 / 27.205

...or, 18.085 ft. Since an 18' antenna is not very practical, especially in mobile installations, you can see why people
commonly use the 1/2, 1/4, and 5/8's wavelength antennas.

Radio signals used for transmission of television programming are of a much higher frequency. One can see by examining the above equasion that frequency and antenna length are inversely proportional, therefore as the frequency increases, the length of the antenna will decrease. Therefore, the elements on a TV antenna would be much too short to be used efficiently for CB radio.

One last difference, television signals are HORIZONTALLY polarized. CB signals are typically VERTICALLY polarized. Even if the elements were the proper length, the antenna would need to be rotated 90 degrees so that the elements were vertically polarized in order to work efficiently in the CB band.

Yes, you should read up a bit. Not only on antenna fundamentals, but also
on general radio principals.

Hey, don't dump this attitude on me - as a ham operator, I have never put down CBers. Heck, I've been a CBer myself for more than twenty years.

However, if you want my opinion as a Cber, I'd say that we fall into the "worse than pond scum" category (and I speak from experience - I have a pond less than twelve feet from my back door).

Speaking of that pond (water of any kind always brings up the topic of fishing), I use the excess from my guy wire for fishing line, and the top two sections of an old A-99 for a pole - don't catch much fish, but I've dragged some mighty big turtles out of the pond with that setup.

How do I go about finding out if there is a DX club in my area?

What are some of the advantages of joining such a club? Is it so
you can QSL each other?

For example if I work an "American Eagle xxx" station can I go to
a site and find out who American Eagle xxx is and how to QSL him?

How do you go about getting QSL cards to each other since you
obviously don't want to give your address out over the air.

Hams have their call book....what do CBers do?

They knuckle under a little bit and get their Ham Radio License. Not only do they get worldwide communications on a daily basis but they remove themselves from the criminal world of freebanding and the possible negative consequences.

Not So! Double check, I think your formula is for a half wavelength,
not a full wavelength. Full wave length is 984/ frequency in MHZ; this
would make a full wavelength CB antenna 36.17' in length.

especially

3073. Question for Hams

Newsgroup: rec.radio.cb
Date: 2000-04-23 00:00:00 UTC
From: andres <aortiz@mail.com>
Message-ID: <sg7ff01tcdo142@corp.supernews.com>
Source record: 32523

Can I take all exams on the same day and go right to extra class? I currently have a Radio Telephone Operators Licence form the FCC and I have studied morse and can easily pass the 5 wpm. The theory exams are no problem either.

Thanks
Andres

3074. Icom 751

> told you. if you think communism is all
> nice and they live great, <snip>

I never said that "communism is all nice," Tim. And I never said that "they live great." You're trying to twist my words again. I simply said that the standard of living is not as bad as suggested in an earlier message.

> <snip> for you to say its nonsense about
> kids working in the fields you really
> show your ignorance in a big way <snip>

Okay, Tim, I'll spell this out for you so there is no misunderstanding. A previous message stated that children are "shipped off to work in the sugar cane fields or the tobacco fields in forced labor where the parents arent even allowed to see the child except once a month or so." I responded that this was "absolute nonsense."

Oh, I'm sure there are children working on farms throughout Cuba - farms that belong to their parents or neighbors. But, there is no forced child labor program in Cuba (set up by the government or anyone else). And, as I said before, I have friends who travel to cuba all the time that will verify this.

> <snip> just listen to radio havana cuba
> and youll here the government propaganda,
> some of its so obvious its funny to
> listen too. <snip>

Ever listened to the Voice of America - our governement financed international radio system? The broadcasts from VOA are filled with propaganda. Why hold the Cuban government, and its radio broadcasts, to a higher standard than you hold our own government and its radio broadcasts?

More importantly, the people are not less free just because a international radio broadcast by the government is filled with propaganda. If that were the case, then we would have absolutely no freedom here considering the propaganda in our government's broadcasts. In other words, what does the broadcasts of Radio Cuba have to do with how the people live in Cuba?

> <snip> dwight, are you a communist? <snip>

Why is it when anyone speaks up to dispute obvious misinformation, they are immediately branded a communist (or whatever)? We have people in this country who talk about the great freedoms in this country, and critize the supposed lack of freedom in other countries, and then jump up to immediately attack the character of anyone who speaks up to challenge the rhetoric. We don't need government censorship in this country - we have ordinary citizens who are more than willing to do that job without the aid of government.

In other words, Tim, if you don't like what I have said, then dispute what I have said. But don't question my loyalty to this country in an effort to force me to agree with what you have said.

Maveric169,
Unfortunately, no, it won't work. This antenna looks
like it's for the UHF range. Antennas are a particular
length depending on the frequency they will be used on.
Most antennas are based on multiples of a 1/4 wave length
of the frequency. Every frequency has a length. This
length is based on how long one complete cycle is. This
is called that frequency's 'wave length', and can be measured
in feet and inches. To find the 'wave' length for a particular
frequency (actually 25% of it, or 1/4 wave length), divide
246 by the frequency in Mhz. The answer is in feet.
Your antenna looks like it might be about a foot from
one side to the other (SWAG). So half of that would be
6" and 1/4 wave length. 246 / .5ft = 495 Mhz (give ot
take a bit). Quite a 'ways' off from CB frequencies (27 Mhz).
'Doc
PS - Aren't you glad you didn't ask me what time it was? I'd
still be making that watch!

BBL1B,
You might look at the bumper mount from Radio Shack.
Not a 'strap', it uses two chains. Only one that makes
a 'strap' mount, (that I know of), is Kenwood, I don't
think you want that one (difficult to use, and depends
on the shape of the bumper)! You can buy lots of 'RS'
bumper mounts for the same price.

andres,
Not a bad price depending on which model it is, and
what shape it's in. Is it the '751 or the '751A? Does
it have the internal power supply? Any optional filters?
A very good shape IC-751 / IC-751A is going for between
$400.00 and $600.00. So, if it 'works', you didn't get
hurt.

Ken,
The short answer is, not really. The long answer is,
that you can probably 'juggle' the length of the radials
by a very small percentage. Changing radial length will
'de-tune', or change the resonant freqeuncy of the antenna
and necessitate re-tuning. If you want to 'play' with
changing lengths, why not?

The pictures suggest it is an antenna for a much higher frequency,
likely in the vhf/uhf spectrum. No, it isn't likely to work on 11
meters, but you could take the aluminum and fabricate something...

From: CodysPC@Iserve.Net
Message-ID: <390397ac.30994378@news.iserv.net>
Source record: 32542

Greetings!

Lets take a step by step approach...

The mount is important in any antenna system.
I'm curious about the connections being made to the coax at this
mount.

You mention an SWR of 3.5 at this location, with it being this high,
better check some simple stuff - for locations like yours, an antenna
may reflect an SWR of 1.7 - not bad - but your's we need to look into
how it's all put together.

The Mount...Is it;
An SO-239 to 3/8"-24 thread stud adapter?
Or are you using spade lugs to make this connection?

There are problems in high SWR cases where the mount itself may be the
problem! Pretty much all 1/4 wave whip designs - the mount center stud
is insulated from ground, and should only show a dead short between
the center of the coax connector at the radio side, and the center
stud of the mount. It should never show a short between ground and
shield when the coax is disconnected from the radio.

Example:

Radio end Mount->|---,
-[]==============coax================_____ |
^----check center to center-----------------'
. and shield to shield.

Do the same for the ground side, only insuring that the shield of the
coax connector on the radio end, is showing nearly, if not at, a dead
short to the battery negative ground terminal.

If both readings are a dead short, shield to negative of
battery terminal, and dead short from center to center,
AND NOT a dead short from shield to center, we should
have a pretty good connection that is reliable enough to
make this system work.

Once the above is verified and all connections are good, there are
only some other simple possiblities that are causing your problem.

Check to make sure you are using RG-58, RG-8x or RG-8 style of 50 ohm
impedance coax, and that the connections are as watertight as
possible. IF the coax is old, don't trust it, get fresh new stuff and
you might want to get a SO-239 to 3/8"-24 threaded stud adapter to go

into the mount, and those nylon washers go on top of the mount, and
underneath the nut that holds it to the mount, to keep the center stud
from shorting to ground here.

Cab and bed frames are at different levels of height, so the antenna
will send energy that wants to reflect back from it's proximity to the
cab.

Basically, it's too close to the cab and due to height,
signals are reflecting off the metal of the cab, and bouncing
back to the antenna causing the SWR problem. Solution is to
re-locate the antenna to a different spot.

You mentioned the bumper, not the best location due to what
the antenna has to work with and the antennas own radiation
pattern is highly directional when mounted there.

I'd recommend using the cab as the utmost height and signal
radiation point and mount it there, and be done with it.

Dont' try to sacrifice a performance hit of reflective signals
that can't radiate past the cab if you try and keep it on the
truck bed.

The Mount and it's connections may be bad, replace the mount with a
new one is the most likely culprit.

On Sat, 22 Apr 2000 20:12:33 GMT, while the modem was pondering it's
navel, Anonymous@airmobile.com (Anonymous) dissertated the following:

>I've got a 2000 Ranger with a Grant LT, 102" steel whip, 18ft. coax and a
>firestick mount. The mount has four holes drilled into the bed near the
>cab. There is a bedliner between the mount and the bed. I am getting a

If it is a tv antenna, there is no way you could use it for cb, the antenna
is designed for VHF and UHF freq.'s that range from 71.75-500MHz.

Go here for some very good information.

http://www.arrl.org/tis/info/yagi-hf.html

Even though it is for Ham Radio you can apply to 11 mtrs as well. I
have forgotten the length of wave in the 11 mtr band and will not attempt to
guess...been TOO long since I was in CB's....however I just bought a mobile
rig and getting back into it full bore :)

Going from a bolted down mount with a direct electrical connection to ground to a mag mount tends to electrically shorten the antenna by placing capacitive reactance in series with the antenna. Lengthening the antenna should solve the problem

I am looking for a strong strap on style bumper mount for my car. It has metal bumpers and I am planning on putting on a 7-foot Firestik. I have used this antenna in the past and had great luck with it. I have also used other antennas including K40 and Wilson. Anyone have any suggestions,,,on the mount, not the antenna. Thanks in advance.

This paragraph is almost too rediculous to comment on. Yea the cubans dont
feel oppressed----- right. Thats why thousands have risked death to come
here
from their "island paradise". Very few live in poverty huh, try living on
the average wage of 2-4bucks a month.

country-side.

No this is not absolute nonsense it is a fact. A child in cuba is considered
property of the state and they are forced into state labor. Your friends are
no doubt students travelling to cuba on student visa's. They only get shown
what
the govt wants them to see. Your "friends" havent lived their since birth to
form
a "qualified opinion" . A coworker of mine is married to a cuban, talk to
her sometime, and youll get a totally different picture than what you are
trying to form.

There is of course one big difference in this case the kids have no say so
because its forced on them, in case you havent noticed we've had a volutary
draft for many years.

Source record: 32567

It isn't normal. Are you sure you aren't seeing the tube flouresce? This isn't abnormal, it's not that common, but it isn't necessarily a sign of a shitty tube. NOS tubes often take a while to come up to peak performance - sometimes a couple of days. I usually go easy on -new- tubes and repeatedly check the bias set over a couple of days. You can tell a gassy tube 'cuz the -getter- spray won't be shiny silver any more - or it'll be burnt away. 811 tubes, and others, have no getter and rely on running the tube super hot to burn off impurities. If these are gassy they'll arc over and basically have crappy gain. If they are constantly run too -cool- they will deteriorate unti they are run super-hot again.

: For a antenna to perform at maximum and have the lowest
: angle of radiation the voltage at the antenna should be 0
: volts and the current at maximum. This is determined by coax
: length, half or full wave length. Sure some see a SWR
: difference but that is because the antenna is not resonant.

This is all misinformatiion.

Coax length has nothing to do with the voltage/current distributions in
an antenna.

Resonance and lowest SWR do not necessarily occur at the same frequency.

BB runs just about everything...you will find the biasing in the base models of x-force..the mobile models dont have biasing..there are a couple of very minor things different about x-force. Dave has got a damn good amplifier there is no doubt. I just dont see why everyone gets so hyper about another amp that is like it. If its a good design then guess what...now there are two. Look at cola...you have got all kinds of cola makers...pepsi, coke, RC..etc etc....see what im sayin?....

Yes, you can take all the examinations at the same time - if the examiners
are prepared with the proper elements. That means you can get your Extra
Class license in one sitting. That is what I plan to do.

: WHY ????

It could be that your antenna is not tuned - so the coax is acting as
part of the antenna.

It is impossible to diagnose the problem for sure without actually
seeing it. All we can do is guess at the possible causes.

If that is true, then you either do not really understand the theory,
or you are making errors in your measurements/testing.

Transmission theory explains how transmission lines and antennas work.
Such theory covers both the ideal situations as well as real live types
of systems.

>device (two metal balls on rods at the base of the tower closely spaced
>together or in some cases a spark plug!) so dont expect your rig to last
>thru an electrical storm.
You're probably right about placing a proper CB antenna on top of the
tower.

Regards towers, I think that in recent years there is a move to ground
towers especially if the AM station in question is not able to put a
full 90 degree or 1/4 wave tower up. The use of the folded-monopole
concept for short towers is very popular. This design also offers
improved bandwidth which of course is much needed to offer good audio
quality.

Shame NRSC was introduced!

Phil / UK

Where did I say that "Resonance and lowest SWR do not
necessarily occur at the same frequency". All I was talking
about was voltage / current phase and antenna efficiency.

>Sure some see a SWR
> : difference but that is because the antenna is not resonant.

The key word here is "difference"... coax length does now
always effect the SWR on a resonant antenna. May be my
wording was not clear but I thought the word "difference"
was the clarifying word of the topic.
Cheers,
John

Bill we are getting a little nit picking here!

I have 10 years in CB, 7 years as CATV head tech, and 4
years as Office Machine tech. And in all cases I have seen
theories printed in books in direct contradiction of what
the expectations was and was suppose to be, the cause and
the remedy. Theory is nothing more than a tool or aid to
help one do his job, but I would not bet my life on it!!!
Cheers,
John

John;
What experience do you have that shows that changing the length
of the coax changes the Current/Voltage distributions in an antenna?
What did you use to measure this change?

Source record: 32608

I built a 1/4 wave ground plane base antenna with the vertical element at approx 9' and the 3 radials at the same length. It works very well but I was wondering if I could shorten the radials to a divisible length of the center element without sacrificing performance. If so what length?
Thanks,
Ken

i've never seen a "kit" for them but i have known techs that use a 99 channels selector. it seemed fairly easy to replace the 40 channel with a 99 channel one. the only problem is the it takes you above channel 40 where there is all ssb is and it sounds like you guys are wanting good old am converstations. go with the expo kit and sit some where below 1and you wont be bothering other people or getting bothered nearly as much

Thumbs up to janet reno for enforcing the law. Should have been done months ago. The boy IS an illegal alien so there are no rights for him. He was used as a pawn by his low life relatives to make a buck and to show a political statement against castro. If the group of cubans down there don't like castro, they need to take there chicken sh*t ass and go back and fight from freedom instead of running to america and whining. I think its time to deport the uncle and the girl and show america does not stand for this crap. Let castro have some fun with those two low lifes and set an example.

hi red wire,

the best dx groups are the ones that have lots members and are represented world wide. some of these groups require you to have a certain amount of worked and confirmed dxcc countries before you can join and some dont. it just depends on what group your looking at. all of the serious dx groups are on the USB above 27405. there are some like the American Eagles you here about but there not really dx groups because they run lsb and talk to mostly others here in america. the USB guys are mostly looking for international contatcs world wide. the first thing you should do is decide if your going to be going after world wide stuff or mostly tuff here in america.

if your looking for world wide dx contatcs then i would suggest you take a look at http://home.wxs.nl/~19ir01 this is the HQ site to the second or third largest group. we have members world wide and offer lots of services to our members including a huge directory with the info of all members listed and the www.dxnews.de web site and lots and lots of printed materials.

also see the sites in my signature. be sure to pick a group and stay with it. nobody will ever be able tog et to know you if you change callsigns alot.

tell that to the people around the world that have been convicted, in america your statement is true, but what about the people we know in england, france and other places like that? dont be ignorant and risk other people just so you can support your position in this thread. i personally know people that have had there radios confiscated in the UK for 11 meter dx'ing, ask phil in the UK. other places, it may not be jail but it is expensive to pay fines and replace radios. leave all callsigns off of the outside of the envelopes. the people you are sending to realize they talk on the radio, they dont need your callsign on the envelope to remind them. some dx'ers wont even reply to envelopes with callsigns on them (me included), its just a sign to throw the envelope away before ever opening it.

>Thanks,
>Ken

Hi Ken,

I'd suggest leaving well-enough alone. The "ideal" 1/4 wave GP, cut for
the center of the CB range (27.185 MHz) would have a vertical radiator
103.4" in length, along with four radials, drooped at a 45 degree angle
from horizontal, 5 percent longer than the radiating element (which would
make them each 108.6" in length). Drooping the radials at a 45 degree
angle provides a near-perfect match for 50 Ohm coaxial cable. If the
radials are horzontal, a matching device, such as a Beta match, would
be needed to provide a good match.

what in the world makes you think I want just AM chat? For a Washington base? that's a SSB machine... I used to love the nightly gathering in my area on channel 65, not to mention the DX. This may be something I want my wife to be able to use, it doesn't mean I want a 2-channel GE walkie-talkie! ...and I've seen at least 3 different radios, all president bases, with the channel 99 kit. All done with a kit, not by a tech as a project. And here in my town, I think I have a right to chat wherever I choose on my own radio.. so, no offense intended, but all you folks who are telling me to do this, that, the other thing, and stay on certain channels.. I've been in radios for years, and my only question was about a conversion kit that aparently no one here has heard of!
'nuff said. I'll ask my techs around here about the kit.

sorry i made an assumption. just figured if your wife didnt want to deal with a easy to work expo kit as aposed to a 99 channel selector then she surely wouldnt want to fool with a clarifier or ssb use either. maybe you should ask your tech that you seen with the 99 channels to do your radio too then. and your right you can use your radio where ever you would like, we can only expect a gentleman to follow the gentlemans agreements, if your not one it doesnt apply to you.

>

The length of the coax has no effect on the current/voltage at the feedpoint of the antenna. If you feed a half-wave dipole at the center, the current is max and the voltage is min at the feedpoint, coax length dosen't matter. If you operate that same antenna on the third harmonic of the fundamental (which makes the antenna a 2/3 wave-length), the voltage at the feedpoint will be max and the current min, the length of the coax having nothing to do with it.

You can cut them back to 1/4 wave which is approx. 103 inches for cb. This is ONLY an estemate. There are variables such as the material that you make the radials from and the diameter of that material.
Being that your antenna is homebrew, you might want to start a little long, (maybe 110"), and prune for best S.W.R.
I used to live in a deed restricted area and built a 1/4 wave G.P. where I used a 102" whip and 4 102" wires for the ground plane hidden in a tree with excellent results. If you used tubing for your vertical along with the fact that it is 9' long, (theoretically too long), I'm not sure if the ground plane radials would need to also be longer.
Good luck.
Jeff

Did you install the plastic washer in the hole of the mount? If not your antenna is touching and causeing a high swr reading. As long as your mount is bolted to the bed of the truck you have a good ground.

You don't put any conditions on your question.
The furthest that I have ever talked under unusal conditions was from west central Florida to Montreal Canada while driving south using a stock TRC-473 and a trunk mount K-40 antenna on 27.355 SSB meaning, theoretically, that my strongest signal should be heading south.

The second most unusual time was from the same QTH to Atlanta Ga. using a stock TRC-222 walkie talkie connected to an experimental antenna which was 102 inches of wire, horizontal, 10" from the ground with the ground being a 3' stake pounded into wet ground connected to the shield of the coax.
In my opinion, these were both unusual conditions and was a suprise to me that I got as far as I did. I wasn't even trying.

Is he still here? Hams used to complain years ago about losing 11 meters to cb
because of it's skip potential.
If there was no skip on 11 meters, the FCC wouldn't have put the 155 mile limit
on it in the original rules.
Rumor has it that they are considering dropping that rule. I hope so.

You would have to change the varactor diode in the clarifier circuit for a larger value. I don't know what that value would be as I don't know what the original value of the diode in there.
The price is cind of high at $19.95 but copper electronics sells a replacment diode for this.
Phillips ECG has a small selection of varactors at about $2.00 each which would be a cheaper alternative if their values happen to fit your needs.
When you change out this diode, if it won't slide enough, try installing a 5 uH choke in series with with the diode. This will stretch it out a little more.
You want to stretch it out quite a bit and your stock control will probably be very touchy. If it is too touchy, you might consider installing a 10 turn pot in place of the stock control. You can also get these at Copper but they are also a little pricey. If you check with JDR microdivices or digi-key, you might get a better price.

http://www.jdr.com/interact/default.asp

http://www.digikey.com/

http://www.iglou.com/copper

Good luck.
Jeff

I had the same problem with my Dodge grand Caravan.
I connected my ground wire to one of the screws that mounts the roof rack to
the roof. I can't speak for Ford but in Dodge, the mounting screws go right
into the roof past the gasket with a good ground. I just have to check it from
time to time for a tight, clean connection due to weather.
Good luck.

You say that the A-99 is due for retirement while saying that it works great.
If your experience whit the 99 is the same as mine, you don't have to retire it
at all.
I have 2 99's cophased like twin truckers.
Here in Florida, the sun had beaten them to death in 5 years. They looked like
they grew hair.
I pulled them down and lightly sanded them and sprayed them with clear coat
spray laquer and put them back up.
They still work great. I have to do this about every 1 or 2 years as the sun
destroys the laquer in time.
CAUTION!!!
If this is your situation, when you pull them down, USE HEAVY GLOVES.
The first time I did this, I was bare handed and got tons of fiberglass in my
hands.

It drove my nuts to the point that I called the emergency room. They told me to wash my hands in peanut butter.
I thought they were crazy but was willing to try ANYTHING at this point.
I tried it and it worked on the first try. It took every bit of fiberglass out of my skin.
Good luck and be careful.
Jeff

a well maintained solid state amp will always stay good. i have had some for a few years with no trouble and some people for a lot longer, even a tube amp that is taken care of will last. i know a lot of people with heathkits that still have the origanal tubes with good output. people burn out amps by using either too high voltage, drive, or swr.

Nice of you to be on 65. I don't stray above 40. But if skip were
rolling to your house, and I did key up on AM, you wouldn't like it.

Get real,even with a full size 5/8 or 3/4 the difference would be very
small,you can keep your shorty antenna.

>
>
Testing with a President 2510, I had 2.0:1 or less from 26.000 to 28.500 and
under 3.0:1 up to 29.000.
Unless you're licensed for 10 meter ham, it is not advisable to go above 27.955
and in the U.S. it is illegal to go above 27.405.
I say this so I don't get blasted by the hams.
With that out of the way, it has been my experience that for SSB, mostly lower
SSB, the channels above 40 are usually busy and for AM and FM, the channels
below 1 are best. Be aware that this can vary by locality but this is my
observation in the southeastern U.S.
Have a good day.
Jeff

3227. President CB-SAT dish review...

Newsgroup: rec.radio.cb
Date: 2000-04-24 00:00:00 UTC
From: grtpmpkin32@aol.com
Message-ID: <20000424161756.10954.00001992@ng-cs1.aol.com>
Source record: 32677

I have just received and installed the President CB-SAT 'parabolic dish' antenna. Having put it through some paces, I'd like to give a little informal review and perhaps give some info to prospective users of this antenna.
First, the size. This dish measures 420mm (a little over 16 and a half inches) in diameter, and is encased in a molded grey plastic. The element is (as I can figure from the back) an extreme S-shape, which is molded into the plastic 'dish'.
Contrary to any manufacturers photos of the unit, there is no 'PRESIDENT' printed on it's face, anywhere, only a little white sticker on the very top rim stating to keep "this side up". This is generic quality is desirable (for reasons noted towards the end of this review).
The mounting system is quite simple, just a gimble on the back center, with all hardware included (a very simple friction plate/two bolts, etc.) and the SO239 connector in the dead center of the back. There is also a little black tab which is removable to reveal a trimmer capacitor for SWR fine adjustment. This is accomplished with a little plastic screwdriver that is supplied, of course. It turned out that this adjustment was quite necessary.
I attached my coax by way of a right-angle SO239-to-PL259 adaptor. Otherwise the coax would come away from the dish straight out, and place a lot of strain on the coax. Also, I covered the connection with CoaxSeal, to keep moisture out.
Attached to my Cobra 2000, this little guy did very well indeed. I used a switch to compare between a Solarcon A99 and the dish. The A99 is mounted with it's tip about 40 feet off the ground. The dish was mounted on the back deck, at a little under 20 feet above ground, in an upright, vertical position.
On receive, the dish was quite effective. The 2000's S-meter read a difference of only about one to two S-units, on average, in favor of the A99. No surprise there, but for something mounted at half the '99's height, pretty impressive. In fact, while noting only a slight decrease in signal strength when switching in the CB-SAT, there was a noticeable decrease in noise. Not across the entire 26 to 28 MHz range, but throughout most of the legal 40 channels. This antenna is not being sold as a noise-reducer, so I won't say that it is anything other than my location/conditions that can account for this discrepancy.
On transmit, I can only say I was very impressed. A friend about 18 miles northwest of my location was helping me test this dish, and he got another friend of his about 22 miles due east of me to also help.
They both reported fine, clean signals from the '99. When I switched in the CB-SAT, they each reported a 'minor' drop in signal strength, on the order of one S-unit on average, but similar testing on other freq's yielded some larger variations in drop. The biggest drop in TX strength was noted at lower portions of the band, where the friend due east noted a drop of almost three units, but the friend northwest did not notice that much of a difference. This is odd, since this is supposed to be an omnidirectional antenna.
At any rate, readability was never at issue. Even with the drops in signal

strength, the audio itself was clear and wide.
The Trimmer function was a little daunting at first, but was eventually rewarding. The initial SWR (out of the box) was a little over 3:1 over the majority of it's 26 to 28 MHz range. After a number of adjustments, it is now down to an even 1.5:1 across the whole range, though the higher freq's are closer to 1.9:1. Not a problem for me.
I then switched in a Wilson 1000 mounted at a similar height on the deck with a 4'x4' copper plate underneath for groundplane, and compared again.
SWR on the Wilson was a solid 1.3:1 across the whole range.
Both friends noted an increase in signal strength AND readability in favor of the CB-SAT. It also 'heard' better than the Wilson (which is a great antenna when I'm mobile, of course) all over the range. The average increase over the Wilson was near 2 S-units.
The specs indicate that this antenna is 50 ohms, and will handle power up to 100w. My Cobra surely does not even begin to push it's limits.
My final thoughts are basically that this dish is not quite as good as an 18 to 24 foot vertical, but not much 'worse' at that. It will perform better than a mobile antenna-as-a-base set-up, by a respectable margin, on both TX and RX.
Since this antenna is only 16 some-odd inches across, and looks so much like satellite TV dish (minus the probe/LNB) it seems to be an effective, affordable alternative for apartment CBers, and as a reliable second antenna for those who already use a fuller vertical antenna.
No ground is required, and since it has such a low profile, it can be used as a hidden or stealth antenna in almost any location, particularly now that apartments who condemn any type of CB or Amateur antenna must allow Satellite dishes if the tenants desire it. It is perfectly reasonable to pass it off as a dish antenna if your landlord doesn't look TOO closely! :-)
At a list price of $69.95, it is certainly within the wallet range of most CBers, and can provide VERY stable and effective communications when other antennas are impractical or impossible.
I'll keep my A99, of course, and use it as my main antenna. But knowing that I have a good performer on hand 'just in case' is reassuring.
Looks like a winner from President.
Thanks for reading, sorry if I took up so much space!
Linus
(P.S. The Obligatory Disclaimers apply. I have no affiliation with President or any other manufacturer of radio-related equipment.)

This antenna will give the broadest range under a given SWR but this
varies with the installation so try it and tell us how yours does.

Hey neighbor, long time no talk.
I say they should trade Elian to us for Manuel Noriaga. We could get a kid who could be a productive member of our society in exchange for someone who could import drugs into Cuba and get everyone there stoned so we can go in and take over without fireing a shot.
As it is, we are paying Manuel's room and board and getting nothing in return.
:)

Thanks for the good advice. I will experiment with getting the antenna as far from the metal roof as I can. Probably won't try to tune it.

Charles.

Long DX on 11M is *all* propagation, folks. Has nothing to do with how big a "strap" you are, how loud your radio sounds, or how thick the loading coil of your antenna is.

>neither are and what I should do. Thanks !!
>
Unfortunatly, Both of your friends are right.
The first thing that I would check is the coax connections. Use an ohm meter
across the center pin to the side of the plug to look for shorts. There should
be NO continuity here.
Next, check from the center pin of the plug to the threads where the antenna
screws into the mount. There SHOULD be continuity here.
Then check from the side of the plug to a bare piece of metal on the truck
body. Again there SHOULD be continuity here also. If there is no continuity
here, this is your problem and, if you wish, try the suggestions below. If
there are problems with the other two tests above, solve these first and check
your S.W.R. again before going any farther. You may not have to go to the
trouble.
If it is the mount ground, what you could do, if you can reach it, would be to
clean the paint off from the back of the bed where the nuts are that is holding
the mount to the bed then take a piece of heavy braided wire, like the braided
shield from a piece of RG-8/U coax and ground the bed to the frame. Most pick
up's have rubber shock mounts between the bed and frame for mechanical noise
supression, (rattle), which is good for your sanity but bad for an antenna
ground. Try to keep the ground braid as short as possible while, at the same
time allowing a little slack for the bed to move on the shock mounts without
pulling the ground loose.
This way, you won't have to cut a larger hole in your bed liner ot clean the
paint off from the outside of the bed.
AFTER you clean the paint from the metal by the mount nuts, reinstall the mount
with LOCK nuts as the movement of the bed liner will eventually work regular

nuts and washers loose with time. After you get it all back together, you could spray some primer or paint around the site where you removed the paint to prevent future rust.
Good luck.
Jeff

Either one, they are the same to me. I can't think of a single example of where theory and practice are not the same. When it does seem this way it is always because of a lack of understanding of what is happening. If you can truly demonstrate an exception to known physics I suggest you publish a paper on it and submit it to a major university. It should be worth a Phd, a lot of bucks and getting your name in history.

Hello everyone !!
I have been reading the newsgroup for a while now, and I am conssidering getting a new radio. My old Midland 77-115 is way too noisy. I wasnted something that would be useful if I do get a Ham license this summer. The two most mentioned are the RCI-2950 and the President Lincoln. The price difference is usually $50 in most places, and I just want to know which one is the best. I want something that doesn't take too much to modify to 11meters, (I know about he chipswitich for the Lincoln) has GOOD reception and overall solid radio. I'm willing to spend a bit more if I'm getting a much better radio.
Let me know what you al think, especially the people who have had both .. thanks !!

>

Just after last Christmas one of the neighborhood teenagers approached me wanting help with the antenna he had just mounted on the toolbox in the bed of his pickup. Antenna was a 7 fy firestick on a ball mount, SWR was over 3:1. First thing I did was to take the full length antenna off my truck and replaced his to no avail. I then started to inspect the coax to see if it was OK and when I started to disconnect it from the ball mount I saw the problem. The hole he drilled in the tool box was the same size as the hole in the insualor of the ball mount. He then put the shank of the ballmount through the insulator and the toolbox and put the nut on the inside of the tool box resulting in a direct short between ground and the antenna. This is not the first time I have seen this mistake either. Another similar mistake envolves the split insulatig groment on other mounts if these are installed wrong there will be a short. the obvious answer is to use an ohmmeter to check for the short.

3251. 2510 deal fell through

Where can I learn, basic, cold hard information about CB radios. I got inspired by the fact that there is a whole world out there talking, and talking, and talking on these radios.

Where are good places to buy them; is a hand-held one better than the ones you can have at your house? What is the best brand? What is the most ecomonical brand?

Answers would be greatly appreciated; thanks.

Greetings!

I didn't think that you realized what you stated.

That is my page you posted the link to.

And as a general overview, I don't quite understand where radiation angle has anything truly to do with SWR.

Radiation angle is determined with the electrical length of the antenna - physical length with no loading generates that efficiency.

It has it's own inherent impedance, but these are compensated for by using a matching network to make the antenna appear as a 50 ohm resonate antenna [in the CB world the 50 ohms is considered the correct impedance necessary to provide a low SWR and proper power transfer - the ideal 100% efficient standard.]

Loading the antenna to shorten it but provide electrical properties of that tuned length, reduces efficiency, but you gain some practicality of using the antenna to accomplish the task of getting out, being heard, and hearing others.

Since you quoted my page. I don not stand behind the issue of radiation angle pertaining to maxima and minima of waves on any antenna.

What I do stand behind, is the power transfer and losses can be extremely high in a connection, and if the antenna is non-resonate, aggravates the problem when working with any antenna that could be made resonate using a specific length of coax, only you really should make the antenna work with the counterpoise to form an image, not the coax taking up the chore of making the system appear resonate.

Regarding angle of radiation...
It is a physical length situation, which cannot be made up for by applying electrical length using a shorter radiator. You simply lose efficiency - but to compensate for that loss, some effects of the physical length can be obtained by loading the antenna to the length, but you cannot obtain the efficiency of the physical length, but you do get the electrical properties applying to the events occuring, but not the efficiency.

You quoted my page as saying the below, which I do not agree to or say to any effect of what you may claim to occur.

My opinions are based upon experience with what you're looking for.
Only I have to break it down for the casual user to get a grasp of the
simpler fundamentals.

Thats is why I posted the "Clarification". To post my views on
what is there on the page and to resolve any issues that
others may question you on, I don't want to be involved with
and if needed, only as a reference, which I'd be more than
happy to get beat up on, this is from my own experience...;-)

If they were to drop the 250km limit, then it wouldn't be lawless for those who stick with legal power. The ARRL just wants to hang on to the ham monopoly on DX.

Good point Martin but the ARRL and the FCC should both grow up and drop this
un-needed rule. Although you know that I sympathize with raising CB power
limits a bit, good long distance DX can be achieved with the existing power
limits. It is no more than QRP on the CB band. If people use power higher than
the limit, it would just make it easier for the FCC to find them and weed them
out.
Have a good day.
Jeff

What the hell does this have to do with the 250 km limit on the legal 40
channels???
It sounds like you just came here to gripe for the sake of griping.
Nobody was talking about illegal incursions into 10 meters in this thread.
Here we go again. I'M BAAAAACK!!!

don't turn up your dead key , a low dead key keep the amp running cool , and keep the stress on the pill's down , turn up the modulation , you can get 20 watts swing out of a 122 .

it the swing the drives the amp not the dead key

It only looks that way because all of the idiots on ham are spread out over a
lot of realestate where as we only have a comparatively small plot to pack our
idiots into. When you try to pack as many or more CB'ers than there are hams
into 400kHz, it's bound to spill into the out-bands. Thank God that it's mostly
quality people that spills over. I'm just sorry for the quality people that
stay in the CB band that has to put up with the real idiots.
Imagine if you took ALL of the licensed hams and confined them to just the
voice portion of the 10 meter band. There would bound to be an insurection and
incursions into what would become your out-bands and you couldn't convince
anyone here otherwise.

This newsgroup is a good place to start out, lots of knowlegeable people out here. Also, there are lots of websites to visit, http://www.dxzone.com/ has a lot of info to get you started. Generally, a base (a radio at your house) will do better than a mobile (one in your vehicle), and a mobile will do better than a hand-held, if you are concerned with getting the most range. But if you plan on using one for hiking or any outdoor activity, than a hand-held is better. All depends on what you want to use it for.

You might also want to consider amateur (ham) radio if you want to talk to the world, rather than just your local area. More frequencies, less noise and interference. Again, it all depends on what you want to do with your radio.

27.700 USB is great for Slow Scan Television and for PSK-31 if you like to use your computer with your radio. I'm in Texas, and have worked lots of Europeans using digital modes instead of voice. Most of the software you need is either shareware or freeware. As for hardware, all you need is a soundblaster compatible card.

Yes, SSTV is one of my favorite modes, especially because it is very easy to set up, just a soundblaster compatible card, and the shareware, and you are ready to go! Haven't heard any SSTV on 10M, only 11M and 20M. What is the 10M SSTV freq?

>Where can I learn, basic, cold hard information about CB radios.

You are probably at the best spot to do this. Just monitor this
newsgroup for a couple of weeks.(you will need hip boots at
times) Use a newsreader that will allow you to search old posts
and search by subject. Ask questions if you can't find it in the
archives somewhere. I left CB back in 1966. Just came back over
the last year or so. I have used this newgroup like a personal
library on CBing. So far everyone has been very helpful. Just
wade through the openions and political
BS and learn. I don't think there is a book that contains as
much info. as this group does.

Be sure to check out the URLs in the sigs of some of the posters.
These will lead you to web pages where you can learn more. Just
dive in and start reading with a good set of filters of course!

Maybe someone can give you a good tech reason why it dropped but I have been advised to cut that ground wire off as it causes more trouble than it does good. Seems like your tuned up and ready to go now.

In other words if you don't want 300 channels and sideband just a good talking radio to communicate on the road you won't go wrong with a Uniden 76 or the newer 78. Be careful who is doing the tweaking and peaking there are a lot of "Hacks" out there. Try the www.uniden.com store www.coaxkid.com or www.bills2way.com
Bill Eitner is a good tech in Cal who frequents the NG he would be another source for a radio an a good tuning. Hope this helps.

Hi Andy

Posted and E-mailed

I apologize if I misquoted your web site. As I said I do not have much experience with wave propagation and phase shift versus coax length. Your graphic makes sense to me and not always to others.

I have mixed feelings with theory written in stone and practical experience. I speak from experience too. Not only I but other technicians have proven a theory has holes in it, in diagnosing copier problems and in the CATV trouble shooting of TVI from off air and from other neighbors TV IF's following the shield back out on to the CATV system. This usually happens where the hydro pole's common grounding is 4 or more poles away. Basically the problem ended up that the drop happened to be the a multiple of the wave length of the channel with the problem and where a Balun of 50 to 300 ohm in older sets were used. The shield would become a antenna bring in as much as 9 DB of signal, causing ghosting and a herring bone pattern.

I am not debunking ohms law. What I an saying is that the characteristics of various RF frequencies do not always follow a laboratory theory. I can't make it any plainer than that.

In many cases where personal experience is involved I am trying to add another peculiar experience to theirs not to disagree or flame! Although by the nature of some posts with their mane calling and vulgar language some would prefer a flame war... I do not have the inclination or time for that.

I answer these questions and ask questions because I am curious and enjoy a good technical discussion... and not an argument. There times when we have to agree to disagree.
Cheers,
John

>If the other person has not identified his GTH, just his
>call, and you ask where his GTH which turns out to be more
>than 155.3 miles then you have already broken the law.

Three things, just for the record.

1) I also enjoy skip and agree with you.

2) that's QTH, not GTH.

3) If you were to make contact with someone more than 250km away, discover afterward that they were beyond the limit and immediately break off communications, the FCC wouldn't consider this an infraction. If you were to call "CQ DX", make contact with someone beyond the limit and knew it and continued with said communications, this would be considered an infraction.

As unfair as the FCC seems to be, they don't expect you to be psychic in these matters. It is when your contact states his QTH and you keep talking that they can get you.

This is a wonderful idea. I think I'll do that after I get done defending the
CB hobby here tonight.
We went through this here 6 months ago and it was a lot of fun then. I think
I'll carry this fight to the ham board instead of loading our board up with
their crap again.

Greetings!

Ok, let's see if I can help.

You use a 5' length of wire before, and then you trimmed it.

What I need to know a bit more on is the luggage rack itself.

Sounds like you did trim something too far. But was anything else moved? Or relocated? Like the radio or re-routed that coax?

I'm wondering if it's possible to use a different approach.

Instead of using that wire, get yourself some old coax and some of those zip nylon wire ties.

Use the old coax in place of the wire, and the nylon ties to strap the coax along the length of the run to get to that ground spot, only tying it off to the luggage rack to hold it in place so it doesn't flop around.

Just use the luggage rack like conduit, using the grooves of the rack to tuck in the coax, and the nylon ties holding it in place.

To prepare the coax, just strip off the ends to expose both the braid and the center lead, twist both together - connecting both. Do this for both ends.

Then attach it to the mount of the antenna, route your coax along the luggage rack, and then to ground near the overhead light [I think thats the way you did it before.]

The SWR might be a bit different, but shouldn't be too high. The old coax will offer a low impedance path to the body, for the length of it's run and then you should be able to at least trim or lengthen the antenna as needed to get the SWR to a better level.

Old coax can be found just about anywhere - just be sure to make these connections good at both points.

A hardware store or Radio Shack will sell coax at full price, but all you need is the length to get from the mount to the ground point. Use RG-58, an old CB shop has this stuff laying around - it might cost a few bucks, but sometimes it's free. You don't need brand new stuff, just old stuff that no one else needs.

Regular wire is just too unpredictable, so the old coax trick should help you get back on the air.

On Sun, 23 Apr 2000 18:45:07 -0500, while the modem was pondering it's navel, "A. H." <a0h9065@labs.tamu.edu> dissertated the following:

It's sometimes difficult to distinguish a ham on the CB because of the lack of any kind of formal identification, except for Chuckie of course, who enjoys using vulgarities and racial slurs here above his ham callsign.

I agree with most everything that you've said except for one point.

If we treated every right as a priveledge, we'd never lose either one.
>Linus

This one. Priveledges are earned and, in turn, deserved. Rights are
inalienable.
The nazis, communists and the king in merry old England in the medeval days

considered basic human rights to be priveledges to be given and taken away at will.
If we begin to "nose up" to ANY government just for our rights, (priveledges as you put it), then the government will begin to think that our basic rights really are there to be given and taken away at will and then they will begin to disappear.

People have given their lives for rights. Priveleges require much less effort.

>
It is legal for hams to do this because their license is supposed to, (in theory), represent that they have knowledge of what they are doing and how to avoid these situations.
This is not always the case however.
It is not legal for hams to go blasting through home electronics and you do have recourse through the FCC.
On the other hand, the CB'er is limited to 4 watts output and, if his unit is working properly, will not cause such interference.
There is no double standard here. God only loves the ham. If you don't believe me, just ask one.
Jeff

3307. Re: Tweeked and Peaked

Greetings!

Pretty much any CB radio will work, but I would recommend that you get a radio with at least the following...

ANL - Automatic Noise Limiter to reduce noise.
or
NB - Noise Blanker [ANL comes standard with this option] to help remove noise and improve receive.

RF-gain - to lessen noises and overpowering radio rigs that fuzz up any receiver. Turn the control down [counter-clockwise] to reduce these receiver problems.

Going to use a Power Mike?
Get a radio that has a Mic Gain, or Dynamike control to help control volume, you read about why below.

Any radio that uses a Dynamic mike element so you can run a power mike on the radio - it sounds like you want to be heard so I have some suggestions.

Some radios use Electret condensor elements that also can sound dynamite, if you mod them right, but don't take power mikes well and can squeal.

Some radios you'll have to avoid...

Cobra 19+, 19DX, 19DXII - take condensor powered elements.
Midland 77-116/77-118 - condensor powered.
Uniden Pro-538W - Condensor powered.

To be safe, any radio that uses a Dynamic element for the microphone is recommended for your application.

Why?

Well, you can then use a power mike to tailor your audio and loudness. You can sound pretty loud without having to butcher it further.

Get a good antenna! Get a reputable brand, Wilson, Firestik, Francis, Solarcon, Penetrator - from sleek-looking to gawd-awful monstrosity - theres a whole gauntlet of styles to choose from - but keep it simple! And put it on your vehicle in a good spot!

You can check out my Web page if you have questions - links in the sig file at the bottom of this message.

If you want it tweaked and peaked, well, the above suggestions would get anyone started out well. When it comes to mods though, be conservative in doing any particular type of mod. The radio will last longer and people will thank you for it in the long run.

The radios, the ones listed above to avoid, can work wonders and can take some mods, but these mods are not for the timid or ones just starting out. But they are perfectly fine if all you want is a radio to use.

But, if you want real performance, there is a wide variety - but you have to spend money to get them.

Mickey 3db of gain would be expected by adding a second antenna .Which is equivalent of doubling your power, so if you run 100 watts now and add 2nd antenna it will produce a signal
like1 antenna and 200 watts.Not a bad way to go. By phasing it a certain way you can keep it in a omni-directional pattern or phase it to give you gain in a ceretain direction.

Greetings!

Wouldn't recommend it.

You can, but trimming down the radials to save space might not be
worth the trouble. The capture area is reduced, and the antenna
becomes much more narrow in bandwidth.

e.g.-SWR might go up and not offer any good SWR when you need
to go out of band.

It's like Murphy's law,

If it works, don't fix it!

Greetings!

Have both the RCI-2950 and the President HR-2510 [Lincolns Brother]

IMO - and that means mine only - I'd recommend the HR-2510 for
durability, but the RCI 2950 has a few extras that the HR doesn't.

Going to be a bumpy ride? Get the Lincoln.

Like a lot of buttons and can program a VCR? Take the RCI.

Thats all I have to say about it...;-)

Email me a price quote on the 77-115 if you want to get rid of it.

Source record: 32764

Greetings!

Well, now that you've got that Hi-Po miracle of a Base radio up and
running, why now do you want to be a mud-duck in the car?

Ok, just the Sax...er facts...;-)

It doesn't have to be that way. A PC-122XL works well and has all the
basic features you'd need for what you want; AM/SSB - NB and RF gain -
pretty much all the stuff you need to have. Can be found for about
$100 - $125 out on the net still. The Grant XL, it's Big Brother
counterpart, can be had for around $150.00.

But, the antenna is the next question, and I hope you've got something
good for that. Because the antenna is one of the weakest - if not the,
weakest link in the radio system.

On 24 Apr 2000 15:19:22 GMT, while the modem was pondering it's navel,

>communications.

Then they put a stupid 250 km rule to dam the flow.

>Couple that
>with the fact that we seem to live in the 'me' age, that we all deserve
>stuff just 'cause', and forget about earning anything.

When did you earn your RF police badge?

>The snobbishness you see in amateurs is likely
>misunderstood.

I don't think so. As long as we don't look into the "MASSA's" eyes, we won't
get a whippin'.

>FCC tests have shown that
>even out of the box compliant CBs can mess up a good TV set.

Here's your oxymoron. If the CB was in compliance, it wouldn't mess up ANY TV.
If it does, then it wouldn't be compliant, would it? Where do you get your
information, anyway???
Just because it happens to be type accepted out of the box doesn't preclude the
possibility of manufacturers defects.
If I were to buy a new CB and connected it to a well matched antenna and it
screwed up a TV, it would go right back into the box and back to the store. IT
WOULD BE DEFECTIVE and NOT a part of my collection.

> When you
>add all of the illegal modifications (they are illegal because they are
>prohibited--no, not the same as murder, but illegal nonetheless),

Thank you for finally removing my picture from the 10 most wanted list in the
post office where you put it 6 months ago.

> Then the CB
>op, not happy with his 40 channels, wants to go up and down until he
>stomps on the other services,

Six months ago, you and the other RF police asked me to not "lump all hams into
the same catagory".
This is what you are doing to CB'ers now.
Do I sense a bit of hypocricy here???
It sure smells like it to me.
Just because I use the out-bands and a little more power than some DOESN'T mean
that I make incursions into other services that concern you or the ham

community at large. I don't transmit in the 10 or 12 meter band although I do enjoy listening to the hams, (with call signs), make fools of themselves at times on 10.

>FINALLY, he wants to know why the
>amateurs come in to this news group and gripe about what he does.

If we are NOT in the ham spectrum, harmonically or otherwise, ANYTHING that I or ANYONE else does is NOT the concern of the hams.
And FINALLY, if someone IS in the ham spectrum illegally, it is NOT within the RF police's domain to come here and cry in our beer about it. You have the same right as any other American to go and cry on the shoulder of the FCC.
Whining here will get you nothing but ridicule. I would have thought that you would have learned this six months ago.
I guess not sooooo,
I'M BAAAAACK!!!

>Amateurs really don't care what goes
>on within those 40 legal channels.

Another batch of bullshit. The ARRL is in the process of getting the 250km skip rule repeal shot down on THE LEGAL 40 CHANNELS NOW. WHAT DO YOU CALL THIS???

>When the guy gets out of those and
>starts wandering away, then that affects other people.

If they don't wander into the ham bands, mind your own business.

>Keep the CB to
>the CB frequencies, and you will never have a problem with an amateur.

Maybe so but if we were to reverse this and say keep hams in the ham frequencies and you will never have a problem with a CB'er, you and the RF police would immediately jump on your high horse cavalry and ride to the rescue. The last time you guys did this you wound up with foot-in-mouth disease that decimated your numbers.
Use caution or it WILL happen again.
Jeff

If I research this for a week I can quote the specific source because I think I have it somewhere, but anyway, it came from the FCC. They had collected a bunch of complaints on CBers and hams, and had then in turn gone out to check them out over a period of time. In the vast majority of the cases for both CB and ham, the operators were using spectrally clean equipment at or below their legal limit, and for the CB equipment, in some cases even at less than 4 watts, it was trashing the neighbor's tv set. As a personal experience, I once had a neighbor with a console tv. I could stand on the other side of the room with a 2 meter talkie and put out 200mW and wipe that tv out, so some very nice looking televisions are trash.

All televisions are Part 15 devices. I think we have been there before, but if you need a tutorial, let me know. The problem is not that the CB is bad, the problem is that the other equipment was poorly designed and is subject to interference.

Your argument is very similar to any John Doe on the street who knows next to nothing about Part 15 devices, so you might want to get to the fcc.gov page and download a copy of the Interference Handbook. They have it for download.

By the way, this would not be an oxymoron; I think you meant to say that it might be a nonsequitur.

You know, it's kind of funny. Ham is like being married and CB is like living with your girlfriend.
Although in some areas, living with your girlfriend may be illegal, some people do not feel the need for a piece of paper to express their commitment to the object of their affection. It may be illegal but people do it anyway.
While a husband may love his wife and is just as devoted to her as a man who co-habits with his girlfriend. Some CB'ers love their hobby and are just as devoted to it as an extra class ham loves and is devoted to his hobby. The only difference is that the CB'er doesn't have a piece of paper to prove it.
There are some CB'ers, (like myself), who may use the out-bands or more power but, at the same time, we keep our equipment clean, try not to disturb our neighbors electronically, and do not make incursions into the amateur bands.

In other words, we basically subscribe to the same tennants as hams do with the exception of frequency, power limits and a piece of paper.
The hams that I refer to as "the RF police" are the ones that bitch for the sake of bitching. One ham, several months ago, threatened one guy with the wrath of the FCC for asking a question about a linear. The hitch here was the fact that the author of the question had "u.k." after his e-mail address. The ham didn't even look before he shot at the guy. Another couple of times, there were hams with their call letters in their e-mail addresses that asked questions about linears. (They seem to know where to get accurate answers). These hams got bitched out too even though they made NO referrence to using them on CB channels. There were even threats of sending posts and e-mail addresses of people who asked or answered questions about illegal operations. This smacks of censorship, intimidation and bully type scare tactics which is just plain assholishness on their part.
It made the ham community look like the Keystone Kops running around shooting at anything that moved. The thing that these hams don't seem to think about is the fact that it's not just a room full of people bickering amongst ourselves. The entire world is looking on and saying, "hey, look at those assholes over the big pond." Pure paranoia and the rest of the world is looking on at their unprofessionalism.
It's the hams that think that they are impressing someone while trying to put on an air of authority, (smells more like a fart), while telling CB'ers how much of a criminal they are for doing basically the same things that hams do but without a benefit of a piece of paper. I know that that piece of paper makes most ham activities legal. What I'm trying to say is that not all CB'ers take a disruptive outlaw attitude.
All that comes out of the hams mouths though is something that sounds like; NYA, NYA, NYA, NYA, NYA, I'M BETTER THAN YOU ARE!
In other words, like a whole bunch of cry babys whining that little johnny is fishing without a license. Even when little johnny isn't fishing in their pond.
Have a good night.
Jeff

In all fairness to the hams, It can IF one is running a dirty radio or linear.
It is the people like us that run clean equipment that get a bad rap for the
ones who run dirty.
I agree though that if we aren't making incursions into the ham bands, they
should keep off of our asses.
Jeff

Have a good night, neighbor.

Where do you get your information? Your cb could be perfectly within all
specs as far as spectral purity, power out, properly matched to a good
antenna, and still interfere with a TV, stereo, telephone, or any device
sensistive to RF, and with no fault to the cb. Ever hear of fundamental
overload? Ever think that the devices being interefed with that are
"defective" because they cannot reject an unwanted signal as they
should be able to do?

And it is a bunch of horseshit to lump free banders in with violent criminals
and you know it.
This is just a sidestepping diversion to inflame free banding.
This is typical for a ham that has has no arguement or valid point to make.
Six months ago, the ham community complained when I lumped all hams in with the
holier than thou assholes all the while lumping all CB'ers or free banders in
with murders, rapists and people who are out to destroy society as we know it.
This is a bunch of bullshit as we generally don't go around beating little old
ladys over the head with linear amplifiers to snatch their purses or raping
young girls with our broad band antennas so just knock off the bullshit before
you ruin the last remnants of credibility that the ham community has left here.

On another message board, a person asked how to build a 100 watt dummy load. I gave him, verbally, the plans on how to build one right down to the cautions about using the proper cooling oil, (transformer or mineral oil). A ham came in and argued the proven science that I had posted with the economy of using used motor oil or vegetable oil. (This went on for a week and a half.)
In one of his final arguements, he asked the question "so what do you care if he burns his house down?".
I told him that if the guy was my neighbor and my house burned down too, this would definately would affect me.
There are some hams out there who take a "it don't affect me" attitude when it comes to the safety and well being of others. It would be nice if they would take that attitude with less harmful things like CB and be more watchful of things like purse snatchers and murders. Then they could use their hot shot ham equipment and repeaters for something that really means something.

:>FCC tests have shown that
:>even out of the box compliant CBs can mess up a good TV set.

: Here's your oxymoron. If the CB was in compliance, it wouldn't mess up ANY TV.

Wrong. It won't mess up a properly filtered TV. Unfortunately, those do not exist in the US, and probably nowhere else either.

My TV has no problems, but I added the inexpensive filtering that was necessary.

: If it does, then it wouldn't be compliant, would it? Where do you get your
: information, anyway???

Pribably two places. The FCC web site itself - it is a nice reference when you are talking about FCC regulations. The second is the owner's manual for the TV - which states that the owner must accept any interference that occurs, and must not cause interference itself.

: Just because it happens to be type accepted out of the box doesn't preclude the
: possibility of manufacturers defects.

True.

: If I were to buy a new CB and connected it to a well matched antenna and it
: screwed up a TV, it would go right back into the box and back to the store. IT
: WOULD BE DEFECTIVE and NOT a part of my collection.

Good luck finding a replacement that didn't do the same thing.

CBers like to fiddle with things - myself included. Years ago I used to crank up radios just as loud as they would go. I used to do the same with amplifiers too - so that they would badly splatter all up and down the band. I used the best power microphones and then modified these for even higher gain. I would change the audio passband of the Tx circuits in radios to -widen- them up and increase the output further. It was just one big power struggle in my neighborhood! When I grew out of that (took a couple of years) I came to the realization that the best performance could be attained by running the radio pretty much stock - but with a squeaky clean amplifier. No the locals make all the noise and I make all the contacts!

To answer your question: Just like anything else you own, a good amplifier should last indefinitely if you don't abuse it.

Just remember...only "real" DX groups run USB...lol
I guess I belong to a 'fake' DX group.

>whats the longest anyone has had a amp without replaceing anything in it

Like I said in a earlier post. I have a davemade (back when dave made them himself) 4 pill amp. I have used it basically everyday so it has been beat upon. I have had it for 11 or 12 years. It has been run on 20 volts. I have used it all that time except for a stretch of about 1 year when I lost interest because of my job and all the traveling.

Hey duki!
Everyone who knows what I run knows that I have a old davemade 4 pill that dave himself built. I have been running it @ 20volts for over 10 years almost 11 and it has never blown and it does sound real good!
Perhaps you can explain that?

>like it. If its a good design then guess what...now there are two

They get excited because the guys from the dave camp felt that 123 stole dave's amp design and went and started his own line copying the same exact amp.
In other words... (since you used soda)
It is just like me learning the ingredients to a popular soda like coca-cola because I worked at the company and decided to leave and start a new company and sell coca-cola but, I WOULD CALL IT ICE COLD COLA!!!!! Same great cola taste!!!
Now I know concrete man is laughing!!!!

Check around 28.680 (+ or - 10kc or so) when the band's hot.
I use the Hamcomm interface (about $5 to build) and EZSSTV by Pasokon.

Quite true... once had a neighbor who gave me all kind'a flak over Telephone
Interference from a stock 11 meter rig... even had problems with my kid's
walkie talkies (2 watts). He refused to believe that it was the $145
phone's fault (a Cobra!!).

Sent by Silly813@aol.com

Q. Why did God give men penises ?
A. So they'd have at least one way to shut a woman up.

Q. What's the difference between a paycheck and your dick?
A. You don't have to beg a woman to blow your paycheck.

Q. How is a woman like a laxative ?
A. They both irritate the shit out of you.

Q. What are the small bumps around a woman's' nipples for?
A. Its Braille for "suck here".

Q. Why do men die before their wives?
A. They want to.

Q.Did you hear about the guy who finally figured out women?
A. He died laughing before he could tell anybody.

Q. What's the difference between a woman with PMS and a pitbull?
A. Lipstick.

Q. Why do women have tits ?
A. So men will talk to them.

Q. What's six inches long and two inches wide and drives women
Wild?
A. Money.

Q. What's the difference between your wife and your job?
A. After 5 years your job will still suck.

Q. What's the best thing about a blow job?
A. Ten minutes of silence.

and finally...

Q. Why are hurricanes normally named after women ?
A. When they come they're wild and wet, but when they go
they take your house and car with them.

You would only have your self to be angry at as you were the one who blew all
of that time and money without checking out all of the alternatives.

Hahahaha.. listen to your intellilect self.. Not to mention a lot of others on here.. Now. If Im not mistaken, I have yet to come in here babbling about "I know this, I know that."

Who are you "COLD?" Beside the fact that you present yourself time and time again as one of C.B.'s biggest morons. Do you really think you have what it takes there Mr. Keydown? Come on over, down, up to Norfolk, VA. I'll shut down your pansy a** real quick. Then I will totoally humiliate you in a vocabulary contest afterwards. How does that sound?

No need to answer. 90% of all of you truly are morons. The other 10% usually just read.

icecoldncy@aol.com huh. Yeah. I got friends with them too. Take care. Now, go get down with your good buddy Charles Brown at the Stonewall keydown. Hahaha.. Idiot!

To the rest of you, only those who ACT like they know, get real. To those who do know, stay real.

>Sorry little boy, but cb in no way competes with ham radio. As far as
>new comers go, sure, the only thing you have to do to get on cb is buy a
>radio, nothing else required, any idiot can do it,

Sure they can. It happens every day with the no code techs. Even a lot of coded hams only memorize the answers just to get on the air with NO idea of the theory behind the PPT switch.
This arguement just turned into a great big fart.

not much
>accomplishment there.

Not much accomplishment in learning how to drive a car either. Most people don't have any idea what goes on under the hood either. PFSSST!!! There it goes again.

As far as fun with 50 dollar radios, I have had
>more fun on the ham bands, legally, with radios that I constructed
>myself for less than 50 dollars using surplus parts and parts scrounge
>from old TV's and such. Can you say that?

No because it is not within our rules to build a a non type accepted radio. Apples to oranges here to. POOT!!! It's really getting ripe in this thread.

And the antenna I am currently
>using cost maybe a whole $10.

I built an inverted "V" and hung it in my oak tree out of free scrap wire and talked to Switzerland. THSSST!!! Wow, that was a bad one.

Face it, cbers have turned 11 meters into
>a radio sewer pit.

If you don't like it, then get your nose out of it. Oh, wait a minute. You are probably used to the smell, judging from your thread.

My comments about what the cb service was intended to
>be is correct. To say tha cb competes with ham radio is a really
>stupid statement, but then what else would I expect from the cb
>mentality.

The same as what I would expect from a ham mentality. An indefensable defense. The number of new ham applicants have been wilting for years due to the outmoded code requirement.
I'm full of shit you say??? then why has the FCC dropped the code requirement to 5 WPM across the board and weakend the written test requirement?
Answer, to try to shore up a hemoraging dike that has ruptured and washed away a lot of potential applicants with college educations that could bring a lot of fresh knowledge to the ranks of the ham community but aren't interested in learning how to chisel messages into stone tablets with copper chisels and stone hammers.

>Now run back to your mommy and tell he that mean old so-and-so is saying
>bad things about your radio.
>

And go back to your elementary school where you learned only yesterday to sidestep an adult debate by picking on someones parents instead of sticking to the subject at hand. You'll have to do better than this to get your point across without making yourself look like an asshole.
If you've run out of ammunition as it appears that you have, your enemy will look kindly upon you if you stick your tongue out at them.
Jeff

People like you really scare me with the comments that you make like this one.
There are two possibilities that I see here.

1) you are psychic and can look into someones home and really see what kind of
radio they have and analize it's performance or,

2) You are really only 10 years old and snuck into his fathers den and found
his password for his computer.

Either way, you are dangerous as,

1) If you really can see what's happening at a distance and non of us are safe
or,

2) No one knows that you are really only 10 years old and assumes that you are
an adult while ruining any hope of the ham community of repairing the damage
that people like you cause to it's reputation.

>Jerry
>
>
What you say is true but these channels DO go mostly unused except for 26.620
for CAP. These frequencys were allocated 40 years ago for govt, itinerant
business and broadcast links.
It would be logical to assume that they aren't used much for official purposes
with the advent of digital cell phones, spread spectrum, 800 and 900 MHz
trunked systems and small, reliable UHF systems coupled with the fact that the

govt KNOWS that free banders are on these frequencies all over the world. I doubt that our govt would be dumb enough to hold secure communications in this band unencrypted. One could safely assume that they are pretty much abandoned. This is not to say that the govt condones their use by free banders. It is more like the ARRL and a lot of hams in general want to keep them off limits as a buffer zone for the 10 and 12 meter bands. This is a true waste of spectrum. The hams hide behind their licenses when they interfere with a legal CB base station and blow us off by saying "tough shit, I have a license to kill your radio's front end circuitry", while feeding our base antennas with up to 1500 watts in the 10 meter band and turn around and scream like banshees when they have their beams pointed at our antennas and cry about how we are ruining their QSO's with our measly 4 watts.

Businesses today are either using business band, older GMRS grandfatherd licenses or even FRS. Broadcasters today are using UHF for mobile links. Govt is using cell phones, Nextell type walkie / talkie systems and 800 MHz trunked systems and, as some rumors have it, spread spectrum on the free bands. There really isn't much danger of anyone interfering with "official" communications. Even if the govt is using spread spectrum on the free bands, we couldn't interfere with them as either one of us wouldn't even know that the other was there so where's the beef???

More ham horseshit!!!
Why is it when a ham runs out of ammunition he has to start throwing stones???
You seem to have the need to slander CB / free banders by sidestepping the issue and equating us with violent criminals.
This only makes the ham community look stupid to the rest of the world and remember, this is a world wide media here. It's not just a bunch of us at a coffee break or ham fest arguing the issues here.
People around the world are reading this ans saying" What the hell is it with those American ass hole hams, anyway? WE read about American violent crime rates sky rocketing and the worry about CB radio."
As I had said in another post, not one news report has come out about a rabid CB'er knocking little old ladies over the head with a linear amp or raping a school girl with an Antron-99. You would have our pictures in the post office if you had your way.
If you ass holes would get down off from your high, lilly white horse and look in your books, you'll find that NOTHING that we free banders do is against the LAW.
Not 27.655, not 10kw. None of it.
The only presiding LAW concerning radio spectrum was written in 1934 authorizing the establishment of the FCC.
The FCC CAN NOT write LAWS. This is the domain of congress.
The FCC ONLY writes RULES.
Yes, violation of these RULES do carry consequenses.
There are NO FINES. There ARE, however FORFEITURES. Cash or equipment. These are what are call CIVIL PENALTIES.
They really wern't dumb when the wrote the FCC's charter.
The example below is long but I think you'll find it interesting on constitutional grounds.

If I am accused of a CRIMINAL offense, it is up to the arresting agency to prove their case against me. I don't have to say a thing that would incriminate myself. I don't have to talk to the police, prosecutors or the judge.
HOWEVER, in a CIVIL case, the rules of evidence are much more slack. If I get an N.A.L. I have to go and talk to the FCC and prove my innocense. If I don't, they come and get me and summarally find me guilty.
Don't think so?
Without debating wether he was guilty or not, O.J. Simpson was arrested and put on trial for 2 murders. He didn't have to say a word in his own defense. For what ever reason, a jury found him NOT GUILTY. In other words, under the law, he didn't cause the 2 victims to die.
Here comes the familys of the 2 victims and take him to CIVIL COURT.
Now he has to get up and prove that he didn't kill the 2 victims. It cost him $35.000.000.
One court said he wasn't guilty and the familys didn't like what they heard so they hit him in another court and got what they wanted.

It would be like, (God forbid), your neighbor down the street got murdered at 3:AM and you were his best friend. They couldn't find the killer so his family sued you saying, "Well you were his best friend, why wern't you there at 3:AM to help him??? You are responsible!!!".

Now, in the O.J. case, what happens if they were to find the real killer??? His life is ruined and he's out 35 mil.

The same could happen, albeit on a much smaller scale, with the FCC.
They could come in, arrest you, confiscate your equipment and make you forego your civil rights because this is NOT a CRIMINAL action. You are treated as though it was but, "it's a civil matter" so the civil rights that we Americans hold so sacred DO NOT APPLY here.
It's like the civil forefeiture laws in some states like here in Florida for example.
If you own a small mom and pop bakery and run down to your bulk supplier because you needed 10 lbs of baking soda. The police pull you over for speeding and search your car. They arrest you on suspicion of drug posession, (baking soda is used to produce crack). This is a CRIMINAL charge. Under the laws of Florida, they can confiscate your car. They do a test and find the whole 10 lbs of power is nothing but baking soda and your business lawyer comes down with your bakery license. We're sorry and all is forgiven, right???
WRONG!!! If the car that you were driving was something that the police liked the looks of or thought they could make money off from, (they can keep the procedes from such sales), WHAMMO, this part of the whole fiasco has been a CIVIL matter since the blue light first came on.
This is a CIVIL forefeiture. You have two choices.

1) you can walk away and forget your car, Which a lot of people do as the cost of litigation usually outweighs the value of the car) or,

2) You can get a lawyer and sue the arresting agency to get it back.

Sound unbelievable, unfair, UNAMERICAN??? Think I'm crazy??? Check it out for yourself.
Ask your friends in Florida or research it yourself. Other people here on this

NG that live in Florida will tell you the same thing.

Am I off the subject here?
Wrong again. My point is that you must read the fine print when it comes to RULE making bodies that can levy CIVIL FOREFEITURES. Read the fine print VERY carefully or it can jump up and bite you in the ass. If you get an N.A.L. and you think you can fight it, Get a good communications lawyer and carry it to FEDERAL court. If you're right, you'll win.
Good luck.
Jeff

>CB radio is
>not a licensed service.

Wrong again.
Every time someone in the U.S. keys a mic on a "legal" CB radio, he is licensed by rule by the FCC and is bound by basically the same rules that were in effect when a paper license was required. If he keys an"illegal" CB radio, he is then licensed by no one and this is where he gets into trouble as the "illegal" radio is not type accepted for the CB service or the free band that he may be oocuping. The exception to this rule is, of course, the ham who can legally modify a CB radio to work in the ham portion of the spectrum.

>TV tuners are
>required by Act of Congress to cover 2-83 and that is still true today.

If this were true, then there are MILLIONS of TV sets and VCR's that have been on the market for years that are in direct violation of congress.

Of the seven TV's in my house, only the Zenith that was built in 1984 goes beyond channel 69. Behold, American ingenuity at it's finest. "Quality goes in before the name goes on".

Only one of the 5 VCR's in my house tunes to ch 83 and that one is a Sharp built in 1978. Hey, wait a minute. We must have a mole in the tuner production plant in Japan.
Yes, now we're getting a leg up on the Japanese in the electronics department!!!
It must be a conspiracy by all of the far eastern electronics manufacturers to bring congress to it's knees.
CALL TO ARMS, CALL TO ARMS!!!
WE ARE BEING INVADED BY DEFECTIVE JAPANESE ELECTRONICS!!!
(This has been happening for years under our noses.)
The next thing you know, all of the cable boxes that come out of Japan will only get CSPAN and we will be forced to watch as the Japanese take over congress and roust all of the carpetbaggers. WW II.5
Oh, what a woeful day that will be.
Jeff

Most any reputable shop should be able to handle them. They are very easy to work on as long as you don't have to replace any special hard to find parts.

Problems like this are the exact reason you need to understand the theory so
you know why it is happening instead of chalking it up to RF magic. When things
don't seem to work as they should this only means that things are not as they
should be, there is an abnormal condition that needs to be corrected. This is

called troubleshooting. BTW: RF on the shield often means a bad termination or connecting a unbalanced line to a balanced load through no BALUN, a bad BALUN, or just one of poor design. No mystery here.

Commercial licenses are a joke.
Ham licenses used to mean something before America took the road to shoddy socialism.
But a ham should still ask the question in the ham forum.

i just got this from a radio friend in sweden . i hope the guy who says its ok
to write illegal callsigns on envelopes reads it.

****
This message sent by: "Thomas Hasselberg" <hso747f@tninet.se>

To all 11 Meter user's

We have just noted an increasing nr of Radio police Actions against
11 meter operators with in central Europe, if this have an connections
between different countries and different actions we don't know..

But it cud be wise to be more alert within thaws countries that have strict
laws
against the harmless use of 11Meter....At least for a whyle.

3405. Re: Hr2510 Pin Diode

Newsgroup: rec.radio.cb
Date: 2000-04-25 00:00:00 UTC
From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <8e4v9f$8kn$3@mark.ucdavis.edu>
Source record: 32855

: spikey <spikey1@bellatlantic.net> wrote:
: Does this radio have such a thing?

may not be labeled as such, but it does have electronic switching which probably uses diodes for said.

: I am replacing most of the TX section and was told I should change the
: "pin diode"..

Why, if the section is working, why would you want to hose it up..?

: If anyone could give me a location or part number, I would greatly
: appreciate!
: Thanks

The manufacture is the place to go for an original, unless you have the service manual. HP makes some great pin diodes, but your probably wasting your money.

cheers

So are you saying that everyone here that doesn't use their real
name is a coward? Takes a real arrogant person to call over half the
newsgroup posters here cowards.

why woudnt the radio police being more active not have to do with callsigns on the envelopes? in those countries they dont call the radio police "police" for just any old reason. there not nice gus in suits like our fcc. they do all types of things to catch people including inspect letters comming in from other countries for signs of illegal activity like pirate callsigns or stamps from radio groups and even cb type stickers people put on there envelopes. its things like this that are getting people caught over there. here is another letter that i recieved from a friend in belgium today. this guy was caught by people sending too many envelopes with callsigns and other paraphenelia and the authorities became supicious.

****
This message sent by: "Kenny, Eddy, Martine" <Family.Coenen@village.uunet.be>

hi everybody,
I have some sad news to report. Today, Max 16 BRC 01 had a visit from the authoroties that check the use of illegal radio materials in Belgium. All of the QSL cards as well as his computer, directories, log books,... were taken away. Max therefor asked me to inform everyone that he won't be able to return orders of QSL cards, nor personal qsl's, nor those of DX-peditions. He asks for your understanding in the matter and if there are any more questions, feel free to mail me at family.coenen@village.uunet.be
So I say again, please don't send any more qsl's to Max, because he won't be able to respond them.
Please send this message, either by e-mail or via the radio itself to as many people as possible in order to avoid further problems.

Thank you for your attention.
73'

16 BRC 003 Kenny

> expect a response when you do something like that. i'll stop using your name
> or talking about you in the future but i may post to something you write if i
> disagree. have a nice day.

So what you're saying is that you're going to monitor my future
messages and attack me again if I say something that you consider "dumb."

Look man, I'm not going to submit to you watching over me (afraid to
say something that might trigger your attacks again). Who the fuck do
you think you are? You don't have the right to watch over me. What the
hell makes you think you have the right to control what I say? What
makes you think you have the right to harass me for months if I say
something you don't like?

You say I have to "expect a response" when I post something dumb in
the newsgroup. Nonsense! Why should I expect to be harassed for
several months just because I posted something in a newsgroup? Nothing
I could have said gave you the right to post messages all over the place
in an attempt to harass me. And nothing I could have said gave you the
right to do that over a period of several months.

Like I said, man, I'm not playing your games anymore. Leave me alone.
Mind your own fucking business and leave me alone.

Dwight Stewart

I'm afraid I'm gonna have to agree w/ Dwight here. Why should one be harassed just because another person thinks that what he/she said is dumb? Dumb or not, Dwight was excercising his right to free speech. If I were to stand up & preach about Wonko the Magic Elf, you might disagree with me, but you'd have no right to harass me about it.

And about not using real names... CBers especially have using handles from the beginning, long before things like newsgroups even existed. In fact, it surprises me when people use their real names anywhere nowadays.

What does this have to do with voltage? A lot of the guys on the bowl run a huge carrier and could care less how they sound, they want to talk on the bowl and will do whatever it takes to do that. I don't know how you push more "juice" into a power supply, or why you care about the bowl. I do know this though, that toilet bowl of a mouth you got keeps spewing more juice every day and proving to the group that you don't know dick about what you are saying. Why don't you go somewhere else and tell this shit to someone who knows less than you do.

In all fairness, if one posts something that someone else comments about and does not agree or like it, thats tough. No matter how many times one disagrees, it does not constitute harassment. If one was to monitor EVERY single word another posted to a public forum and belittle, invalidate, accuse of ignorance, and just generally disagree with every single word, it still doesn't constitute harassment. Attempting to invalidate or ruin one's credibility at every turn is done all the time by the press. The subject does not even have to be guilty.

I have done that, but all the local libraries have is books from 1976,77,
and 1979. I wish someone would write a new book.

probably just so he can say they are all within the same watts of each
other.
But the knucklehead doesnt get that the slug is what determines the readings
you get.
The meter has little or no effect AS FAR AS THE ACCURACY. tHE SLUG IS WHAT
VARIES FROM PERSON TO PERSON.

Most of the shitty stations you hear on 6 are base stations with guys who
are probably not as technically gifted
as the guy who setup competition mobiles. On the base most all run huge
deadkeys and
lots don't actually know the correct way to tune thier tube amps I think
mainly you hear hetrodyne
from all the stations keying togther which makes it hard to pull any clean
audio from.Unless they are coming in heads-up over everyone.Volts have
nothing to do with sounding like Charlie brown or over modulation.
Since you can set your mike gain for 100% mod and run your amp and still
would only have 100% modulation
when you are done. Thats why guys who tell me they get more audio from
2290's are a joke.

The very best publications that I've read have been Understanding And Repairing CB radios and the PLL Data Book, both by Lou Franklin.
The first will give you a complete understanding of CB radios if you have a basic to fair knowledge of electronics. The second book will you a "close up" understanding of phase locked loops.

The first book is about $39.00 U.S. and the second is about $20.00 plus shipping.
you can buy them from CBC International.
This is their site:

http://www.cbcintl.com/PLL_Book.htm

You can order both books and more from here.
Good reading.
Jeff

Thanks for the replies about the two radios !!
I do have to admint that I have been hearing more good about the Lincol,
but it seems like it has a lot less feautres that would be really nice.
For example channels, scann, repeater offsets. etc. I know you can get
the Chipswitch for the Lincoln that will add all these features, but
when you add the price of that plus installation fee, then you end up
with about $385, and that's the ceapest I saw it. The 2950 is ony about
250 with most of those fautures right out of the box. I hear that the
recieve is noisy, but it it that much noisier ?? If it worth an extra
$150 for the Lincoln with the Chipswith ??

Domains are only good for 2 years before you have to renew them...
Bigradios.com may not have been renewed. I found the following info when
I looked up the domain name in the Network Solutions dot-com database:

Record expires on 26-Feb-2000.
Record created on 26-Feb-1998.

He (Chris Schmidt) may want to renew it before someone else snatches it
up.

Physically the antenna is eight feet long. Electrically the antenna is about 27 feet long if you split the antenna and unwind it.

A KW-7 Firestik is seven feet long. Inside, the wire is 5/8 of a wave, with one wavelength on top.

I have found the KW-7 to have much better receive (and xmit) then a 1/4 wave whip.

Tim, if you were not trying to question my loyality to this republic,
why would you have asked that question at all? In fact, you've read
enough of my messages to have seen many times where I have described
myself as a conservative republican. Therefore, since you already know
my political leanings, there was no other reason for you to ask that
question other than to attempt an attack on my character.

DX means working outside of ones country, a group that primarily works others here in the states is not a true DX group in the spirit of the meaning dx, not saying its not a real group just not a dx group. not to meantion there was already a AE group long before you guys decided to borrow the name and give out free memberships.

Good grief, you must be joking. If not, where did you take your license test? In all the test sessions I've seen, it usually take about a 1/2 hour to just hand out all the various tests to the various people in the room. And I've never seen a person complete a single test in less than 20 minutes, so obviously it will take much longer to take all of the tests.

At least they did that much and obtained a license. Even as easy as you
claim it is, it must be far beyond your limited capabilites.

> not much
> >accomplishment there.

And you accomplished nothing at all. You just turned into a great bid
fart.

>
> No because it is not within our rules to build a a non type accepted radio.
> Apples to oranges here to. POOT!!! It's really getting ripe in this thread.

Oh, now you are quoting rules? Within our rules? That's really rich. You
operate illegally using frequencies you have no authority to operate on,
run modes and power you are not licensed to run, break about every rule
in the book and you bring up some rule that dosen't allow you to modify
or build your own equipment. Just when were you ever following any kind
of rules? Another big POOT!! Your right, it is really getting ripe and
trite.

In a previous article, "Siva" <sivagas@email.uc.edu> writes:
>Where can I learn, basic, cold hard information about CB radios. I got
>inspired by the fact that there is a whole world out there talking, and
>talking, and talking on these radios.
>

The public library will have books and publications about CB radio. Look for recent copyrights on books to obtain current information.

> Where are good places to buy them; is a hand-held one better than the
>ones you can have at your house? What is the best brand? What is the most
>ecomonical brand?
>

You will find the best selection at a dealer that is exclusively CB radios, or CB and amateur radio gear. Discount outlets and Radio Shack do not have the selection you will find at an independent dealer.

Mobile units (used at home or in a vehicle) will usually outperform hand held units, primarily because you will be connecting them to a better antenna than the ones that come with hand held units.

Most inportant, have fun!

> there is no skip on 11 meters.

Okay, Tim. I've had about enough of your games. I've been putting up with your crap for the last four months, and I'm not going to continue to be stalked and harassed by you.

You've posted numerous messages, in multiple newsgroups, mentioning my name in some form of derogatory manner. At first I tried to ignore your garbage. And I tried to avoid any newsgroup thread that you were posting in, but then you began posting to threads where I was posting messages (even if what you posted about me had no relationship to the thread's subject).

At that point, I tried to reason with you. I asked you politely via email to leave me alone, which you agreed to do. However, you're response to all that was to increase the number of messages posted with my name mentioned.

When I again tried to ignore you, you began posting messages all over the place - in threads I was posting to in other newsgroups, in random threads in this newsgroup, and who knows where else you have done this.

Look man, what the hell have I ever done to you? Why are you harassing me like this? Why can't I just enjoy my online time without running across endless messages that you have posted all over the place with my name in them?

Is this some kind of extortion? Are you trying to force me to offer you money so that you will leave me alone? What the hell do I have to do to get you to leave me alone?

I'm asking you one more time to leave me alone. Do not use my name in any of your messages. Stop posting messages directed at me in newsgroup threads that I'm posting to. And stop posting messages mentioning me in newsgroup threads that I'm not even participating in.

In other words, leave me alone. You're pushing me, man. And I'm not going to be pushed forever. Leave me alone.

Dwight Stewart

Perhaps because this group of CBers include many hams, shortwave
listeners, and maybe even one person with a commercial license
that will make that wimpy little ham paper look like a Romper
Room diploma. Or as he likes to say,

Those who can get a commercial license,
Those who can't get a ham license,
Those who just don't give a damn get a CB.

There's nothing that says you can't be all three of the above to
enjoy this room. Or any combination of the above.

Just my experience,I took my novice,tech,tech+ in 1 sitting and it took
about 1/2 hour.
I took my 13 WPM a month later in about 10 minutes.
I took my general and 20 WPM in about 1/2 hour a month later.
And a month or so after that I passed the advanced and extra in 1
sitting,about 1/2 hour.
I am a VE and watch how our sessions go.
Now I had no experience and don't know much yet so I figure this guy
will be much faster.

How come? We hand out what individuals need as they walk in and let
them work at thier pace,some take longer but the ones who know the
material are in and out very quickly.
If you walk in you can be filling out the test questions within 3
minutes.What do you guys do before the test that takes 1/2 hour?
Maybe it's the small populations here in Montana.

All I can say is if you are ever traveling I-57 in Illinois and are passing by the Petro at the 335 mile marker in Monee, IL. Stop in to Sean's shop and you will be impressed and leave with a good sounding, loud talking and reliable radio. Labor warranted for life.
My daughters boy friend just had a radio repaired but had to wait 3 1/2 hours for his turn. He wasn't a believer and had his radio hacked at another shop. The genius that worked on it removed the reverse polarity protection. Guess what happened? Now he has a super tuned newer style Cobra 29 peaking in the low 40's. That's better than many Galaxy 88 & 99 with regard to power out.

Communists are NOT loyal to the USA. Their religion is NO GOD. USA was founded as a Christian nation on Biblical principals. How can a pinko be loyal to that?

In fact, the commie ACLU has just "won" in the Cincinnati Appelate court to change Ohio's Motto "with GOD all things are possible." Now with Communism NOTHING is possible. WE WILL BURY YOU, they said. I can see the sand comming slowly. I see the brimstone comming quickly!!!!!
Dave!!!!!!!!!!!!!!!!!! (don't buy CB's made in China)!!!!!!

Tim, if you were not trying to question my loyality to this republic, why would you have asked that question at all? In fact, you've read enough of my messages to have seen many times where I have described myself as a conservative republican. Therefore, since you already know my political leanings, there was no other reason for you to ask that question other than to attempt an attack on my character.

Dwight Stewart (W5NET)

No, Pro-538W IS a GOOD CB. Better than Cobra version, big time. You forgot
to tell him to avoid ALL Midlands & Cobras. Why recommend junk from CHINA ?
Dave!!!!!

Handy Andy wrote in message <3904e4f1.7452305@news.iserv.net>...
Greetings!

Pretty much any CB radio will work, but I would recommend that you get
a radio with at least the following...

ANL - Automatic Noise Limiter to reduce noise.
or
NB - Noise Blanker [ANL comes standard with this option] to help
remove noise and improve receive.

RF-gain - to lessen noises and overpowering radio rigs that fuzz up
any receiver. Turn the control down [counter-clockwise] to reduce
these receiver problems.

Going to use a Power Mike?
Get a radio that has a Mic Gain, or Dynamike control to help control
volume, you read about why below.

Any radio that uses a Dynamic mike element so you can run a power mike
on the radio - it sounds like you want to be heard so I have some
suggestions.

Some radios use Electret condensor elements that also can
sound dynamite, if you mod them right, but don't take power
mikes well and can squeal.

Some radios you'll have to avoid...

Cobra 19+, 19DX, 19DXII - take condensor powered elements.
Midland 77-116/77-118 - condensor powered.
Uniden Pro-538W - Condensor powered.

To be safe, any radio that uses a Dynamic element for the microphone
is recommended for your application.

Why?

Well, you can then use a power mike to tailor your audio and loudness.
You can sound pretty loud without having to butcher it further.

Get a good antenna! Get a reputable brand, Wilson, Firestik, Francis,
Solarcon, Penetrator - from sleek-looking to gawd-awful monstrosity -
theres a whole gauntlet of styles to choose from - but keep it simple!

And put it on your vehicle in a good spot!

You can check out my Web page if you have questions - links in the sig file at the bottom of this message.

If you want it tweaked and peaked, well, the above suggestions would get anyone started out well. When it comes to mods though, be conservative in doing any particular type of mod. The radio will last longer and people will thank you for it in the long run.

The radios, the ones listed above to avoid, can work wonders and can take some mods, but these mods are not for the timid or ones just starting out. But they are perfectly fine if all you want is a radio to use.

But, if you want real performance, there is a wide variety - but you have to spend money to get them.

On Sun, 23 Apr 2000 19:12:16 -0700, while the modem was pondering it's navel, "okae11" <okae11@okae11.com> dissertated the following:

Just the amopunt of "turn on" time.

A amp unless it is class A is never on for a complete
RF cycle.

Class A fullcycle
Class B half cycle
Class C less than half cycle

Great review!! I really appreciate that you took the time and had the
forethought to do this, as I never even knew that there were dish's for CB.

Dwight,
Although I can see where your coming from, and regardless of my personal feeling on the subject, Tim does have the right to comment on any post in the newsgroup the same as you or I or anyone else does. MANY people disagreed and commented on my views of the Eleon thing. Me an Gary have had our rounds with it. Some times the posts were insulting, sometimes not. When they were insulting I just disregard them. That is a part of life. Although I do not know the posting you are referring to, not that it is my business anyway, you just have to take things of this nature with a grain of salt and consider the sources of statements and comments of the type that you are stating. You just need to be man enough to overlook and ignore child-like behavior. And don't get me wrong I am not directing these statements at Tim or any other person directly, because I don't know the whole situation no do I care to, I am making a general reference to any person.
Bottom line Dwight, just be a man and ignore it. And the people who do these type of things (that is, that you feel people are doing to you) if you have asked that person or persons to stop and they continue, it just shows that person immaturity.
Don't be afraid to post questions whether you think they are dumb or not. I know I post many questions that many people on this newsgroup more than likely think are dumb questions, but most have had the common decency to respond in a mature and responsible manner. Don't let one or two rotten apples condemn the whole bunch.

LOL, thanks the information on why this antenna won't work. I am still learning about "real" antenna's (base antenna's and design).

P.S. I already have a watch, but thanks. Part of the reason I didn't ask the time. *S*

Thank you all for the help and knowledge that you have shared. It has helped me allot in understanding a few of the basic fundamentals of CB antennas. I will be checking out the sites that you have suggested, read some books, and then look into antennas again.

Thanks again
Maveric

Do you have a lug. rack if so You can get a mount that will bolt on
that and you should be ok and won't have any holes, we did that to a
buds truck and he gets about 10 mile range.

>> This arguement just turned into a great big fart.
>

>At least they did that much and obtained a license. Even as easy as you
>claim it is, it must be far beyond your limited capabilites.
>

If it was, I wouldn't be talking out my ass as you have been.
You make far to many assumptions about people because you are sitting backwards on you lilly white high horse. This is apearentlt the only view of the world that you have.
You know absolutely nothing about me, my knowledge or capabilites so you've just farted again. Your little cry baby whining about what people know and don't know still sounds like some 10 year old in the school yard saying "I'm better than you are!!!". When you start putting out that someone doesn't know something when you don't know anything about them simply destroys any remaining credibility that you may have had.
Just so you know, I have been tested by ham friends and i can almost pass the general exam. I choose not to because I choose to communicate with the higher class of people that I find on the outbands.

>> not much
>> >accomplishment there.
>
>And you accomplished nothing at all. You just turned into a great bid
>fart.
>
I'm sorry, you must have mistaken my for someone else. I don't "bid on farts".
>>
>> No because it is not within our rules to build a a non type accepted radio.
>> Apples to oranges here to. POOT!!! It's really getting ripe in this thread.
>
>Oh, now you are quoting rules? Within our rules? That's really rich.

You are the one who wants us to follow the rules. I was just trying to pacify you by following the rules about "type acceptance".
Besides, If I'm not willing to bother with getting a ticket, why should I bother with building a radio?
All that I need to do is pull one of the 62 radios down from my collection, hook it up and turn it on. Remember us??? The "lazy ones" who don't want to put forth an effort?

You
>operate illegally using frequencies you have no authority to operate on,

I opperate on frequencies that YOU have no authority on either. As long as I stay out of 10 meters, you have NOTHING to say about it. Unless, of course, I am disturbing your QSO on 27.865.

>run modes and power you are not licensed to run,

Once again, If I'm not on your freqs, get your nose out of my ass. If I am disturbing your QSO, then you must be on an illegal channel too. If I'm not, it is NONE of your concern. When you finally get off your high horse, you won't be able to help but step in your own shit because you are making it deeper and deeper.

break about every rule
>in the book

Yes, but it is NOT in your section of the book so it's none of your business.

and you bring up some rule that dosen't allow you to modify
>or build your own equipment.

Excuse me, I only follow 1/2 of this rule, thank you.

Just when were you ever following any kind
>of rules? Another big POOT!! Your right, it is really getting ripe and
>trite.

I don't bother to build my own equipment. Isn't that enough for you? :)

>
>>
>> And the antenna I am currently
>> >using cost maybe a whole $10.
>>
>> I built an inverted "V" and hung it in my oak tree out of free scrap wire
>and
>> talked to Switzerland. THSSST!!! Wow, that was a bad one.
>
>Wow, now that is really something. THSSST! thousands of hams have done
>it too!!

This was YOUR arguement, not mine. All that I was saying was that we can homeberw our own equipment too so big shit on your $10.00 antenna.

>> If you don't like it, then get your nose out of it. Oh, wait a minute. You
>are

Greetings!

Well, you'll have to ask the VFO for approval...

If you elope, you may not get what you want.

If you have wedding bells in your near future, you might want to make
a list and file a form for the registry at any local store offering
it.

My best advice is to get the Power Supply stable enough, most are
regulated, so you can even use it to give the clarifier away!

The Best man would probably be the Channel Display, comes is a variety
of styles, colors and layouts, at least everyone would be on the same
page during the ceremony - it can be displayed...

RF Gain could be Sarge-at-Arms to keep the noise down, perhaps a
backup of ANL and NB along with it as both Ushers and to throw out the
riff-raff that might want to interfere.

The PA and the Mic-Gain, working with the Volume - can make sure that
everyone hears those "I do's".

Although not often thought about the SWR and SWR CAL can be used to
make sure it's a perfect match.

Ahemn...

On Tue, 25 Apr 2000 15:55:52 GMT, while the modem was pondering it's
navel, "TW" <tandb80@home.com> dissertated the following:

Unless I misunderstand the meaning of oxymoron, it means two conflicting statements in one sentance ot paragraph like jumbo shrimp or military intellegence.

First you said a compliant radio out of the box, then you said it would mess up a good TV. Giving the implication that the CB was at fault.

If this were the case, then the CB would not be compliant.

>
This happen all of the time as electronics go further down hill on the quality
scale.

The implication that was made in this thread was that "A compliant CB out of
the box could still mess up a good TV."

If this were the case, then the CB would not be compliant.
If it were worded something like, "A compliant CB out of the box could mess up
a TV with a low quality front end", this would have made better sense.
I wasn't trying to pick his words apart as his statement was pretty srtaight
forward and direct. It apeared that his statement was trying to say that a CB
that caused TV interference could still be compliant which would be in direct
opposition to itself.

I agree with everything that you have said. As I have posted within the past 10 minutes, The statement that I was responding to appeared to be straight forward and direct and seemed to imply that a CB out of the box could cause TVI and still be compliant.
If the statement had said that a CB out of the box could cause TVI to a TV that had poor front end filtering, this would have made more sense.

I am aware of this but what ever the source, It still is a dumb rule
considering the compliance and enforcement at the time that it was put into
effect.
Whether the FCC changes this rule or not, the fact that it is being considered
by the commision at this time shows that there must be some flexability
available to this rule.

Greetings!

Not a problem, although volumes upon volumes of work are produced regarding RF...there is not any other practical way to make the RF work in any situation, than a "trial and error" method of tuning.

That is why antennas are "supposed" to be tunable - for the variables that occur in real life.

Heck, just the other day I went and grabbed some antennas from the shed and decided to "take a trip" up and down a road.

I hooked up the SWR meter, put on an antenna, started the engine and set up the meter to read reflected as I drive.

A while ago, perhaps two or more years, I remember a series of articles in this NG regarding how SWR is affected by ground losses as you travel over different soils and bridges...e&c...

What I've found in this realm of try, test, adjust, try and test again, is nothing is consistent.

If it was, any antenna would work in any condition, in any location. To me that would be the practical "Ultimate Antenna".

But Alas, it's not going to happen in the near future.

A good hint though, use an antenna that is broadbanded enough to offer acceptable SWR either driving or stopped. Firestik and Francis are the only ones I've found that meet that critical need - once tuned, they stay tuned and provide acceptable SWR for a wide range of conditions and means of travel.

I accept your apology, in reality - no apology is needed, you just caught me with my wits in another frame of reference. ;-)

Here we go again. A perfectly legal, out of the box, checked for purity radio can trash a television set. It doesn't mean that there is anything wrong with the radio. It means that the television is designed and manufactured poorly. Do I need to fish out a copy of the Part 15 rules for you to review?

Again, you are splitting hairs. If a television is going to be affected by 4 watts, it obviously is designed poorly. Problem is that more often than not, televisions are designed using shortcuts to lower costs and as a result are subject to rfi problems. Doesn't mean that the offending radio tranmitter is bad. It means that the television, radio, stereo, intercom, whatever is not working properly. Read the FCC interference handbook and review this stuff.

Pll02a <pll02a@aol.com> wrote:
:>CB radio is
:>not a licensed service.

: Wrong again.
: Every time someone in the U.S. keys a mic on a "legal" CB radio, he is licensed
: by rule by the FCC and is bound by basically the same rules that were in effect
: when a paper license was required. If he keys an"illegal" CB radio, he is then
: licensed by no one and this is where he gets into trouble as the "illegal"
: radio is not type accepted for the CB service or the free band that he may be
: oocuping. The exception to this rule is, of course, the ham who can legally
: modify a CB radio to work in the ham portion of the spectrum.
: Jeff

You are stretching the definition of "licensed" a bit. The FCC defines the
Citizens band as an "unlicensed" service. But CBers are still required, by
law, to operate within the regulations.

Many don't - and no amount of preaching or bitching about it here will
change any minds.

If amp X which is configured class C draws 130 amps @ 16vdc what is the wattage.

Amps x volts = wattage

130 x 16(if you can maintain that)= 2080
then figure 50-60 % effieciency out the antenna. 1000-1300 if all goes well, continuous..

The input power is easy to figure - 2080 watts.

The output power is another matter. It depends on the efficiency, which
can be in the range of 60-70%, as well as the driving method.

It also depends on whether you are talking about carrier power or modulated
signal power.

The one thing that can be said is that it will not exceed 2080 watts.

My VE group does all the exams on computers (we've got a room with as many as eight puters running exams simultaneously) ... most examinees take about 15-25 minutes on an exam. ...Generally process about 25 examinees every two weeks... Restructuring brought that count to 35-50 for the last several months. Did a session beginning 12:00:01 on April 15... processed >90 paperwork upgrades in just over an hour... did a 2nd session at 7pm the same day... 60 more!

Yep, only multiples of 1/4 wl antennas are resonant this includes 1/2 waves. Enough inductance has to be added to a 5/8ths to make it the next 1/4 wl multiple. This can take the form of a coil or a shorted stub.

If you are going to phase the two antennas save youself a lot of headache and make sure each antenna is a very good match to 50 ohms. Then use a power splitter made of 70 ohm cable. If the splitter is not long enough to reach both antennas the legs can be extended with 50 ohm cable using equal lengths on each leg. Actual length of the extensions is not important as long as they are equal. By adding 1/4 wl of 50 ohm cable to 1 leg you can rotate the beam 90 degrees. This is pretty easy to do with a relay so you can remotely switch it in and out.

-------- --------- -----------
Watts = 130a X 16v
= 2080 watts (input)

The efficiency of a class 'C' amplifier is at best 50%, more
likely about 30%, so;

2080 X 30% = 624 watts (output)

This ought to be correct (+ or -) 10%.

Darn right. What's the hurry. I don't move fast unless I got
something better to do.

Actually, I thought southerners were slow until I visited Indiana.
Now those people are slow.

While visiting there once, my wife and I almost fell asleep standing
in the line at Walmart while the casher looked over each item being
purchased and gave her critique on each thing ("That's a pretty shirt.
I like that color I had a shirt that was almost the same color one
time. Well, actually, it was closer to this color. No, that color over
there. Anyway, that color looks really good on me. Of course, this
color looks better. But, I like.....").

With ten people in line before us, it seemed to take forever to get
through that line (and the other lines were not moving any faster).

By the time we left Indiana, we were glad to get back to the south
where we could get things done quickly.

Source record: 33044

curious_dan@my-deja.com wrote:

>
> hey bill , there is a 12 pill xforce on ebay for sale, it looks real
> good, i was wondering how it compares to that piece of junk you got
> from them recently?

Dennis (#12) and Carl from X-Force set up a conference call with me yesterday. I didn't expect it and it didn't cost me anything. I'm not a big customer either. I've only bought two X-Force amps. In other words, their concern is not based on the fact that losing me as a customer would cost X-Force alot of money. The impression I got was that Carl is genuinely concerned with improving the product and that Dennis values my opinion enough to listen to me and hook me up with Carl.

Both of them were trully concerned about the complaints I had with the latest X-Force amp that I had received. Dennis is not into it to make money. His focus is to improve the product (CB amplifiers) in general. That means Dennis will help *any* CB amp builder that genu-inely wants to improve the overall quality of their pro-duct. It just so happens that X-Force R&D is near Dennis. Any other CB amp builder that is willing to pay to contact Dennis with specific questions will very likely receive accurate and timely information. Unfortunately, Dennis isn't as easy to get ahold of as he used to be, and he has something of a bad taste left in his mouth from his previous on-line experience.

Over the span of an hour of more, we worked through all of my concerns. At the end of the call I felt confident that the product will be improved based on my observations.

My main concern was that the first amp I received outper-formed the second one that I received (both were XT-400s). By the end of the call there was some question as to whether or not I had overlooked a crucial test. Since the amp performed well and I had to deliver it to the customer, who had purchased it as a special order (money up front), I couldn't perform that crucial test during the conference call since I no longer had the amp in my possession.

So, other than the minor, appearance-oriented items that I had mentioned in an earlier post, the basic performance of the amp could be just as good as the first one I received.

The customer that bought the amp is installing it as we speak. He'll very likely want me to check out his installation and the amp's overall performance. If I don't like what I see, I'll request that the customer leave the amp with me for further testing and possible upgrade. I will then perform the test that Dennis suggested. Based on the result of that test, I may be able to report that the latest X-Force amp that I received is every bit as good as the first one (that I was satisfied with).

I'm very happy that a custom amp builder took the time to listen to someone other than a big distributor that might cost them some serious money if they were to pull out. I can say honestly that Carl at X-Force and Steve at Pirate have taken the time to listen.

X-Force has won my trust once again. I have another customer that in a month or so will be special ordering the third XT-400 to go across my bench (I test every amp I sell). If he doesn't drag his feet or flake out, I will order that amp, thoroughly test it (including the test that Dennis pointed out), and report my findings on this newsgroup.

At this point, I would suggest buying the X-Force amp that you found on e-bay given that you understand all the standard disclaimers: The amp is used and could be in any condition--BEWARE. The price is important too. 50 to 75% of the price of a new amp is the maximum you should consider spending on a used amp. And then you should take what you know of the amp's condition into account. With e-bay you can e-mail the seller and request pictures and info. If I were contemplating the puchase of a CB amp on e-bay, I would definitely contact the seller and work out any issues I might have before I placed any bids.

> oh by the way it is item # 314659778,.....cd is
> out....

That item number came up as bad since the seller must have labeled it a "CB" amp. The seller will probably re-list it as some type of broadband linear RF amplifier. Until then, I won't be able to see it unless you know the seller's e-mail address and can forward any correspondance you have with him to me.

> Sent via Deja.com http://www.deja.com/
> Before you buy.

Good luck with buying the amp.

Keep in mind that you need a DC electrical system
that will support the amp if you expect maximum
output. 25 amps per transistor is an accepted
rule-of-thumb if you intend to compete. It's not
uncommon for people to buy an amp that their
electrical system can't properly support and then
blame the lack of output and distortion on the amp.
Don't make that mistake. Don't bid high on a 12-
pill amp if you're not ready to put together a
300 amp electrical system to support it.

Look, I have no problem if Tim disagrees with something I've said in a specific thread and wants to argue about it. But that is not what he is doing. He is posting my name all over the place - in threads that I'm not even participating in, for example.

Take this thread ("What the furthest...") as an example. Up until Tim's post, I had not said a thing in this thread. I was not a participant in this discussion, and he was not responding to anything I said. He just posted my name without any reason to post it other than to belittle me.

Of course, from experience, he know that I read this forum, and would eventually see his message, so he knew that I would see that he had posted my name again. In other words, he posted that message in an effort to harass me.

And he has done this many, many, times over the last few months. He has done it in this newsgroup. And he has done it in other newsgroups. It has reached the point where I'm afraid to read the newsgroups each night - it is almost certain that Tim has posted a message somewhere that has my name mentioned in a derogatory manner.

His messages about me are filled with innuendo, negative comments, and old garbage that we have not talked about in months. Visit Deja.com and take a look for yourself. His messages are all there for everyone (including people who have never visited any newsgroup and are only searching for my name) to see.

I don't need to see it to understand it.

I helped develop it. I know my way around
CB amp bias circuits.

I have to correct one of the statements I
made earlier (see below): Dennis' bias
circuit is not temperature tracking. That
makes it less than everything you could ask
for in a bias circuit.

All I can say is what Steve at Exports R Us told me.
I asked him for accessory prices (switchable SSB delay,
pre-amp, and bias) and he quoted $100 to add the bias
circuit.

Linear means "accurate" or "without change." In other
words, a "linear" amplifier doesn't change the waveform--
it just makes it bigger.

> and what does
> the term RF amp mean...

"RF" means "radio frequency." An RF amp may or may
not be "linear." A "linear" RF amp will amplify the
input signal without changing it too much.

> and while I am asking what does a modulator
> amp mean...

Modulators are a modified form of linear RF (CB)
amplifiers. Though the use of a certain design
trick, they amplify the positive-going modulation
swings more than the negative-going modulation
swings or the dead carrier. To understand the
concept completely requires a working understanding
of amplification in general.

> not trying to be a smartass...just that I am a dumbass as I really
> do not understand!!! :/

Study the concept of amplification. When you
fully understand the concept of a "transfer
characteristic" you'll be ready to understand
the difference between linear amps and modu-
lator amps.

Zipper wrote:
>
> If amp X which is configured class C draws 130 amps @ 16vdc what is the
> wattage.

All you can say for sure is that the input wattage
is 2080.

The output wattage is a percentage of the input
wattage that is based on a number of variables:
How far into Class C is it actually biased, how
efficient are the active devices, and how lossy
is the design? When all the variables are taken
into account, an "efficiency factor" can be cal-
culated.

A conservative, rule-of-thumb efficiency factor
is 50%. So, for an input wattage of 2080, the
output wattage with a 50% efficiency factor is
1040.

DukkhaKoti wrote:
>
> what makes a class c amp a class c amp ?

That's a big, complicated question.

The simple answer, as it applies to
common, solid-state CB amps is: The
bases of the power transistors are
DC grounded (at zero DC volts all
the time).
>
> same question with biasing .

Biasing refers to the application
of a constant DC voltage to the
bases of the power transistors.
The value of the DC voltage changes
the operating class.

A simple analogy would be the pre-
loading (or pre-stretching) of a
spring. How the spring responds
to a load is based on how it is
preset.

>likely about 30%, so;

The efficientcy of a class C amp can go as high as 90%
however you would never see this in a usefull CB amp.
A class C amp shouldn't drop below 50% efficientcy.
A "normal" efficiency would be around 60%.

Speaking of CB licenses, do you still have your ORIGINAL
license? By "original", I mean the FIRST one you ever
received? I still have mine (somewhere in a drawer!).

On the CB frequency band,The 1/4 wave is the only practical ant
available.The base loaded kind are a compomise type.It would be nice to have
a half wave(for more gain) for the car but length impossible.Get smart
people.Wayne

Nope... The Reason? I've never had a license! Didn't start using the CB until I was 14... which was quite a while after the license requirement was dropped. I guess that dates me. When I first started though, I was using an old 23-channel mobile hooked up to a 12-volt battery charger (talk about a hum!), and I remember seeing a punch label on the radio w/ my dad's old call sign... Wow... memories.

dwight, your the ones wanting problems now. the message you wrote in this post was sent to you via private email. why did you post it??? anyways here is the reply.

i read all the messages. period. dont assume i meant to say anything. if i read a news group post i disagree with i post a response. its the freespeech we love in america that gives me this right. cuba has no such rights.

>>> So what you're saying is that you're going to monitor my future messages and attack me again if I say something that you consider "dumb."<<<

i think your giving me just a bit too much control over yourself. why do you care what i write? usenet is a public forum. anytime you write a letter to the papers editor, appear on tv, or write something in usenet it is public and open for scrutiny by all, including me. i havent been harrassing you, only a comment hear and there when you try to have the image of a "big time ham" when the truth is you know very litte. you would find if you didnt have your "i'm better than you" attitude people wouldnt have anything to criticise in your post.

>>> Look man, I'm not going to submit to you watching over me (afraid to say something that might trigger your attacks again). Who the fuck do you think you are? You don't have the right to watch over me. What the hell makes you think you have the right to control what I say? What makes you think you have the right to harass me for months if I say something you don't like?<<<

i've never harrased you, just responded to post of yours that have been incorrect or contrary to my opinion. its free speech and free debate, once again its this great american system we all love.

>>> You say I have to "expect a response" when I post something dumb in the newsgroup. Nonsense! Why should I expect to be harassed for several months just because I posted something in a newsgroup? Nothing I could have said gave you the right to post messages all over the place in an attempt to harass me. And nothing I could have said gave you the right to do that over a period of several months.<<<

man you have problems, i'm a soon to be 20 year old student with a social life that really couldnt give a ratts ass about you in any way what so ever. you seem to think i'm obsessed with you but its far from the case. i will continue to read the news groups i always have and will continue to post when ever it pleases me.

>>>Like I said, man, I'm not playing your games anymore. Leave me alone. Mind your own fucking business and leave me alone.<<<

and by the way, you never did answer that question about being a communist.

i posted nothing untrue dwight, i am not the only one that remembers all your post calling us outright liars for saying we work dx. we do dx and you did claim there was none on 11 except the "ocasional rare contact". you tried to discredit us when we were telling the truth. your the quilty one here, your just upset because i'm good with a debate. you also very poften try tpo exagerate to those who dont know the whole story in an attempt to bring them "to your side" which is extremely child like. if you have a problem with me direct it towards me not these other people because that will get oyu no where in a hurry. i posted a repsonse to 1 maybe 2 at the most of your stupid post in ham news groups were you were trying to portray yourself as extremly knowledge able in radio, i simply informed then that you were not and you were misleading them, once again it was the truth. this is just another example of you exagerating thinking nobody will check, ever heard of deja power search??? if your afraid to read the news group i dont know what to say, get out of the kitchen if you cant stand the heat. oh and by the way, ive noticed you stop signing with your callsign and all that other mubo jumbo in a attempt to win support from the cb'ers here. it wont work. i invite the people to go to deja.

IF you want more bleed over, get the 2950. Is that the "extra" you are
talking about? The 2510 Lincoln is MUCH better!
Dave!!!

Handy Andy wrote in message <3904ed32.9565600@news.iserv.net>...
Greetings!

Have both the RCI-2950 and the President HR-2510 [Lincolns Brother]

IMO - and that means mine only - I'd recommend the HR-2510 for
durability, but the RCI 2950 has a few extras that the HR doesn't.

Going to be a bumpy ride? Get the Lincoln.

Like a lot of buttons and can program a VCR? Take the RCI.

Thats all I have to say about it...;-)

Email me a price quote on the 77-115 if you want to get rid of it.

Of course you can usually get parts from the Manufacturer than the dealer.
I wouldn't rag on these guys too much. These sales geeks got to put up with
a lot of IDIOT Hambos and the Hambos that want everything for nothing (which
is the main fault of Hambos). I have dealt with AES for years and find them
to be pretty decent and knowledgeable.
Dave!!!!

A.E. 352 wrote in message <3903b025@dnews.gisco.net>...
I called them last week to get an accessory for one of my radios that had
recently been discontinued by the manufacturer. They said," If we don't have
it, you CAN'T get it! And we don't have it!" I then called the manufacturer
and they sent the part right away.

I believe the truckers moved to 19 in '72 or 1973 because of React. I
remember "channel restrictions" too. Base to base, base to mobeel, maybe
mobeel to mobeel, and illegal skip below channel 1 when crystals were
reversed!!!!!
Dave!!!!!

Mike Yetsko wrote in message ...
A lot of people don't remember that until I believe the late 60's,
CB had channel restrictions.

Family use was allowed on selected channels from mobile to home,
where a 'family member' could use the radio. Then there were
others that were restricted as to mobile to mobile business use
and so on.

I've never heard of this being enforced, and believe it 'went away'
sometime around 1966.

In fact, the only time I can recall seeing it was with the documentation
that came with a Lafayette CB set a neighbor bought about 1965.
This thing was a base, and you 'upgraded' by buying crystals for
the matrix. It also has a 100mw switch.

Mike

> same question with biasing .

Class A follows the entire input cycle, 360 degrees. Maximum Fidelity, Minimum efficiency (33% in theory). Used mostly in low power audio. The first mike amp is Class A in almost every transmitter.

AB draws current for 180 to 360 degrees. Compromise. The 1 and 2 you see on vacuum tube circuitry refers to whether the grid is driven positive and therefore draws grid current that must be supplied by the driver.

Class B draws on 180 degrees (half) of the cycle and depends on the output 'tank' circuits to fill in the other half. This is the minimum for a nearly-true reproduction of the input signal, fidelity, linearity, whatever you chose to call it. Theoretical max efficiency 66.67%. As a practical matter, no device is generally very linear right at the point it starts drawing current so it is usually allowed to draw some 'resting current' with no input. Sometimes two Class B devices are used in push-pull and you hear the term 'crossover distortion'.

Class C draws on less than half the cycle (120 degrees is typical) and is therefore incapable of decent reproduction of a modulated signal. It is used for carrier, CW, FSK, and FM applications where efficiency is the consideration. Because it is something of a brute-force approach, it is prone to generate crap and requires some attention to cleanliness in design. A 'Class C linear' is an oxymoron.

Depending on the device, it may take some 'biasing' to establish operating conditions. In Class B, the base/grid/gate voltage is preset to right where the device starts to draw current (plus some resting for fidelity), class C establishes a point where only the higher driving powers cause output.

Pretty broad but I hope it answers your questions.

Hey, you bet! In fact, I know a number of people who bought
the 3 and 6 channel CB sets from RS just to 'flip the crystals'.
And the figured if they got caught, they could plead ignorance.

Only problem was the channels when you did this were 5kc
off from what would have been 10Kc spacing. Not a big deal
at all, until the digital PLL rigs came along and people went
'down below 1' with divisors and stayed on the 10Kc steps
the CB channels were on. Most would work without even
'retuning' the rig, but if you did take the effort to 'retune' with
the crystal swap, the radios performed fairly well.

When 40 channel came out, companies had till the end of
the year to get rid of existing stock of 'pre type accepted'
radios. When the last day came, anything that wasn't sold
went in the trash. Yeah, right! I know a number of RS
managers that took home MULTIPLE CB sets for $1 apiece.
If nothing else, they made gifts.

" Na, ya' ain't teeing any body off. So far , looks like everyone ya' tried to wax has keyed on ya'! "

i don't try to key over people . i don't need to prove to my self or others how "big" my radio is . i have 200 great sounding watts , i am not overmodulated so i wouldn't key over people and thats the way i like it . sounding strong and sweet .

like i said before (damn i have to repeat my self alot in this group)

goto your keydowns , keep your overdriven overmodulated setups . just keep your bleedover off of my channels

Yes sir, electrically longer antennas on a mobile are just more wire and more losses. 5/8ths antennas that are 7 ft long is just an advertizing gimmick to sell antennas. A full length 1/4 wl antenna is as good as it gets electrically speaking unless you can figure out a way to drive around with a longer antenna. The rest of the story is that you can significantly shorten a full length 1/4 wave antenna by adding lump inductance and have very negligable effects on the radiated signal making the shorter antenna more practical for a mobile installation.

Normally a real Class C amp runs at about 70% efficency with the active devices on for 120 degrees of a cycle. An AM signal fed into this kind of amp would be completely unintelligable though. Class C amps run at lower efficency and usedd with AM are more like high level RF processors that clip the modulation peaks.They make your signal sound lounder but radiate all the nasty stuff the generate. This can all be done at a lower level and all the nasty byproducts filtered ot before it is amplfied in a real linear amp.

3654. Re: Wattage equation??

Newsgroup: rec.radio.cb
Date: 2000-04-26 00:00:00 UTC
From: W5LZ <w5lz@oio.net>
Message-ID: <3907739F.5A94C83D@oio.net>
Source record: 33104

tnom,
The theoretical efficiency of any power amplifier
depends on the magnitude of the conduction angle. A
class 'C' amplifier has a conduction angle of less
than 180* (50% of a cycle). At best, a class 'C'
amplifier has an efficiency of 50%. Now take into
account that all electrical equipment efficiency is
less than 100%. Meaning that there are always losses
in the circuit due to heat, etc. Subtract this from
the 'theoretical best' of 50% for the class 'C' amplifier.
Lets be very generous and assume we have an almost
'perfect' circuit, and use 10% as a representative loss
in our 'perfect' class 'C' amplifier. That gives us
at best 40% efficiency, (by the way, that 10% is a
VERY optimistic figure!), and in actual practice, much
lower. (100% efficiency = 'perpetual motion'... not
in either of our lifetimes!)
So, if you are kind, and assume 10% accuracy of my
figures, I was 'off' by 1% (10% of 10% = 1%). Your
watt meter will never 'see' the difference.

Message-ID: <3907725F.53196B56@labs.tamu.edu>
Source record: 33108

Hmmm.. I'm no closer to making a decision....
I am getting about equal responses from both camps. I really don't mind a little button pushing to tell the truth, and I have been looking at a site that sells the export versions of the 2950 with the 10 and 11 meters 50+ watts PEP, and the RF mod already done.. with that they say that it sounds just as clean as the Lincoln. All that for about $300, while the cheapest Lincoln with the chipswitch installed is around $390.. if anyone has anything else to say, I do want to hear your 2 cents worth... especially if you know a way I could get a Lincoln with a chipswitch for a really good price...

thanks...

First: This thread speaks of a linear amplifies. Not a tranciever
with extra power consuming devices.

Second: If class C is 50% then what is B and A? 30% and 15%???

And finaly a quote because you probably won't believe my words:

Sams radio Handbook

" The theoretical efficiency of a power amplifier depends on the
magnitude of the conduction angle; a class-B amplifier with an angle
of 180 degrees, and efficiency of 78.5 percent; and a class-C
amplifier with an angle of about 160 degrees, and efficiency of
about 85%"

We all know that this is theoretical. However it is the starting
point. Approximately another 10 % (we agree) of the power is lost in
the transmission of this power.

3673. Replacement micrphones - recommendations?

> did you post it??? anyways here is the
> reply.

I posted it in the public newsgroup because I cannot trust what you say in private, Tim. In an email message four months ago, you told me you were going to stop harassing me. Since you are still doing to this day, it is obvious that your private word cannot be trusted.

In fact, I don't want to talk to you in private (actually, I don't want to talk to you at all). The many messages you have posted about me were all done in public, and the message I sent to you was public, and therefore any response that I have will also be public. It is amazing that after months of public ridicule of me, you suddenly want to talk privately when the topic is about you.

> i think your giving me just a bit too much control over yourself. why do you
> care what i write? usenet is a public forum.

And I think you are underestimating the damage your words are having. In the past month, my wife has seen one of your messages, and so has my employer. I don't like having to explain our dispute to people I know in my personal life.

And, since I have worked for the Department of Defense for many years, and am still on retainer with them, it is very dangerious when you start making public suggestions that I'm a communist. In other words, your very words may be placed in my career jacket, and may prevent a future employment situation (I doubt it, but it has happened).

In other words, it is exactly because this is a public forum, that your words have potential harm. If you want to come here, and call me names to my face, than that is between you and me. But, when you do it in a public place, you are making a statement about me to potentually thousands of people. And it is impossible to predict the possible future implications that your words will have on me and my family.

The courts have long been aware of the dangers of written defamation - take a good hard look at the libel laws. Unlike slander (spoken defamation), libel is much more serious. For example, one does not have to prove immediate damage to reputation to win a libel lawsuit.

> anytime you write a letter to the
> papers editor, appear on tv, or write
> something in usenet it is public and
> open for scrutiny by all, including me.

But you have not been responding only to my messages, Tim. And you damn well know it. This message thread is a classic example. I did not post a message in this thread. I was not a participant in this discussion. Therefore, you were not responding to anything I said. But you placed my name into this discussion anyway. And you did it in an attempt to belittle me, to insult me, and to embarass me. And that is defamation, Tim. And the fact that it was posted to this newsgroup in written form, and archived forever on sites like deja.com, makes it clearly libelous.

> i havent been harrassing you, only a
> comment hear and there when you try
> to have the image of a "big time ham"
> when the truth is you know very litte.

But, I'll repeat what I have told you before, it is none of YOUR business what kind of ham operator I am. It is not YOUR job to watch over me. Nobody gave you that right.

And you don't know a god damn thing about me, Tim. You don't know anything about what I do on my radio, or what I know about radio (or anything else, for that matter). When was the last time you were in my house and watched me use the radio? When was the last time you checked my educational background? When was the last time you checked my employment backgound? When was the last time you checked with my employer, my neighbors, my friends, or my family, to find out anything about my character?

But, the fact that you don't know a god damn thing about me has not stopped you from a four months campaign to harass and belittle me every chance you get.

Of course, I knew you were going to deny doing this, but it is all there for people to see. Deja.com (www.deja.com/usenet/) keeps an entire history of everything that has been posted on UseNet, including every message you have posted with my name in it.

I'm not going to sit here and argue with you about this. You have wasted enough of my time over the last several months. As I said before, just leave me alone. That is not a threat, just a simple statement. Leave me the hell alone. That is all I'm going to say on this matter.

> your post calling us outright liars
> for saying we work dx.

Yes, you did, Tim (and still are). I never said that you didn't "work dx." I disputed a person's claim as to the number of countries he had worked with basic equipment. Shortly thereafter, you came in and tried to turn the discussion into a debate about dx in general (and tried to apply the words I said earlier to the new debate about dx, instead of what they were intended - the person's original claims).

Anyway, as I said before, I've had enough of this. I'm not going to sit here and argue with you about such trivial matters. This discussion is over. Leave me alone.

Dennis' bias circuit is special in that it's designed
to deal with what CB amps are put through. CB amps
are overdriven and over-volted. There is no textbook
or application-note bias circuit that is specifically
designed to handle that kind of abuse and keep the
amp together.

I think you'll be happy with your new amp.

His hair is longer because he was finally able to wash it after being rescued from that pig sty.

Us tax dollars are payingfor EVERYTHING.

Because the freakin' whole city of Miami would fall if the US did not get involved.

Why would a woman who survived get custody when the father is alive?

When one parent dies, the other gets custody unless a previous court order exists or one can substantiate legitimate reason why this should not take place.

Again, Miami would be in shambles if they arrested the famly there at the time.

God damn you, you stupid son-of-a-bitch, asshole. Leave me the fuck alone. I've already told you that I'm a conservative republican, not a communist. How dare you, knowing that I've worked in the recent past (and possibly again in the future) as a DoD employee, even ask me if I might be a communist working secretly towards some unstated agenda.

I have given you no cause to ask me about my political affiliations, and you really have no right to ask about them. This is just another example where you have departed from the discussion in an attempt to attack my character.

What the hell is wrong with you? Are you on drugs? I saw the messages you posted in the drug related newsgroups. Are you high right now? Is that why you can't understand what I'm saying? Leave me alone.

It's not funny, Tim. What you're saying now has potential to hurt my entire family, and I'm NOT going to let that happen. Leave me alone. Leave me alone. LEAVE ME ALONE!!!!

More useless, wordy explanations.

Explain the application of all of this to a common,
two-device, push-pull, linear, broadband, RF
amplifier. Then it might mean something.

Oh, don't be offended, Jerry. My message was posted with the intent of honest humor. I enjoyed my visit to Indianapolis (nice town, really nice people), but I still say the people there are slower then even the typical southerner. And that, my friend, means they are really darn slow.

In fact, if she is as slow as the people I knew in Indiana, I bet it's noon before your wife gets breakfast done. Alright, lets not get too personal about this. Besides, I don't want you wife (or anybody else) mad at me.

Don't expect big AM performance out of the
2510-style radios--they use low-level modu-
lation. The 497 mod is used to increase
peak (PEP) power. To see alot of peak power
on AM you have to run a high carrier. The
2510-style chassis is what introduced the
need for "high-drive" amplifiers (amps that
can stand a 10 watt carrier and not sound
overdriven).

It's an early (mid 70's) 2-pill.
No bias, and it's likely to have
a couple of 80 watt (manufacturer's
center spec) devices in it. If so,
it really wasn't designed to key
at more than 100 watts. These days,
when the emphasis is on loud audio
(swing), I would run that amp with
a 50 watt carrier (dead-key) and
let it swing up from there.

3697. Looking for MRF477

Newsgroup: rec.radio.cb
Date: 2000-04-26 00:00:00 UTC
From: Bill Eitner <kd6tas@netzero.net>
Message-ID: <3907B258.204CBA8C@netzero.net>
Source record: 33147

A friend of mine has an HR2600 with low power output and distorted audio on SSB. With a 1 kHz sinewave input signal, the radio draws a maximum of 70 watts on transmit, but only puts out 15 watts (as tested on SSB).

I traced the problem to a leaky MRF477 in the final RF output stage. The transistor still has gain, but it tests high for collector to base and collector to emitter leakage. The collector to base leakage forward biases the transistor too much. I'm assuming that's the reason for the low output power and distortion.

So, in a word, I need another MRF477 to repair the radio. Motorola discontinued production on its TO-220 package RF power transistors, so they're not easy to find. R.F. Parts doesn't have any. They have a few MRF497s left, but I'd rather use a 477 since this radio is in a very stability-challenged application. The radio drives a touchy 1000 watt amp with a mag-mount as the load. I'm afraid that the use of a 497 might cause hard to cure (or impossible to cure without major changes) instability problems.

If anyone can help me--please feel free to e-mail me. I'd like to hear from anyone who has experience with the MRF497 mod as applied to the 2510-style chassis. I've never done it, and am mainly interested in how stable the transmitter is in a strong RF field and with large common-mode (ground) currents.

Thanks in advance.

Message-ID: <3907B517.D5F0B2E9@oio.net>
Source record: 33149

tnom,
1.I haven't said a thing about a transceiver, with or
without additional power consuming devices. I'm
speaking strictly of an RF power amplifier. Still
no such thing as 'perpetual motion', or 100% efficiency!
2.Class 'C' amplifiers are NEVER linear.
3.Class 'A' amplifiers offer maximum linearity but low
amplification.
4.Class 'B' amplifiers are typically 50-60% efficient
and do offer good linearity.
5.Class 'AB' amplifiers are typically 60% efficiency
and offer good linearity.

Nothing in this thread dealing with a class 'C' power
amplifier deals with linearity! "Cuz de ain't, Buba!".
'Doc

Dave,
I know you were just posting but I was tired of deja always
messing up so I tried remarQ it is wounderful compared to Deja.
I also am interested in the tech talk thing. If you guys decide
to do it please let me know.
Thanks
Bean

Ive set up an E-mail discussion list for CB techs. Its all good to go! I myself am not a CB tech, but I'm willing and able to maintain the list as I have done many such things before. As it is now its is set as an unmoderated list, but requires an invite. All that is required is a name, City and State and the company you work with for possible verification. If those parameters are acceptable, and you wish to go "live" with this thing, E-mail me and I'll send instructionson how to join. If you dont like those parameters, email me anyways with your feedback. ;)

Sincerely,
grif@gci.net

So am I. No electrical device (amplifier) is 100%
efficient. 100% efficiency = 'perpetual motion'. And like I
said, "Not in our lifetimes!".

> Second: If class C is 50% then what is B and A? 30% and 15%???

Class 'A' is about 50% efficient with excellent linearity.
Class 'B' is about 50-60% efficient with good linearity.

> And finaly a quote because you probably won't believe my words:
>

> amplifier with an angle of about 160 degrees, and efficiency of
> about 85%"

BUT... a class 'C' amplifier is NEVER linear, and is not
used for amplifying AM/SSB signals!!

> We all know that this is theoretical. However it is the starting
> point. Approximately another 10 % (we agree) of the power is lost in
> the transmission of this power.

Not speaking about 'transmission' losses, but losses 'inside'
the amplifier due to circuit inefficiencies (rememebr the 'perpetual
motion' thing?) which are characterized as heat.

But after your last post, please explain how a class 'C' amplifier
can be linear! I'll concede all the rest if you can convince me that
a class 'C' amplifier is linear!

>
>
> "Theoretical max efficiency 66.67%" input to output efficency ?

You have the efficiency down. 3 watts in, 2 on the coax, one in the room as heat.

Assuming you are on 23, a cycle is one 27,255,000 of a second (it was easier in the old days when we talked of 27.255 Megacycles). In that time, your transmitter went from zero to a positive peak, thru zero, to a negative peak, and back to zero. Think of looking at your signal on a scope.

Only because it is the cheapest and most likely available at the local library, the ARRL handbook handles this pretty well.

Dick

They are exactly what I thought they were.

The 7608 means they were manufactured in
the 8th week of 1976. The 9805 means they
were MRF454 equivalents (80 watt center spec).

> And thanks Bill for the information and help ...this is what this is all about

I am having a horrible time with my Hr-2600...
I blew the final in it a while back and replaced it with the Mrf-497...
I also replaced the driver,predriver and tx amp....
All I am getting now is about 4-5 watts Am...
I can swing about 12 watts ssb...

With this new final will I have to complete the high power mod to get
full power out, or is there something else wrong...

I give up on this damn thing...

Thanks..

I was actually surprised - the design of the site itself isn't half bad... Decent buttons, adequate content... But there are some obvious unprofessional elements: they use those damn animated lightning bolts and they have that music playing when the page loads. (I almost thought I'd hit some college kid's site!) But over all, not bad.

They should have a low-cost design company fix it up all nice for 'em... Someone like... Hmmm, let me see... how about these people:

http://doghoss.home.texas.net/md/

Alright, I admit... shameless plug for my design business... Sorry.

<< A lot of people don't remember that until I believe the late 60's,
CB had channel restrictions.

Family use was allowed on selected channels from mobile to home,
where a 'family member' could use the radio. Then there were
others that were restricted as to mobile to mobile business use
and so on. >>

It's quite curious but true; if you examine its history, CB radio's
longest-standing traditions are those of lawlessness.

Within ten years of being instituted as a land mobile service in the 50's its
users were trying to turn it into a 'hobby band'. The FCC responded with
admonitions against 'chit chat' and insituted a '10 minute limitation' for
contacts plus a set of complex channel restrictions. But users of the then
primitive crystal controlled equipment were already perfecting ways to modify
these to go above, below, and in between designated channels.

In the 1970's CB became linked with the song "Convoy" which depicts a truckers
revolt against authority for no reason other than they do not agree with the 55
mph speed limit. The protagonists use CB to help exceed said speed limit and
avoid paying tolls. A similar scenario was played out in "Smokey and the
Bandit". Many people began to use CB in their cars as a 'poor man's radar
detector' -- soley for the purpose of exceeding the 55 mph speed limit without
being fined.

CB's popularity waned in the 80's, the FCC breathed a sigh of relief and
promptly turned its back on the service. The remaining devotees found ways to
unlock their synthesized vfo's and add extra rf power to their signals, and 100
watt signals and excursions up to 27.500 became common.

Of course as you can see there has since been a steady escalation and expansion
toward the usage of many hundreds of watts and excursions far above and below
the 11 meter band.

Hi , l have the following Yaesu station for sale ;

Yaesu FT-101B works great . A few scratches on radio , plastic still on the face . Out-put a little low , about 80 watts . Dial has a few marks . With orginal manual in good cond . With hand mic . With 11 meters .

A pair of New MATCHED set of 6JS6C Motorola tubes in boxes and a new 12BY7A tube also in box . Made by RCA .

Yaesu YC-601 dig . read-out . Works on receive and trans . A must for this radio . Works 100% Comes with cable . Has some tape residue on top , not bad . Rest is in great cond . All digits are bright . With copy of manual .

Yaesu landliner speaker - phone patch . Has one 1/4 inch scratch on front next to the RX knob . Never tried the phone patch . Should work fine . Case is in fine cond . Sounds great .

FT-101B =$300.00
Set of tubes=$100.00
YC-601 =$150.00
patch =$ 50.00

$600.00 total
Will sell for $550.00 plus shipping , or best offer before it goes on Ebay , parted .
Thanks for reading , email me at clfastback@aol.com

Taz won with xforce boxes built by 123 (MO Watts)and modified by foxie.
Taz was running boxes out of bb's suburban. Foxie is BB's tech.If you
ask him he will tell you so. Not xforce, Dave made it is Foxie.
If you want to claim victory becouse bb uses your heat sinks well more
power to you.The man who built the boxes in bb's truck is no longer at
xforce. If you want to promote YOUR boxes I suggest you build a xforce
truck and come on down to a major break. Till you do this is just
ridding someones coat tails.

Bean

Thank you. This antenna has been a topic of discussion several times in the past few months in my area. People who live in apartments which "restrict" external antennas need an alternative. However, there is still one un-answered question... what is the "bleed-over" like when you switch from A99 to President dish? Do you bleed your phones, TV's, and stereo's worse with that dish right on your back porch?
Bryce

::How do you know this? you are only repeating what you are told, explain to me how you know they do not "splatter"::: -GREEN-LISTERINE

well , lets think about this for a second .

i own my radioand setup .

i use my radio and setup .

when i use my radio and set up the only time i have had anyone complain i was "splattering" was when i was 3 blocks from his house . and was pointing at him .

my radio modulates at or near 100% , and i have the proper dead key and "swing" for my radio .i do not over drive it .

that is how i know MY xforce don't splatter

GREEN-LISTERINE i have yet to see anything resembeling any form of an intelligent comment or statment come from you .

i am at least an honest little knowing asshole .

you on the otherhand think your the shit ..... ignorance is bliss isn't it ?

We have one Siltronix 1011C in stock and for sale, it works but has some problems. The TX is intermittent, but it is in otherwise good condition. We haven't had a chance to repair it, so few of our technicians want to work on an old tube type. Either way, it's for sale for $125.00 and we'll pay the shipping. Call our toll free number to order (877)296-2097

You must be a man of MANY watts. Too many watts. But that's beside the point. I have skipped on AM from my mobile in Baltimore to California with "a lowly two pill". That Texas Star 250 will kick all those 225's and most 250's and a few 4/5 pills! I have talked alot of skip with a two pill from my mobile on the legal 40 channels. If I kept track I would have earned an 11 meter WAS (worked all states)!

" Man a WHOPPING 200 Watts sounding strong and sweet???? Im laughing my ass off!!! Maybe In the middle of the night ,In the middle of nowhere you might sound strong.... Spend some money DUCK!!!! " - cold beer

cold beer , once again ,some people here cannot put 2 and 2 together .

do you too have no memory ?

in a # of posts i have said i am spending more $. and getting a new amp .

but i am still staying small with my amps .

you do not need to be cranking out 2000 watts to be heard .

with 200 watts , at anytime of the day i can get contacts . . and get out locally .

why do i need more watts ?

so i can have a radio that makes toasters is brazil talk ?

the people i hangout with have out grown the compitition days of radio .actually i was never like that .

nope i am staying with a lil radio thank you

my dick is big enough for me to not have to worry about proving my manhood with other things .

Was there anyone using a davemade that keyed in Augusta ? Kinda hard to win if no one is there .Are you aware that BB set-up the 4 antennas on Taz's mobile? By him winning with the 16 pill class with a Bull-It 16 pill means his antenna system must have been working or he could have ran davemade amps and won as well.
And what happened in Atlantic City where the owner of X-force did not win any classes and 4 different people using Davemade won the 6,8,12,16 pill classes
this proves no one antenna system dominated the keydown when 4 different competitors win.
Personally Anytime an X-Force wins a class it is a win for davemade since it is the davemade design that is used.

Greetings!

Whoa! Settle down Dave/Debby...

[WIN.INI]
Prozac=On.

Dave, if anyone really cares anymore, the Pro-538 was not claimed to be junk, only a radio to avoid if you wish to use a power microphone.

As far as it being junk, thank you for the inclined insight, it is certainly not - and it's not one for "fooling around" with either.

It uses an Electret condesor element and the radio powers the element.

That was the point of the post, if he wanted a good radio with some tweaking and peaking done, the 538 will take a good number of mods to enhance the Final Driver area, and modulation is great on it.

The reasons to avoid it are due to the microphone being powered by the radio. It causes problems.

After a peak and tweak, what do most people do? Run a power mike - by experience, it sends up a red flag.

Now, if he wants a radio like that, fine - but he will have some problems with hooking up a power mike to that radio - and all the others listed too.

You have to disconnect the power that goes to the element, you'll have no choice but to use a power mike then.

There is not enough drive from a standard dynamic element to make the radio sound good. It'll have weak audio - so why waste the money?

A good tech can re-work the element so that it sounds better than any power mike. It can be done. Many don't care, or know how to do the right mod. It's done inside the radio and I've done it. The compliments that it gets makes it one hot little radio!

Read some of Professors older posts regarding the Electret Condensor in his design of a compressor.

The internal mods for these radios are as old as the radios themselves.

As far as Midland and Cobra, I can agree with you to a point, but
leave Midland out of same sentence as Cobra - oops...;-)

Cobras are a completely different ballgame. [Read: Post 1994 = Junk]

I still respect Midland, they have tried some ideas that aren't the
best, but they work better than you know who...;-)

If Midland went back to the basics and produced what they
used to, with real components, then they'd have a lot more
of the market share because of the failure of whatchamcallit.

Uniden still makes great radios and I will always
recommend a Uniden over a you-guessed-it, but Midland is
still better than that-no-good*other*company - at least it
works out of the box.

Which is more than what I could say about slave-labor-sweat
-shop-builders-of-expensive-paperweights-they-call-CB-radios.

So There!

I'd say we're in agreement...;-)

> the same place, etc, you'd ever tell any difference.
> 'Doc

Hi Doc,

I agree with you. Generally the larger diameter the coil, the NARROWER the bandwidth. A lot of people seem to think that bigger coils are broader banded. Take, for example, the Texas Bugcatcher by Henry Allen vs. the hamstick. The hamstick is a "sloppy" design compared to the old tried-and-true center inductor antenna. Since the fiberglas antennas are wound on small diameter forms with small gauge wire, it puts more resistance up in the coil. Imagine turning on a water hose and just letting it run. There is little resistance to the flow. Stop the end with your thumb, and the pressure increases. Same idea with a small diameter coil. All those electrons get in a traffic jam trying to get around all those sharp "curves". They get mad at each other and you have a kind of electronic "road rage" up in the coil. Since they are "hot" under the collar, energy is wasted as heat--especially if you are trying to force a lot of those electrons (high power) up that "highway" (antenna). I know this is simplistic, but I am just trying to make it

plausible and (I hope) a little humorous. Anyway, at 27 MHZ, it's not so critical as on lower frequencies, and the bandwidth of a particular antenna WILL be broader at higher bands, but, still, efficiency has a price: narrower bandwidth, not wider.

Best 73

Jerry

Greetings!

I use a rack - like those for Stereo equipment, for mine fits in there
and looks like it fits. It a Pro-810e AM/SSB base. Lay-Z-Boy not
included in the package...;-)

Pics aren't allowed in the NG - maybe someday I'll update my pages to
include my setup.

Probably one of the better things to use is a computer desk with a
hutch. The hutch, cubbies and the drawers can hold the stuff you need.
A good office chair will lessen fatigue for long qso's.

Use a good power cord with 6 outlets, so you can add onto and
expand if the needs arise.

Check to see if the closest outlet has 3-wire grounded plugs.
If not, upgrade it so it can offer some protection.

Greetings!

Class A is out of the question, it's only about 25% efficient.

Class AB, works for both AM and SSB - and can be the most reliable if it's treated right and allowed plenty of cooling. You can get 50-60% efficiency if the bias voltages are set correctly and matched pairs of pills are used. Else expect about 50% - conservative.

Class C doesn't use bias, mostly for FM use, and when you hear these amps operate, you can tell there is distortion. But, it is the most efficient of the three.

Class A runs all the time [Entire waveform is amplified] and it gets very hot. Macintosh Tube audio amps are like Class A amps - they get hot, but give clean signals.

Class AB runs about 65-80% of the time [waveform amplification] and is considerably more efficient, but does get warm fast and can overheat.

Class C runs about 50% of the time [like a rapid digital switch] and requires the use of filters to reduce the harmonics of these rapid rise and fall times.

Because of it's duty cycle, it's the most efficient of all three. Does get hot, and does produce the most amount of power or bang for the buck. But the drawback of this class is the amount of distortion they present. They are just plain noisy.

On Wed, 26 Apr 2000 14:50:36 -0700, while the modem was pondering it's navel, "Maveric169" <maveric169@hotmail.com> dissertated the following:

>> ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Needless to say, all of them come out of the same place and not all were built
by 123. As for as going to breaks, I did shoot the 4 pill class in Memphis
which is not a national break, but a well known break. I controlled the class

with a stock alternator and batteries for 2 1/2 hours until the batteries ran down, lost the final key. That problem has been fixed and will be at breaks to come. I also use 55 antennas which I think are the best. Davemades are good boxes also, I just like many others have their own preference.

You are right 10-7 on the antennas, thats why I have been in contact and doing just what 55 has told me to do on my antennas. Yep he did not have the antennas right and he will tell you that himself. Heck, he needs to stay there and build the units only since we flood him with orders everyday. Its a hobby and he likes playing just like anybody else. We have several Davemades here being rebuilt or upgraded by X Force now and they are from all over the country, wonder why? Yes they are the same RF Deck with a few changes.

Running a Astatic 575M6 mic on a President Lincoln. Works great. And
if you want good sound, get rid of the stock mic.

My son told me that he herd Elian's cousin, on the radio, claim the newly released photos of Elian with his father were fake. Her claim is Elian's hair, which was just cut, is to long in the photos. Much longer than it was a few days earlier, when he was illegally abducted by the Clinton administration.
Well, we just received our issue of Newsweek. On the cover are two pictures. One with Elian and the female agent who abducted him. And another with Elian and his absentee father. Also on pages 24 and 25 are more side by side photos. All I can say is, it is very apparent to me, that this boy has some very fast growing hair.
Now to beat a dead horse a few more times.
Something to think about.
1) Greagory Craig, Juan Gonz'alez's lawyer was "is" Clinton's impeachment lawyer. Who is paying for this very high priced lawer? And why?
2) Why is this the one and only" of possibly hundreds of cases", that the President and the Attorney General have taken a interest in? Or thru out history that any President or Attorney General have taken interest in?
3) A women forced to leave Cuba fearing for her life, was on the same boat as Elian, and survived. She has children still in Cuba. Why hasn't there been a public outcry about her loss? Doesn't she deserve custody?
4) Absentee father Juan Gonz'alez has " before Elian's illegal abduction" met "visited" Elian three (3) times. The last time was well over three (3) years ago. Juan and Elian's mom were divorced before Elian was even born. Its doubtful Elian knew what Juan looked like before all this started.
5) Why wasn't any of the family members arrested at the time of Elian's abduction? Take your kid away from your spouse. Refuse to give he or she back, and see what happens to you. Kidnapping, obstruction of justice, child endangerment? Could it be, if they were arrested, it would go to court. And in court, it would be found that the Clinton administration abduction was indeed illegal!

As I said before. There is much more to this whole thing than a parents right. Clinton, for reasons unknown , apparently, is in bed with Castro. And this must be his way to repay " prove himself?" to Castro . Who knows?
Just watch. Before the end of Clintons term, we will have normalize relations with Cuba.

Enjoy!

a amp that runs like a switch is a class E amplifier

half the time completely on half the time completely off

a class d amp runs almost like a switch but not completely
like one

my advice to the gonzalos family would have been to move that boy , because i knew this was going to happen. they could have done it , by surrounding the car with hundreds of people and walking out. that is my opinion. you do not dance with the devil. and for my second choice, it would have been a question to them. how serious are you about this? are you willing to die over it? and if their answer was yes, then a arms shipment to their house would have been in order. i would have included a couple of street sweepers, a couple of twelve gauge pumps, side arms, a case of m 60 frags, smoke bombs, a couple of 40 mm grenade launchers with plenty of spare ammo. and i would have found a dying cuban man who would not care if he lived or not and strap a satchel charge to his ass, and when they came up like they did, have him run at them and pull his rip chord and then start taking care of business and lay those bastards out. yep that is what i would have told them . incidentally , there would be no quarter given. i realize these folks have families, but they had no business doing what they did. they were outside the law, so in my mind, war is hell. any of their wounded would be shot in the head. yep that is what i think. hidious isn't it? and to think i used to be a peaceful fun loving kind of guy and look at me. bill clinton did this to me. how do you like me now????????????? oops fantasy is over, i had better wake up,.....cd is out......

I bought a replacement antenna for a Cobra HH-33 handheld recently.
Before I bought it, I asked the manager would it work on my handheld.
He told me that it would.
So I bought it, brought it home and put it on my cb, and it won't work at all
now.
I tried putting another antenna on it and it still won't work now.
Is there any way I can get Radio Shack to give me a new handheld?
Please help me

3783. FOR SALE OR TRADE.....YAESU FRG 8800 SHORTWAVE REC.

Newsgroup: rec.radio.cb
Date: 2000-04-27 00:00:00 UTC

Hello all, I currently have a "pristine mint" cond frg8800 receiver, the freq coverage is from .150KHz-30MHz. This receiver is capable of scanning any of its 12 pre-set memory channels or...it can scan between any 2 freq's programed into its scanning parameters. Modes of operation are: AM NFM WFM USB LSB CW. The agc is totally selectable (slow/fast), it has 2 24 hour clocks, one of which enables the radio to turn on/off at any time, so that you will never miss your favorite shortwave broadcast again. It also has the Yaesu "CAT" system installed so that you can totally control all functions and MORE from your personal computer, doing so will also give you unlimited memory channels! I originally bought this rig from Gilfer radio in New Jersey for $765.00 in 1984. my selling price will be $400.00, and as far as trades go, please E-Mail me with your offers but please no abused radios. My primary interests are "Vintage" C.B. Bases, Full coverage scanners, Modulators, and Amplifiers made by Pride, Thunderbolt, Blackcat, Elkin. Thanks for reading this post, ...Frank....73'

OK. In two words, *it depends*.

If you allow me more than two words, it depends on among other things:

a. if you like sounding like crap use Class C.

b. If your idea of an amp is bolting transistors to a heat sink and attaching only enough extra stuff to get a bad odor in and a garbage truck out by all means use Class C; it is about where bipolar transistors work anyway without having to bias them at all. Save them parts, your customers are bozos anyway. The jockstrap will more than likely incinerate them the first time he drives the amp into oblivion anyway.

c. Don't even think of limiting drive in any way. As the boys at Swan/Sillytronics said years ago, six db of flat-topping never hurt anyone.

d. If it does not disturb you to have the amp incinerate if the antenna does something silly, run the parts right at the bloody limit.

I tried to answer the question as asked. It is apparent that I did not answer the question he should have asked or would have asked if he had the slightest idea what he was talking about. As penance I will do six choruses of the French Mistake and repeat at least six times, "Don't Shoot Mongo, it just makes him mad. Ticket line forms on the right. Up on your toes, stick out your tuch. Happy now, Bill???

Not in the least Bill. You asked for the practicalities, you got them. You wanted to establish your superiority, I let you do so. No competition I can see from this end of the planet. Stopped getting churned about hobbies many years ago. If you care to consider it a competition: OK, you win.
Time for bed -- Byeeeee.

A very good friend of mine has a no-name 8-pill. I was just at his house 2 nights ago and we had it on his bird meter. with an x-force 3-pill driving it, it had a difficult time keepin that bird at 1400. I know for a fact by having run both of the amps myself that daves and x-forces sure as hell do better than that.

>>if you dont like the bowl or the people why the hell do you keep talking to
>>us??
>
>Now that is the question!

i am talking to the people with the crappy radios , never once have a
mentioned the bowl except in responce to you guys .

now if everyone in the bowl has crappy setups .... then i guess i am talkingto
the people in the bowl

but i have heard some good setups out there . i will admnit that , a few out
there seem to know what to do

you sure do have a paranoia about "the bowl"

and ONCE AGAIN i have to almost WORD FOR WORD repeat a post for you guys cause
you cannot figure out that if you remember what you read from the day before
you could carry on a CONVOSATION without repeating what you say each day to the
two morons that cannot remember squat

i feel sorry for the people in here that have to listen to me say the same %
times over and over to you icecold

to all you othere i am sorry

Not an easy area and not one I made sense of for a while. People and
civilizations are known more for their questions than their answers -- give
yourself credit for the question.

In one word.... NO..

If you'd like to access 2m SSB and CW, you can get a Ten Tec Transverter that connects to the out put of the 570 (about $150 for the kit), but if you're looking to use it on 2m FM repeaters and the like, it'd be far cheaper to buy a 2m FM rig.

You could write a chapter in a book explaining the different classes of amps. If you have no knowledge of it at all I would suggest visiting the library and checking out either an ARRL Radio Amateurs Handbook or William Orr's Radio Handbook. Both of these go into detail on the subject. Dumbing down an answer does not make it easier to understand it just makes it incomplete.

I'm sorry Bill, but you must have me confused with another person. I am not Brian Griffey, nor a control freak.

My name is Joshua Scott Buker, a computer tech and radio freak by hobby. I live in Anchorage Alaska and a simple traceroute/whois would clearly indicate that fact. I seriously doubt that your "Brian Griffey" lives anywhere near Alaska. I have seen posts by Brian and will abstain from passing any judgement on him, but suffice it to say that he is NOT ME.

Suggest you cool your jets and give the list a chance before you shoot a great idea in the foot (which wasnt even MY idea, I simply implemented it). Its discouraging that the first post we get here is attempting to shoot down such a good idea, but I'll assume for now it was an honest case of mistaken identity.

Thank you for your feedback,
grif@gci.net

In article <20000427034723.20821.00000857@ng-md1.aol.com>,
hamm4fun@aol.com says...

As I understand it Class A amps (regardless of type, an amp is an amp is an amp ---- it amplifies electrical input) amplify the input signal with a constant current draw. In other words, no matter whether your input is 0 to infinity watts, the amp draws a given amount of current. These are the most stable and accurate of amplifiers. Class A amps are most commonly found in high end radio applications and HI-FI systems.

Class C amps are the most flexible of amps, as they will operate thru a variety of volt/amperage power supply conditions. However thier fidelity is low. I/M distortion and THD is very high. Sadly I think most linear amps are of this type, esp the 225 Palomars (dont quote me) ;)

Class B are voltage limited and are not common.

Class A/B amps are very common in both audio and radio and are the best compromise tween voltage and current limited. They are used in both audio and radio amps due to high stablility, reliability, low noise, and flexibility.

Flame me if I'm wrong guys, :)
Grif

>a. if you like sounding like crap use Class C.>b. If your idea of an amp is bolting transistors to a heat sink and>attaching only enough extra stuff to get a bad odor in and a garbage truck>out by all means use Class C

You know, all this stuff about class C sounding like crap and being distorted is somewhat bunk. It depends on the particular design. Granted, some class C amps are trashy, some clean ones are operated incorrectly and end up trashy, but some are very spectrally clean and clear...
resonate 97% on frequency with extremely low harmonic and spurious emissions.
Are these statements you make just what you've read, or have you legitimately tested?

Who said it had to be linear. The thread deals with CB amps. CB
amps whether linear or not are still termed linear amps. And since
when are CB'ers interested in linearilty?

>> We all know that this is theoretical. However it is the starting

> 'Doc
I never said it was,.but it's still termed a linear amp.

Seeing how you've asked these questions and I have answered them
how about answering this one. Do you still think a class C amp is
betwwen 30 and 50 percent efficient?

The class B biased amps are LOW DRIVE AMPS. You can volt them somewhat, but be careful of input, remember the 25% ratio on AM.

This is a CB newsgroup the last time I looked. Many if not
most "CB linear" amplifiers are no bias or class C. If you have
problem with a CB'er useing the word linear in describing a non
linear device it's TO BADDDD. It's still termed a linear amp.

Besides if you have to be so polotically correct on the proper
terminology then explain this. Why do you call yourself a Doc?
Are you really a Doc? If not then you should have no problem
with the term "class C linear amp".

It's not suppose to be linear. It's just termed linear.

Since when is W5lZ a Doctor? Don't tell me. You're just termed a
doctor.

That is not the question. The question is when are you going to
admitt that a class C amp has an efficientcy more than 50%.

I get a few I can't fix...or maybe I should say I won't fix.
its just not cost effective... like if you get a 510 with a PLL
prob. cheaper to buy a new radio. unless they want to change
the chip themselfs...its hard to charge someone 40-60 bucks on a
39.95 radio..

hi dwight, you come to this news group and make anti USA/ Pro Cuba comments and you wonder why i ask if your communist? never once did i imply you were, i just asked the question and you got mighty defensive all of the sudden. you also employ the famous communist tactic of misinformation quite often in your post in response to people disagreeing with you, although your not near as good as stalin was. as far as being clearly libelous i seriously doubt it, not one time have i ever acussed you of anything except not knowing diddly about radios, everything else were just questions that you went over board on because i asked. you sure attempt in your responses to make it sound as if i'm harrassing you and stalking you and all these other type things, if the average reader that just happens read one of your messages may even belive that, but in a court of law that wont hold. they'll read my messages and yours and see how you attempt to paint me as a harasser when its really all in your head and non existent. any ways, you have a nice day.

Okay...

As for radios and amps, I've built a BUNCH of ham gear over
the years... does that count, or are you only talking about
CB gear?

As for antennas, my first homebuilt antenna was a 3-element
wide-spaced horizontally-polarized Yagi beam for CB, which
I built when I was a wide-eyed 14 year old back in the early
1970s. Can't tell you how many other antennas I've built up
over the years, base and mobile, ham and CB and scanner.

As far as having balls, I have 'em. REAL ones. Deal with it.

>Use your unused yellow and black wires, mount two micro momentary switches in
>the top of the mike, connect yel and blk to switches, and to pin 5&6 (I think
>that's the up&down).

The remaining two posts on each switch need to be grounded.
One short wire connects both of these posts and the second
long wire from either to the mic base. You're correct with
the 5 & 6 pin and the yellow and black wires.

If you don't have a problem with modifying the mic, you could
also drill small holes in the base and use micro buttons.

Sold at most electronics stores.

> What is a 'good' replacement mic
> for mobile?
> for base?

I have used the earpieces from an ordinary telephone
handsets with much success for years. Get yourself
a good one made by Western Electric, Lucent, AT&T
or others. Jap ones will also work, but not as good
on low freq response. Stay away from the teeny electrt
condenser mics. Thei're all junk and sound like
crap. If you can get a shure dynamic microphone
or similar, do it. Remove the capacitor, if present
from across the earpiece before connecting to the mic
circuit. Mic hot and ground connections to the two
screw-posts (which one you use) does not matter.
DO NOT connect the PTT switch circuits anywhere near the
earpice (..now microphone) it will blow it up.
You can find these for next to nothing at flea markets or
free in the junk pile for the taking at your local telephone
company service building depot. Most of the telco guys are
friendly and will give u one.

> Do you bleed your phones, TV's, and stereo's worse with that dish right
>on your back porch?

Good question Bryce, but fortunately the answer is a resounding "no".
This antenna is a great receiving antenna, and will work beautifully for local comm's, but it's design kind of inhibits DX work and will only handle up to 100W, so it's not the most efficient transmitting antenna... these indicators and my experience tell me that bleeding/splattering is a non-issue for this antenna.
Actually, the A99 only presented bleed problems the first few weeks I had it, and I had to go around and filter things, etc. It wasn't terrible, but annoying.
On the President, no such problems have occurred (though I'll admit, since I already had phones and speakers, etc., set up with chokes and filters, this may be why!)

I still have mine proudly displayed in my shack, For me it all started back in the early 60's when I received a pair of walkie-talkies for Christmas. From the first time I turned them on I was hooked! I heard people from all over the area and from time to time I would get a reply from someone. But for the most part I was shunned because I didn't have a callsign. So, like many others that started the hobby at a young age, I became the beneficiary of KQD-7815 via my Mom...I've seen the best and the worst of the hobby but it is still one of the greatest hobbies of all time. I have an extensive ham radio set-up but the only radio that plays constantly is my Browning Eagle! I like CB radio's so much that my collection consists of approx. 100 base and mobile rigs! From time to time I get a visit from an old time cber and they marvel at my collection and pick out the radios they used so many years ago. I started my own "memory lane" for others to enjoy! I posted an attachment of the base rigs in my collection, I don't keep track of the mobiles as I buy and sell them on the net.
That is my story...

A class C amp is definitely not linear. Linear means the output of the amp will faithfully reproduce the input signal. A class C amp is biased so that it conducts over less that half of the cycle so output is not an exact reproducton of the input signal. So by definition, if an amp is linear, it cannot be Class C. If you try to amplify an AM or SSB signal with a class C amp, you get high distortion. They are not ment to amplify those type of signals. Class A and AB are linear. Examples of Class C use are for FM or in AM with high-level modulation.

Tell me, since a class c amp, by definition, is bias beyond cutoff and
only conducts over less that 50% of the input cycle, how do you feed it
with a modulated signal, such as the output from a transmitter, and get
a good clean signal out of the amp? Where happens to the portion of the
input signal the amp does not amplify when it is in the cut-off state
over more than 50% of the cycle?

I'm currently using a Hustler 5" magnet mount (100 lbs of pull), with a 4' firefly antenna on the roof of my car. SWR is around 1.3:1 across all 40. I haven't had any wind problems so far...the antenna makes a LOT of noise going down the road; the Hustler HQ-27 I had in its place was much quiter. The magnet is suppposed (according to Hustler) to hold stick antennas up to 4'. I was reading worries about the magnet detaching; use one of the Firestik barrel springs between the antenna and the mount - the spring will allow the antenna to move & (hopefully) keep the magnet in place. I once tested a 7' firestik with a SS-3M spring on the mount; it actually held at speeds up to 40 mph (the antenna was almost horizontal though) - I don't recommend anyone try this, the magnet's not rated for that much antenna. Hope this helps, Omar.

I bet you wouldn't want to tackle the job of pulling a 2510 ROM, then pulling a 2600 ROM. socketing the 2600 chassis and putting in the 2510 ROM in and doing the mod..... I had a junk 2510 and a new 2600. It was quite a job, and wouldn't have been able to do it without my Pace. I also wouldn't undertake it again for any price; easier to get a Chipsitch.

There is a concept called the point of diminishing returns that should apply to cases like this.

Or as in the case of government procurement "The Triumph of Spare Parts Availability over Common Sense."

David

I have a Cobra 25LTD mobile CB Transceiver for auction.
This is the last day. There is NO reserve!

Check it out:

Hey look, He lowered his price!! Last week it was $85.00 now it is $75.00! If I wait a few more weeks I should be able to get it for under $25.00!! About a month ago I bought a Palomar 255 at EXPORST R US for $69.00!!

I would agree with Texas Star being one of the better units, but not the Elite Series. The Elites are class C and if they were class AB1, the wattage would not be there for sure. They claim to be AB1 biased, but they are truley class C. Personally I run the X Force units and they have been trouble free and that is why we also sell them.

A couple years ago a friend of mine picked up one of those for $20 at a flea market...we brought it to our regular shop (still in business, I was there yesterday) and they were able to mod the hell out of it...I know for a fact they peaked it out around 12w AM/ 30W SSB, modulation wide open, and I think they were even able to add extra channels and mount a freq counter on top...all for $75 plus the cost of the freq counter. I will ask my friend if he still has the radio and what they did to it. If you'd like to discuss getting in touch with the tech who did the work you can email me.

Source record: 33328

Don't think the D104 has enough wires. Mine has either 3 or 4, just audio and key. Most newer radios have rx audio on the mic jack that is switched to mute the rx during transmit. This is not to say you can't make it work on these types of radios. You can make an adapter box. The box has a relay driven by the push to talk on the mike and then the contacts on the relay simulate those in whatever mic you are using. The box is also useful for keying amps, injecting tones, processing TX and Rx audio.

3879. Re: Magnetic mount.. are they really that bad ??

Whenever my wife and I have to take two cars for a long distance she uses a magmount with a five foot top loaded antenna on her Cherokee. It set in the middle of the luggage rack and I run two fiberglass rod across the rack. One infront of the antenna above the rack and one behind the antenna below the rack. This works good to 80mph.

Source record: 33330

I too have a Hustler 5" MBM mount. I had a five foot firestik II with the spring on the roof and lost adhesion at 70 mph. I drug the antenna down the road for a 1/2 mile. After a new tuning screw, top cap, and some electrical tape to repair the cracked PVC the darn thing still worked great!!! Now I'm using the mount on the trunk lid with a Hustler SS spring and Francis Amazer 96" whip. For extrapotection I have an old 5" K40 magnet on the inside of the trunk lid directly under the Hustler mount magnet and the coax is zip cord tied to the under lid as well. So far it hasn't moved at speeds up to 85.

Source record: 33334

I have a 2950 with the mods done. I haven't experienced the co-channeling that has been mentioned (yet?). I am happy with the 2950 and I went through what you are going through making up my mind. I haven't owned the Lincoln so can't compare them. I have been able to DX
quite well with the 2950. I get the best reports I have ever gotten with it (before I was using a modified 148). There are a lot of things about it I like (especially the fact that it displays CB channels as well as frequencies).

Here are two things I don't like about it, but they only come into play when you're mobile.

1. The knobs are clustered together on the right of the radio. Makes it difficult to make changes while driving.

2. The outer control on each knob is just a "ring" making it hard to adjust while driving.

Both of these things are minor but can bring out a few curse words now and then. If you use it as a base they are no problem.

I made up my mind based on what "local" techs told me. I asked them which would they buy, a used 2510/Lincoln or a new 2950. They all said 2950 except one. They gave me various reasons. The "used" vs "new" was not a fair comparison of course...but that was the choice I had at the time.

It is bunk only because bi-polar transistor amps are 'naturally' only barely beyond Class B -- by the amount of the give-or-take 0.7 volts forward it takes to get them to conduct at all. The engineering purpose behind the lack of bias circuitry is called in real technical terms 'cheapitude'. Just how linear they are at that start-up point is device-dependent but likely not all that good.

There is no way that a device drawing current on less than half a cycle -- the very definition of Class C -- is in any way, shape, or form is linear (i.e. the output is a close representation of the input signal). The more classic Class C approach is to draw current on about one third of the cycle, 120 degrees, which is what you will find in broadcast transmitters (and yes, I do have some experience with them) for no better reason than a tank that can store the power to fill in the other two thirds of the signal tends to be big and expensive. It gets out of hand rapidly if you get greedy.

It was kind of cute, when tubes like the 807 (essentially a 6L6 with a plate cap) that would normally do 40-50 watts or so were available for ten cents a pop, to bias the crap out of them, drive the socks off of them, and run 400 watts or so just to say you did it. The champ was a guy out of Raleigh NC who managed close to 800.

Distortion matters. It matters because a mathematician named Fourier once proved that even the silliest looking waveform can be expressed as some combination of a sine wave and its multiples (harmonics if you will). Any time you distort a signal, you WILL generate harmonics (useful as hell if the object is to use them as frequency doublers or triplers as is common with FM broadcast transmitters and older VHF/UHF mobiles) that can get you in trouble if they are not dealt with.

As I noted, most of the trash masquerading as CB linears is Class C only barely; current is drawn more like 160-170 degrees and only that because unloading hardware on the dimwit customers at minimum cost is the real object of the game -- lets you leave out any attempt at proper biasing and those expensive parts. All the spurious crap, parasitics, harmonics, whatthehell-- looks the same on a wattmeter. Kind of like bathtub gin or meth from an abandoned garage.

Given the economics, it seems that holding a serious discussion of backyard linears is one giant navel-gazing exercise. I've had enough.

Dick

well if my memory serves me correctly , i was under the impression that you key down types load up your dead key and let it swing backwards. i was also under the impression that the dead key carrier was very important at these events. but i talked to some around the casa and they said that they use to give it a good dead key , but still had forward swing, but however after reading the various arguments on here about it sometime ago , i was left with the impression that it would be a good idea , at least sometimes, ...cd is out.....

Here is where the class c proponents will argue that the "ringing effect" of the tank circuit restores the waveform so class c works with just fine amplifying a modulated signal. The thing you can't seem to get across to them is that sure it does restore the rf sine wave portion of the signal, but there is not enough capacity and inductance in the tank circuit to have any effect on the audio portion of the signal. And even if there were, the audio waveform is a complex waveform, not a symetrical sine-wave, so how would the tank circuit possibly know what the missing part of the audio wave form should look like? An example: show someone a drawing of the upper one third of a sine wave, and anyone who knows what a sine wave looks like can fill in the rest as a sine wave is symetrical, but show them a drawing of only the top third the complex audio waveform of someone saying the letter "A" and ask them to complete the drawing and they would have no idea what the rest of the waveform should look like. Same for the tank circuit as far as the audio portion of the signal goes.

3892. Re: Magnetic mount.. are they really that bad ??

Hamm4fun,
No, magnet-mount antennas are not 'bad' at all, you just have to rememebr that they do have limitations. The two 'biggies' are the strength of the magnet holding the antenna on the car, and the amount of power a magnet-mount antenna can 'handle' before the 'vertual' ground connection breaks down. Other than those, they work very well.
'Doc

PS - The idea about the magnet inside the trunk is great! Wish I had thought of that.

Will,
For an 'off the shelf', stock radio, probably the 'best'
selection criteria is price. 'Cheaper the better'. When
you start looking at individual features, who cares if it
has 'gold' knobs?? Most CB radios have the same features.
Any differences are minor. For 'just screwing around', do
you wanna spend $50, or $300???
'Doc

you guys have all the fun with this you want to, but the facts are a small boy is now being brainwashed by castro's goons on us soil, under the auspicies of a us president and his lawyer. he was taken without cause from the residence of a american citizen in a illegal predawn raid by people who are trained to do such things. who were these people? they were not these goofy border patrol agents. no sir, they were a special team of people. who were they? now if you think this sort of thing is funny , then you deserve what happens next. this boy belongs with his miami relatives. not this guy who says he is his father. i have sat here and read this bullshit posted by some of you idiots and i would have to say , it makes me know why , world wrestling federation monday night raw is the most watched tv program , on tv. if you are unable to see what is happening here , then my condolences to you . it is a hard thing to be a citizen. sometimes it might even require a little work and thinking on your part. but alas, there are many who have taken the crumbs handed out by this socialist government and have been made happy. just remember that everytime you receive something from this government , there is something required of you. the dumbing down of america has been most successful obviously. i personally do not now own a gun , and have not owned one for over thirty years. but i tell you this. do in large part to what happened last saturday morning i am going to join the nra. yes sir, i am , and i am going to start collecting things that go pop, you know. and i am not telling those bastards in the us government what i am doing either. so go ahead and have a laugh, sit down and eat and be merry, while a little boy gets abused by our government, just because bill clinton wants to add to his sketchy legacy list, some kind of change in relations with cuba, the last openly communist country in this hemisphere. i do not know why castro wants this little boy back so bad, and in such a hurry. with all the people who leave his fairytale little island, he wants this particular boy, it is puzzling. there is something strange about all this. castro and clinton, what a crew, what a crew, the last 8 years have been real , no doubt, no doubt about

it. it will be so nice to have this piece of human debree who never should have been president out of there , so the place can be fumigated. hopefully he will leave peacefully, only time will tell, ...cd is out...

How about you each stand in-front-of your
antennas while keying down? This way we can
find out if 27 Mhz RF can heat biomass like
microwaves can :)

3916. weird.. changed mount SWR shot up..

Newsgroup: rec.radio.cb
Date: 2000-04-27 00:00:00 UTC
From: "A. H." <a0h9065@labs.tamu.edu>
Message-ID: <3908AAA4.FF29134E@labs.tamu.edu>
Source record: 33416

Hello !!
If you read the newsgroupd then you probalby know about the agony I have been, and still am going through with trying to get a good antenna setup working on my Ford Explorer. I still have not been able to get the 4'FS II working yet, doesn' matter what mount I tried. I even ordered an 18' coax from Firestik to see if that helps, but it has not gotten here yet. So today I sepnt come time messgin aroung, also because i got in a ew mount. i had a firstik SS 3 way mirror mount on the luggage rack with 12' of valor coax Firestik stud, and a Midland 77-115. Well I got a new Valor aluminum mirror mount, because it has 4 bolts instead of the just 2 I can put in the firstik mount and thought it would hold the antenna better. It held great, but the SWR shot up from about 1.3 to about 3+. As said I am running it grounded only by the coax, because every attempt I make at grounding drives the SWR up past 3. The new Valor mount was in the same place, even with the Firestk stud (although I did try the valor stud and it was worse). And i just can't figure why the mount (not even the stud) change would cause such a drmatic hike in SWR ?? Any suggestions ?? feel free to ask any questions.. e-mail if you want or post here...
Thanks

3917. Plastic Crimp connectors

Newsgroup: rec.radio.cb
Date: 2000-04-27 00:00:00 UTC
From: Jason Boswell <mbosnospam@iastate.edu>
Message-ID: <8eaaai$10p$1@news.iastate.edu>
Source record: 33417

In my install of my own palomar 225 I used plastic crimp connectors and 14 gauge wire using these components is this amp seeing all of its potential. I also grounded the amp to the bracket for the front seat on the truck this is also where the radio is grounded. I have heard that you should ground the chassis of the radio and that the amp should be grounded to the battery and plastic crimp connectors should never be used. Are these things true or are they myths.

Trying to get a foot in the door and have
some good sounding long distance
fun in this great hobby

Now I will shutup, listen, and hopefully learn.

Boswell.....

the 14 ga wire has got to go.....use 10 ga.....the crimp
connectors are ok for that small of a box but do yourself a
favor and solder them also.....
yes the grounding of both units is important. thats why the amp
has a smaller black wire on it. they expect you to give a
chassis ground also.

Jason,
'Crimp on' connectors are not a good idea. Especially when dealing with high voltage or current, it's better to solder the connections. The dc power lead to any high current device (amplifier) can never be too big (till you can't afford it, anyway)! It may not be much, but small size wire will 'use up' a little current, and tends to get hot under heavy loads. Do your self a favor and jump at least two wire sizes from that #14 (4 wire sizes wouldn't be too big).
'Doc

Source record: 33420

don't use the luggage rack....piss poor place, no ground....use
a fender groove mount on the front left fender a foot or so from
the windshield.... also if your swr shot up that much then
you probally have the plastic washer on the wrong side of the
mount...

your antenna will look better on the front hood anyway...

> raid by people who are trained to do such things. who were these

Without cause? Since when is it illegal to send a non-US citizen (illegal alien) back to his home country, or to reunite a child w/ his dad?

> people? they were not these goofy border patrol agents. no sir, they
> were a special team of people. who were they? now if you think this

Members of all types of law enforcement entities routinely train for hostage situations and riot control. Border Patrol agents are law enforcement officers, and as such, have been trained for every possible scenario. And they executed it well.

> it is a hard thing to be a citizen. sometimes it might even

Socialist? The USA? You've never been to China have you? We have unbelievable freedoms here -- that is, for those who are here legally. In some countries, it's illegal to own and/or use a CB radio. How would you like that?

> i personally do not now own a gun , and have not owned one for over

"A. H.",
Just for 'grins', put an aligator clip on the end of
about 8.5 - 9 feet of wire, then clip it to the mount.
Did the SWR go up, or down, or stay the same? It sounds
like your not getting a very good ground. The 'coax'
ground isn't going to work.
Do you have a magnet mount? Try that and see if the
thing has a reasonable SWR. If it does, the the trouble
would seem to be in the 'no-ground' mount.
If nothing else works, 'cuss it some more....

curious_dan,
You are certainly entitled to your opinion. The facts remain, the U.S. relatives were defying a legal court order, they had been warned numerous times, they had said that they would not 'give up' the child, they had infact hidden him on at least one occasion, if you are going to do something like the 'raid' the INS did in Miami, with the attitude of the family and general public to consider, you had best do it as it was done. "Overwhelming force", yes. Excessive force, no. The INS 'done good' as far as I'm concerned. Your 'without cause' is bovine fertilizer. Do you honestly think that being in this country should take precedent over a parent's right to custody of his/her child?? Leaving the legal aspects of that alone, it's also highly immoral.
If you wish to join the NRA, please do, but I think your would be doing so for the wrong reason. If you don't join, that's no problem either (life member so don't have to pay dues anymore, or for the last 38yrs). Your decision won't affect me one way or the other.

Use 10 gauge or better. Solder and shrink wrap is much better then
crimp connectors. I use 4 gauge and BA wire nuts connect my stuff
right now, but I'm going to get some welding disconnects soon.

Cool

16 volts x 131 amps = 2080

1300/2080 = .625 or..... 62.5% efficient

You're a damn fool. Look at my email address. The "sccoast" stands for "South Carolina Coast." I was born in North Carolina (you've read that on my web page) and I'm living in South Carolina. If I were seriously slandering southerners, I would have to be doing that to myself.

Source record: 33443

BO,
The antenna Desperado sells is made by Monkey. It looks like a
55 but it has brass fittings and the coil is attached different
and has no ser #.

The 55 is very lite weight. Each 55 has a ser# on it and no
brass fittings.

Monkey made antennas are good and Desperado is a real great guy.
But what he is selling is a $ 65.00 and $ 75.00 monkey made
version of a 55. It is not a 55. There is a differance.
73,
Bean

I would also like to congratulate you on a job well done. I like being able to stealth my setup also. How well do you think it would work if it was mounted inside the residence a few feet away from the tranceiver. I have took my wilson 1000 and stuck it to the bake oven door and set the radio on the table. Cant really say how well the output was because all the trafic was local city trafic. But I got out to them fine. I have know idea if it bled over on the guys down stairs, but I never heard any complaints unless they just did not know were it was coming from.

Buy a stud extender, it is made for side post batteries. Use a ring
connector and fuse it right at the battery, add a ground wire from the
battery to the frame. ground the amp to the frame under the cab.

Yeah but would you have any audio, and what kind of current does the amp draw with a big carrier like that? keep in mind that massive amounts of current across transistors is not recommended.

I prefer to swing.....

3954. REACT Team Needs Help 11m ant

Newsgroup: rec.radio.cb
Date: 2000-04-27 00:00:00 UTC
From: KCR-308 <react@usa.net>
Message-ID: <8eb3kk02miv@enews3.newsguy.com>
Source record: 33454

My problem is that I am a REACTer living on a Navy Base in Lemoore CA and our new CO has decided that he does not want antennas on HIS base. I am trying to find a low-profile 11 meter antenna that does not suck. Any ideas on where I can get one or a good home brew idea that will help us out. For now I have my Antron-99 sitting on a angle in my back yard low enough to keep it below my 5ft fence.

Thank you
Kurt

i realize desperado is selling monkey made antennas it is a similiar
situation
to how xforce sells a copy of the davemade amp .The brass fitting or not the
performance
of the antenna is the same, serial # or not they are much cheaper than the
55 antenna.

StateoftheArt.....You are 55 in disguise i emailed you about the 200 amp
alternator you were selling
and you said you lived in florida....You are trying to badmouth
desperado...get a real computer and get off webtv...

A REAL NEWS Story flash !!!!!!!
Yep, in a communist country you only have 1 antenna company. In the 20's, we had 2700 car American companies, I heard. Now there is 3. Barjan, which bought Wilson & moved it to Ill, recently bought Francis Antenna Co. too. Will they stand up against RED CHINESE made trash? Or is all their stuff going to be made there too? It is a sad state of affairs where we are witnessing the communizing of Amerika, where there will eventually be 1 CB antenna co., 1 CB radio co., 1 CORPORATE CB STORE, 1 of this, 1 of that. I hope you like your govt. controlled "economy." I don't. Give me the 1900's, I say! 2 Chron. 7:14 is the answer. Multiple companies owned by the same people IS a monopoly. In a Statist economy, all will be given to big brother. It is sad to see family run & owned companies go BYE BYE and get bought up. I believe the communist buzz word wor this is "downsizing." CB History musers please feel free to post & spew, while we still can. This may be a "hate" post in 2525 !!!!!!! Dave!!!!!!!!!!!!

Brian, your Mark Nine dates back to about 1965-66. The Mark Nine is an upgraded version of the Mark Eight and includes a switchable combination "S" and relative RF output meter. The Mark Nine was sold primarily as a base station, with the solid state Mark 10 marketed as the mobile unit. Your set listed fpr $114.50 in 1966. Here's a picture link to a Mark Nine

Scott,

I found some nice welding disconnects at a hamfest recently that were really neat. They were designed so that you could "gang" as many together as you need. They snap together and come singly in red and black for easy color code ID. About $2.00 per unit. Think I'll see if the guy is at Spartanburg, SC hamfest tomorrow and get some more for future use.

I love GM cars....except for those pesky side posts! I never saw any reason for this. The best way, really, is to either cut the EOM connectors off and replace them with the aftermarket ones that have bolts holding the wire, or convert the whole thing to top post batteries. For low amperage stuff, Radio Shack sells a little "thingy" that lets you use those crimp connectors. But, again, that's just for light weight stuff. I've been meaning to convert my posts, just ain't got around to it!

Jay,

I truly don't want to beat the coax length thing to death, but I have asked a question on other boards/newsgroups, and no one has ever answered it. I use a mobile antenna on the ham bands that is called a "screwdriver" because it uses a Skil cordless screwdriver to tune it. The motor is converted to 12V and connects to the bottom of the loading coil via a threaded rod. The thing is infinitely tunable to ANY frequency between about 3.5 and 54 MHZ simply by pressing a switch to move the coil up/down within the mast. Springy "fingers" contact the coil all round at the top of the 2 1/8" mast to maintain electrical integrity. I run a jumper of about 10 inches from the antenna mount to a Messenger M4V amp. There is another jumper about 12" to an antenna changeover relay, and another about 15" to the radio. In addition, there is another run of coax of about 9 feet up to the front of the car, which is attached to the other side of the changeover relay. This is so that I can switch out the amp and tune the antenna to frequency using an MFJ 259 Analyzer. As you know, having an amp in line can give some funny readings when trying to resonate an antenna. (OH, BTW, the radio and amp are in the rear of the car). To tune the setup while driving down the road, I flip a switch which switches the antenna up to the analyzer. The instrument is set to the desired frequency, and emits a tone. When the coil exits/enters the mast so that the required number of turns are exposed, as it reaches resonance, the tone will reduce to a barely audible buzz--which lets me know that I am close to ideal. SWR varies a little from band to band, but is always under 1.5/1. The point is really this: If the coax length thing were true, I would have to have 8-10 pieces of coax running to the rig to get it to work, and some of them would have to be MUCH longer than the car itself. This, of course, would get really awkward, right? Yet I have tested the system with analyzer and a field strength device to see if the coax length "gospel" were true. Each reading on every band yielded the same results, and the field strength remained the same even if the lengths were changed. This system (I built the antenna and came up with the tuning method for safety reasons--don't want to be looking down while driving down the ole interstate)has yielded contacts from Russia to New Zealand with compliments on a good sounding mobile. It isn't meant to start an argument, but from my own experience, while current nodes, as well as other factors, do exist, they have so little bearing on a system's performance as to not be worth fooling with. If the coax length stuff were true, then MY multi-banded station would not work, and would not be practical due to all that feedline in the car! Just my HO.

Mike,

That center screw is where the coax is attached. There's nothing new about that. Crimp and solder a ring connector to the end of the center of the coax and screw it onto the bottom of that large threaded "bolt". Do the same thing with the braid, and attach it to one of the 3 smaller bolts that attaches the body of the mount to the Jeep. Check to see that there is no "short" between the outer and inner leads of the coax, and you should be in business.

Omar,

Springs also have the disadvantage of de-tuning the antenna by allowing the whip to flop and sway all around as you travel thus causing the SWR to fluctuate wildly. This is particularly true with high "Q" antennas due to their inherent narrow bandwidth. Another disadvantage is that, over time, that braided coupler inside the spring will corrode or break, and create noise in the receiver. If you don't know to inspect the spring, it'll drive you nuts trying to locate the mysterious noise, All these effects are not as bad on 11 meters as they are on lower freq-uencies, but they CAN impact the performance of your system. If I can, I avoid the use of springs. Just my thots.

Mike,
The only thing I'd add to Terry's post is to weather
proof the coax where the braid and center conductor are
exposed. Little 'dab' of silicon sealer should work fine.

Guys,
I don't understand you all. Why do you run all those little
white transistors at 18+ volts. You can run a 4cx3000 or 10,000
get a lot more watts than those little white things.

The plan truth is AC is were it is at and as soon as you all
decide that you want to really get it you will too. Stop looking
for what just not there. If it was radio stations all over the
country would be useing solid state transmitters. If you want
big watts than tubes are the only way to go.
The rest is just a mute point.

3985. Re: class c amps ? b amps ?

Newsgroup: rec.radio.cb
Date: 2000-04-28 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <3908d57d.2873802@news.iserv.net>
Source record: 33457

Greetings!

Class E is just that, for CW - pulse drive. You drive the amp into saturation for the purpose of full pulse with very little dampening except past the output network and into the filter section to at least obtain a waveform.

Class C attempts to linearly amplify the signal from the point of conduction to the SOA and then into simply a switch. What makes Class C even possible to produce modulation is due to the dampening capacitance used to obtain a curve instead of a spike thru the network and swamping of the inputs with resistance to obtain some impedance and input control. Class C designs attempt to operate in the linear region of the transistors conduction band, and within the SOA.

View a screen on a Class C and compare the Class E to the Class C - and you'll find they are very similar in pattern when producing a carrier.

Only Class E is the utilization of what Class C does normally, only not linear. The output is full pulse, no attempts at linear amplification. Class C is "linear" - but that is left open for interpetation.

Remember the questions that were asked.

On Thu, 27 Apr 2000 01:54:23 GMT, while the modem was pondering it's navel, n9wos@worldnet.att.net (n9wos) dissertated the following:

3986. Re: weird.. changed mount SWR shot up..

Newsgroup: rec.radio.cb
Date: 2000-04-28 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <3908da2e.4074642@news.iserv.net>
Source record: 33458

Greetings!

Nope something still ain't right.

Are you sure you're putting the mount together properly?

Use a mono-spaced font like Courier to help see this...

```
__| |__
__________________[__________]___ <------Nylon Washer on top
| | of mount?
| ----------------.========.----
| | [ xxxxxxxx ] <<-----Coax connector at the
| | [ xxxxxxxx ] base of the SO-239
| | [ xxxxxxxx ] connector?
| |\ \ -------- / And screwed on tight?
| |] Bolt | |
| |/ ==========
| | Both these \ /
| | bolts are \ /
| | grounded ======
| |\ to Truck bed? | |
| |] Bolt | | <----Coax going to the radio.
| |/ | |
| | | |
----
```

I'm giving you an edge-on view from the side.

I'f you're getting 3+ - are you sure you have the nylon washer on the top, Insulating it from the ground? The bracket goes to ground, the stud on top, uses the nylon washer to keep itself from going to ground. The coax shield [outer ring] goes to ground and shows ground at the radio side when checked right?

This is what it sounds like, an assembly problem.

When you say truck bed, are you using an edge rail, or are we talking on the flat bottom of the bed?

You never did get back to us on checking resistance using a VOM. Did you ever check to see what kind of ground you are getting?

Maybe we're missing something, refresh our memory!

The 10 gauge and the wire nuts are what we would use for a small amp. Also the 10 gauge wire would be a multistranded wire and not just 10 gauge primary automotive wire. Remember the more constant the amps with a proper ground will deliver better efficient wattage.

>Use 10 gauge or better. Solder and shrink wrap is much better then

Think you missed that class Steve keying 7000 watts backing it up to 4500
doesnt mean
you are talking 2500 watts the same goes for keying up at 3000 and talking
5000 doesnt mean you are talking 2000 watts
Personally,i would take the 3-5w going forward first off since you are
holding 500 watts
more right off the bat than the 7kw-talking 4500

A Hewlitt Packard Spectrum analyzer is not a wattmeter. That was my point, have you personally taken a late model DC amp and tested it for spectral purity? I think you are quoting text. Maybe these are called class C, but are actually closer to B. Whatever the case may be, they (some) are clean and clear wether you fellas like it or not.

A mint FT-101E is worth $350-$400, so his price isn't that unreasonable. The weak finals are a minor issue. A couple of scratches aren't. Motorola tubes are as dubious as the GE, Sylvania, and other new "American" ones I have for the 101E I'm selling. The only really good ones I have are brand new NEC's. Only the Japanese tubes neutralize properly in the 101's without changing a cap to use American tubes.

That's fairly difficult to answer, if only because I don't know what the exterior environment is. It ought to work as well as the Wilson, if not better, but I really couldn't say. I haven't tried mine indoors, maybe I should check that one out just for kicks! :-)

I know this is a little off the subject at hand but I would like to comment on the USA founded as a Christian nation which is true. And is a Christian nation as far as the majority of the citizens go. But that is not the case with US leadership. passing laws to keep christianity out of schools. I think it is down right communists of the US leaders to tell the parents they can not put up any monuments that has any religious symbols or words for their children gunned down at columbine. So I guess Im saying or leaders are not loyal to the US. So I dont think one little pinko is going to make any difference

4011. Re: weird.. changed mount SWR shot up..pt 2

Newsgroup: rec.radio.cb
Date: 2000-04-28 00:00:00 UTC
From: "A. H." <a0h9065@labs.tamu.edu>
Message-ID: <39092134.C6C936CE@labs.tamu.edu>
Source record: 33483

OK.. here is quick refresher on the situation
I have a Ford Explorer Sport...
1) First I had a RS External coil type base laoded antenna with a mag mount, which worked relatively ok. but noisy reception and pretty short range.
2) Then I got a dual FS II 4' kit, but realized that the two antennas would be too close (~2.5ft), soo only ended up using one.
I condidered drilling a hole in the middle of the roof, but don't have enough room up there without the whole setup looking really bad, so I decided to put the three way SS mirror mount on the luggage rack...
Now I DO realize that is is a shitty ground, in fact with just the mount on there, there is no real ground. I was told that I could solve this with a wire 12ga or higher running to the body. I did that. There is a good ground with the body. i checked it it at least 5 places from around the wheels, roof screws, dashboard meal parts, and a few other spots. and it's all good.
3) I put the 4' FS II type antenna in there, I get a SWR of 3+, I mess around with the lenghts and find no change..
4) I go to firestik's website and go through their whole SWR troubleshooting guide that tests for all the shorts in the system. I went through the whole setup checking for opens and shorts with a multimeter in the continuity mode (both at the mount and radio end). It all checked out fine. I made sure I put the mount together ok, and I did.. here is the way it's set up.. antenna - coupling nut - metal washer - plastic washer - mount surface - coax connector - coax - radio (when I did try to ground with a wire, I attached it beween two washers on one of the bolts of the mount and ran it either to a grounded bold in then roof, or bolted it interiorly to an exposed metal surfacefor attachment and the connection is continousand solid, not loose) There is NO continuity between the whole "antenna + coupling nut" setup and the mount.
Is it possible that I blew the SWR meter ?? I really doubt it because it does give good reading with the luggage rack setup above (no ground wire) with the base loaded antenna..
anything I miss ???

4012. Re: wierd, changed mount SWR shot up.. Pt 2 cont..

Newsgroup: rec.radio.cb
Date: 2000-04-28 00:00:00 UTC
From: "A. H." <a0h9065@labs.tamu.edu>
Message-ID: <39092343.2B6454D5@labs.tamu.edu>
Source record: 33484

Sorry.. I didn't finish the whole story
so today I got a Valor mirror mount, cause it has 4 botls and thought that it would keep the antenna stronger, which it does. But even with the mount being in the same location, with everything else exactly the same it has a higher SWR than the Firestik mount. I mean I even used the firestik stud.
Anyway.. I wanted the antenna on the roof cause I heard that that's the best place for it.

I will try to get some pictures up on a webpage next week, so you can do a visual on the setup and see what sticks out.
Thanks..

Hello, this may seem like a very stupid question, but it is one
that I feel needs to be asked.....A friend of mine has an Antenna
Specialist PDL-2, used very little....still in excellent shape..... I
want to buy it, but i'm wondering if it is horizontally polarized, like
other quad-loop beam antennas......I see on it that there is only one
gamma match.... Is this antenna a horizontal beam, or a vertical??
My friend says it shoots skip real well, (that's really all he did
with it..) I want to talk to people with vertical sticks (i.e.. Antron
99s, big sticks, etc..), about 15- 25 miles away.....its going to be in
the air 40 feet, and will have a Texas 350, and a Galaxy DX2527 behind
it.....Will this setup work well???

Ps ---I know I need a rotor.....

That horizontally polarized antenna will, in all probability, disappoint you performance -wise when talking to vertically polarized stations via ground wave. Typical signal degradation due to mismatched polarity is up to 20db...

I wouldn't pass up the antenna though... quads work VERY well if designed properly... and you should be able to change the polarity of the quad VERY easily with only a little effort.

Do you sleep with that HP or merely worship it?. Of course Class C amps can be spectrally pure -- the techniques for doing it go back to the Hoover administration if not back to KDKA. It is only of recent years (say 10-15) that spectrum analyzers were general issue so poor techs had to use brains and scopes. Have I done it to a late model DC amp? Yes and no, yes I did but no not on 27 Mhz; I try to limit my teching to legal stuff with someone's name on it. BTW I do not earn a living at it anymore. Solid state Class C amps are nothing new; ask your Motorola man about a Micor. (He will probably do an imitation of a cavalry sergeant but for other reasons). Incidentally, leaving the DC on an amp without drive in the presence of other units on nearby freqs can cause your DC amp to play mixer among them and really generate crud, fortunately at low levels but hi enough to be a pain in the drain.

Having made the unit spectrally pure at reasonable drive levels is in a lot of ways the easy part of the battle. The clean part is no big deal, the clear part is another horse. Voice is usually about a 30% peak-to-average ratio; do a little compression and processing and the ratio can go to 60% or so. A lot of power supplies poop out under that sort of load and you get the effect of the nimnil that wires his mighty sub-woofer to the battery with some zip cord lifted from mommy's discarded extension cord. The peaks turn to mush. Similar effect from over-drive until the smoke gets too thick.

A spectrum analysis from a nice 50 ohm dummy load is one thing. Devices with higher gains tend to be prone to parasitic oscillation at end points particularly into non-resistive loads. Beam tetrodes had this problem in TV sets by the bucket load with a bit of fuzz called for some reason a Barkhausen along usually the left side of the picture; years after it was cured it reappeared on the solid-state sweep systems of the 70s. The ferrite beads are not on the HO trans for giggles. A good lab will run an amp into all sorts of goofy loads and operating conditions; I doubt that all came with the instruction manual of the HP. Stability at ideal condx is one thing, unconditional stability is yet another.

A spectrum analyzer will do exactly nothing to measure non-linearity, the degree to which the output is not a close reproduction of the input. The standard ALC circuitry is a prime example of measuring a unit's degree of non-linearity and backing off the drive until the output better resembles the input. This is, of course, totally impossible with the no-bias Class C (or Class C in general) amps because the ALC would simply back them off to zero: there is no way a class C device can EVER be truly linear or near it.

If you want to tell me that some amps are "good enough", fine. Go right ahead. Just don't tell me they are in any way the equal to an amp done right. Yes, there is such a thing as over-kill; the ability of the first 5kw FM transmitter I worked on to dissipate the entire input as heat (that's what the 5000 is in 4CX5000) is probably a bit of overkill for hobby service. Three phase power is probably stretching a point as well. It's all in the purpose for what all the engineering effort is spent to accomplish. If the purpose is the shrinkage of your customer's bankroll and his purpose is to fill the air with enough rf to be King of the Hill in Lower Pottsylvania, you will most certainly come to different conclusions than the guy building up the latest version of KDKA, a police transmitter, air traffic control gear, or anyone wanting something a bit more sophisticated than a few gross of transistors bolted to a stock heat sink.

You can bellow 'horse' at a mule til you get tired; at the end of the day, he will still be a jackass.

Dick

PDL-2 are switchable you can operate them both horizontally and vertically. They have two feeds one for horizontal and one for vertical. You can run two coaxes to it and put a switch at the radio or use a coaxial relay on the antenna and just bring one coax back to the radio. I ran one for nearly 2 years before a storm took it out and liked it very much They can be turned with a cheap TV rotor.

You all know an Antenna system is what wins a key down not the boxes, The amp is only 5% of it. You can only be as good as your antenna system will allow you to be. The real test to an amps worth is in skip land. An amp that take hours of key time with out blowing up will tell you about quality. So take your Xforce Mowatts and Davemade Boxes and key on them for hours at a time and you will find out that a NoName is the best box out there.

Well said! Even though I just bought a new Davemade, I still love my Texas Star 500. After 6 years of daily use, and getting spanked with a modulator it still kicks ass. Great amp, and sounds good too.

4027. RCA Mark 9 Tube CB ???

Newsgroup: rec.radio.cb
Date: 2000-04-28 00:00:00 UTC
From: FlyinBrianSR71@webtv.net
Message-ID: <22108-39097487-1@storefull-142.iap.bryant.webtv.net>
Source record: 33499

Hi All, I have a RCA Mark 9 CB which is in pretty good
condition....There is a Switch on the top marked - Spot On/Off does
anybody know what this does.
The radio has 2 knobs.. on the left is transmit channels
A,B,C,D,E,F,G,H,I,J
and on the Left Receive knob for Channels A,B,C,D,E,F,G,H,I,J.
and one knob with on/off volume and on the end of the same knob is
Squelch.
Also there is a meter that has a switch on it marked EO / S. What does
this mean ??? .. also has in the back a extra piece of hardware
attatched for hookup to 12v DC in a car...
Any comments on this Radio ????

4028. Re: class c amps ? b amps ?

Newsgroup: rec.radio.cb
Date: 2000-04-28 00:00:00 UTC
From: rollingradios@aol.com
Message-ID: <20000428074641.19418.00000181@ng-bg1.aol.com>
Source record: 33500

The bottom line on this subject........
There are some custom built dc amps available today that sound clean, clear, and do not destroy tv and telephones. I know it's hard to accept for some, maybe like the feeling of chewing on tin foil...but quality has gotten better.
As to classes, most custom amps are available in class C. Possibly they approach class B in how they perform, but they perform well. Available in some is class AB and B biasing intended for SSB use. In real world applications, the socalled class C's from some makers work fine on SSB, slightly grainy, but easily understandable.
Some say these amps are just simple Motorolla design slapped together as cheap as possible.....I disagree. I know for a fact alot of time was put into modifying the original design for better quality and performance. That's like saying a Kieth Black 500ci aluminum engine is no different than a factory GM 327 or 454.
Did you know there's some 800hp engines out there that are cleaner than new smog controlled engines? Some say it's not possible because it says so in books......
kinda like the old "nothing beats a 1/4 wave whip" thread, because a book says so........imagination and experimentation brought us where we are today although many wish to supress it.

that radio has a 23 channel tunable rcve....the spot switch is
so you can zero beat the rcve to the xmiter...when you turn it
on it will xmit a very weak signal that the rcve can hear. that
way you can tune the rcve to your xmiter to make sure your
listning where your xmiting...

And exactly how does a conservative act or talk, Ben? Are you saying that because I disagree with YOUR views on this one specific subject, you're going to question my entire political philosophy? That's not being a conservative, Ben. Thats being narrow-minded.

Bo,
No that is not what I am saying. Were did that come from? You
stated that desparado was selling a 55 antenna cheeper. I told
you that it was a monkey made 55 copy thats all.

The antenna that bell cb sells is a true 55 made.

As stated above in my earlyier post I believe I made it clear in
the discription of both antennas there is a differance between
the 2 antennas. I was disputing your post about desparado
selling 55 cheeper. Again I am saying Desparado sells monkey
made antennas not 55 made.

A couple years ago a friend of mine picked up one of those
for $20 at a flea market...we brought it to our regular
shop (still in business, I was there yesterday) and they
were able to mod the hell out of it...I know for a fact they
peaked it out around 12w AM/ 30W SSB, modulation wide open,
and I think they were even able to add extra channels and
mount a freq counter on top...all for $75 plus the cost of
the freq counter. I will ask my friend if he still has the
radio and what they did to it. If you'd like to discuss
getting in touch with the tech who did the work you can email
me.

I've had the personality deficiencies way before living in the desert.
Other people have complained before, also. But I just keep getting back
to the same old conclusion that I am a bitchen guy.

Sure no problem slide on over to the third trailer park as your heading
into Edward's Air Force Base, in the Mojave, give a call on 12 AM, or 38
LSB, just call fer Jay. Just over the hills north of Trona I have a
mining claim, monitor 38 lower there also. We can get Ma all liquored up
and watch her do the Hula. Then we can pull out the electrik oven, and
use the 220 socket fer the big linear and shoot skip all day, if Ma
ain't kookin nothin.

> Creating a resonant situation is not brain surgery, and does not include
> voodoo.

Its not all that easy, if you have never done it before.

> Coax length has been discussed to death and despite your
> position that length is important,

Coax length has never been completely explained here, as to all the
variables. I never said any coax length should be used as a antenna
tuning function.

the truth is that at best, a long run
> of coax is acting as a modest tuner, but still doesn't take the antenna
> to its maximum resonance and at best tricks the radio and your swr
> meter. The way to fix the problem is to adjust/modify/move the antenna.
>
Yes I agree that the antenna should be tuned to adjust for min SWR. But
not all antenna or installations are adjustable. Not all antenna
installations have a good ground plain, ect.

I wish I had more time to kick this around more.

" maybe you should look at the meail address of the poster before asking. "

what does his mailing address have to do with how he knows how worked where , and what amount of influance they had on product design .

i know his mailing address is for nonameams@aol.com

use outlookexpress and you can make your email address "president@whitehouse.gov" that don't mean your the pres .

i know some of the people he is talking about personally .

i was just wonderiing how he knows what he knows ?

if he read it from this group , and assumes its right , well then i know he is full or crap . if hes knows 123 and those other guys the his comment holds a lil more ground ..... see my point ?

Bullshit to it all, an antenna has just as much to do with DX, the only thing that keeps an amp from getting hot is to use more heatsink and fans. Also keep in mind that if the watts are not real then the amp will not draw as much current as an amp that is right, this in turn leads to less heat which makes them stay together longer in DX. This also is the reason some of the shit amps out there will take higher volts, because if you are not producing the watts then you are not drawing as much current, current is what is so deadly to a transistor, that is why they blow when you have reflect, because reflected power will make the current across the pills increase. You can tell me I am wrong all you want, but if you cannot back it up with a better piece of test equipment than a bird 43 then don't even bother, if you feel you must tell me differently, please explain in great detail. Also keep in mind that I do not run any of the amps you mentioned in your posts nor am I downing any of them including NoName. I am only letting you know what you apparently didn't already.

If the antenna that bells cb sells is a 'TRUE' 55 made..... Then where is the serial #, and please explain the brass lug....
Don't get me wrong, I think this antenna works very well on a mobile setup, IF you are not driving around.....try hitting a tree at 25 mph, and watch it snap in half.......

Put it together, hook up a radio and a meter to it. Check SWR and
see if people hear you. An ohmmeter will only show continuity or
an open at DC. The AC characteristics can only be tested as a unit.

I have a mint condition Yaesu FRG-8800 shortwave receiver that cost me $700.00 dollars back in 1984, its coverage is from .150KHz - 30MHz in the following modes of operation....AM NFM WFM USB LSB CW, its fully computer controllable of all its functions plus it allows for un-limited memory channels, this particular model also can scan any combination of frequencies programmed into its memory or via your home p.c. The trade im looking for is an un-modified "mint" condition DAK Mark 10 am/ssb c.b. base radio, it would be an even up trade except for the shipping costs of course, if anyone is interested...please contact me direct by e-mail, and thanks for reading this post, a good day to you all.......Frank.

Source record: 33533

if there is no ser# then it is not a 55 made. If it has brass
hardware it is not a 55 made. The discription of the 55 on
bellcb web page telling the customer about the 55 made antenna
is accurate. But if you bought it from them and it has no ser#
than it is not a 55 made end of story.
Bean

I use an I-Max 2000 and you coulndn't give me 100 antron 99's for my I-Max 2000! (Well you could but I would sell them all and buy another 2000!) It bew all of the A-99's i've ever had right out of the water and the nice thing is you don't need a ground plane kit on it! I love my antenna and have had zero problems with it.

You can get side post extension terminals from most auto parts stores. They are the same as the old post but they have threads and a nut on the other side. I have them for my batt. If you are unsure about what I am talking about, goto your local auto parts store and tell them you have a side post battery and you need to be able to hook up accessories to the battery. they will know what your talking about. They run about $10.00

4074. Re: wierd, changed mount SWR shot up.. Pt 2 cont..

Newsgroup: rec.radio.cb
Date: 2000-04-28 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <390a0357.506804@news.iserv.net>
Source record: 33546

Greetings!

Hold it...Hold it...

You said the the previous post, that you bought a Firestik II Dual 4' antenna kit...

Thats the answer!

A Co-phased antenna is tuned differently than a single one. Both antennas need to be used, so your situation is suggesting a single one and would explain why the base loaded antenna - which is for single mounts, offers a good SWR.

Get rid of that Dual antenna kit, return it!

I recommend returning the Firestik dual kit, and settle for a single one - the whips you're using aren't matched for single antennas.

Firestik II tunable tip 5 footer should get you back on the air, or even a regular single CB whip of your choice to fit the 3/8-24" thread mount should do the trick.

Make sure the Coax is RG-58 or RG-8 series for this to work.

On Fri, 28 Apr 2000 00:36:03 -0500, while the modem was pondering it's navel, "A. H." <a0h9065@labs.tamu.edu> dissertated the following:

>Sorry.. I didn't finish the whole story
>so today I got a Valor mirror mount, cause it has 4 botls and thought
>that it would keep the antenna stronger, which it does. But even with
>the mount being in the same location, with everything else exactly the
>same it has a higher SWR than the Firestik mount. I mean I even used the
>firestik stud.
>Anyway.. I wanted the antenna on the roof cause I heard that that's the
>best place for it.
>
>I will try to get some pictures up on a webpage next week, so you can do
>a visual on the setup and see what sticks out.
>Thanks..

ok if 2 people are running similiar antenna systems which amp would you want to use
the one that does less watts aka (Noname) or one that does more watts aka (xforce) You figure it out
Please tell me what is so special about a noname amp that makes it any better than the others.
when it comes to talking skip. you use small bead transformers you dont think they get hotter than the big ferrite
you use the dominator design they arent as effiecent as the amps you are bad mouthing
what makes your heatsink any better?

4079. New ball mount with old coax question.

Newsgroup: rec.radio.cb
Date: 2000-04-29 00:00:00 UTC
From: Mike Wilson <mijawi@home.com>
Message-ID: <1mqO4.16370$nB3.1707565@news1.rdc2.on.home.com>
Source record: 33379

I just purchased a new ball mount for the side of my Jeep. I'm currently running a 5' Wilson fiberglass antenna with the basic screw on type male/female connectors (don't know what they are called). My problem is that the ball mount doesn't have a connector for the coax cable. It just has a 1/2" threaded rod with a screw in the center for a wire. Do I need a new cable for the ball mount? is there an adapter for the ball mount? Any help would be appreciated.

Mike W.

4080. Cobra 148F GTL DX+ ..Trade for Pro 2004, 5, or 6

Apparently a group of ex-"14.313'ers" who moved to 14.275
versus a group on 14.273 who like to run
high power and dirty amplifiers, (they claim that
they have been on 14.273 since Marconi discovered
radio....)

Appears to be your classic ham radio "turf-war" squabble
warming up to a slow then full-rolling boil. Dump in a pound
of spaghetti and make dinner....

Listen in on 14.273-275 USB during daylite USA hours.

Serious? There's 10 or 15 different varieties of the same amp around. I can always tell when someone is running one of those things just by the way they sound on AM. It sounds like crossover distortion. You drive the piss out of it to get any understandable AM out of it. If you push a class C amp hard enough, you can bias it to almost class B with drive.

If you work an amp like that, with any kind of voltage boost, you can nuke your pills quick. A class AB amp at 14V will last forever if your SWR stays good.

It's a noisy band, you'll do what you have to do to be heard.

Greetings!

Er, no...

You need to strip the coax down, exposing both braid and center, trim off about 2-3" so you can put ring lugs, one on the center, and one on the braid.

The two need to make the connection, but the shield is for ground, and thats for one of those side bolts holding the mount to the jeep. The center lead, has the ring lug that bolts to the center.

At last check, and you might want to measure the diameter of the bolts on it too to make sure you use the right size...

You'll need a 3/8 ring lug for the center to connect to the stud of the antenna side of the ball-mount. It's the large stud bolt in the center.

However, some stud bolt ball mounts I've come across, have a 1/2 bolt on it instead and you have to use a special washer.

Thats why I recommend measuring the diameter of those individual bolts, and get two ring lugs. One to fit the big bolt, and the smaller to fit the outer smaller ones.

You need a smaller ring lug to bolt up to the smaller bolts holding the mount in place - that is where the shield side goes, to one of these smaller bolts thru the smaller ring lug.

Solder the shield braid to the smaller lug and the center wire to the larger lug.

Got a multitester? Check to make sure the the shield braid conducts to ground. And that the center only conducts to the ball where the whip goes. No shorts across Shield to center!

On Sat, 29 Apr 2000 11:35:20 GMT, while the modem was pondering it's navel, "Mike Wilson" <mijawi@home.com> dissertated the following:

Source record: 33559

Extremely clean TRC449 mobile, front plate super, never modified but will easily take freq. mods, same rig as the 138 and in a lot of folks opinion a better rig than a 148. shows a couple of mounting bracket marks but that's it, as close to a new 858 as you will find.

$100 plus shipping or will take swaps, scanners, amps, etc.

email replies please

>* is there any info on the web about it (apart from your review)
>* is it directional?
>

Hey Matt-
It is a vertical, omnidirectional antenna. I did set up a rotor for it just to see if there was ANY kind of directionality but indeed there is none.
BUT, it does need to be mounted in an upright, vertical position... angling it back on it's gimble to an almost horizontal position yeilded a monir difference in RX but immediately killed TX.
As far as reviews elsewhere on the 'Net, I was never able to find any, and I searched around for a good while. One of the reasons I bought it was simply to get SOME kind of info about it, and if I'd really hated it I'd send it back, right? :-)
Even the website for President only gives the specs, that's all. You can get the same info from the Thomas Distributing homepage...
<http://thomas-distributing.com/products.htm>
...but it's still not a review.
Who knows why, it seems like it could be such a boon to apartment CBers, etc.
Linus

>

I bought mine from Thomas Distributing:
<http//thomas-distributing.com/products.htm>
Look under base antennas, then President. It'll be about $75 shipped, if you go regular UPS ground.
You may also want to purchase a right-angle PL259 adaptor. Attaching this to the antenna, then your coax to this, will greatly reduce the strain on your coax. I don't know why they didn't set it up this way in the first place, if it needed to be vertically polarized... :-)

Source record: 33564
Body handling: Binary attachment payload not displayed: dbertone.vcf

This one easily puts out 1800 watts but would do a lot more with fresh
tubes. Not that these are bad but
as time goes on, so do they. I've had Alphas in real bad shape still
put out 1000 watts and these were
the 2 tube models. This one uses 3 8874's and is just back from Alpha
(www.alpha-power-inc.com)
and was completly gone through.

It had the 10 meter mod done and the power supply was gone through along
with the QSK board and the
bandswitch. Everything was aligned including all the varicaps for each
band to make sure they were in
peak tune. These are the ones that let you simply switch to a band and
not have to tune it up. Each band
position has a manual tune and no tune position. You get more power out
when you manually tune it but
only about 5-10 % more. Now that it is tuned it may not matter. Covers
160-10 meters. Wake up your
neighbors on CB as it even goes there!

[One or more binary attachments are retained only in the source text.]

> although many wish to supress it.

By and large you have it right. Re the engines, there is no doubt you have it right for no better reason than an engine efficient at burning fuel for power is also very likely to be efficient at lowering pollution. This is a bit different than the days when excess fuel was intended to cool the exhaust valve and cubic inches was the answer to any problem you had.

Remember the first rule of Engineering: A brick can be made to fly with the application of enough time and money. Good physics and a good bottom line generally produce good results for specific purposes. If you are willing to spend the money and perhaps make some compromises (like 'grainy' SSB) lots of neat things can be done. There are a lot of better beers than Budweiser but you have to hand it to them for making a consistent quality beer in godawful quantities. When the achievement of a goal can get you paid, laid,

or fed a lot of paths open to the impossible.

My only point thru all of this is that you can adapt, modify, fiddle and have lots of fun but you do not repeal the underlying physics: Class C is not linear. It may well be 'good enough' particularly where you don't get greedy about it but it is not and never will be linear. To assert that enough designers with pure hearts are going to change this situation is simply flatulent. Having some sort of 'debate' where pure assertion has to be met with three days of heavy-duty spectrum analysis is navel-gazing.

The reference to antennas is apt because there is probably no other area which lends itself to making the laws of physics work for specific purposes. The object of the game is to put a probe into a giant waveguide called the Universe with as little loss as possible consistent with the size of the customer's bankroll. To do this with any success, the first thing you had better get used to is that the input impedance of the Universe is 377 ohms and all the designing and skull-sweat in creation won't change it. At some point you also learn that execution is far more important than design: mobile antennas work all kinds better when the engine, frame, and body parts are electrically connected -- floating trunk lids make really crappy ground planes.

We won't even get into the 'nut behind the wheel'. A lot of engineering goes into idiot-proofing but Mother Nature insists on evolving ever-bigger idiots.

I question the line about 'supression'. Who is suppressing whom and for what? That better devices are available today is unquestioned but the underlying physics and technology are largely ancient history.

Dick

Source record: 33570

Hey guys-
I use a really nice Cobra 2000 quite often, and only recently I finally got inside and cleaned things up, realigned it, etc, so it's running very smoothly now. I was wondering, what was the original stock mic that came with the 2000, or WAS there one? It would be nice to have a "complete" 2000 set-up, since I have the radio and the speaker already.
OR, if someone HAS the model of mic that came with it and would like to sell/swap/whatever, please let me know!
Thanks!
Linus

Source record: 33575

CH 1 is 26.965. CH 40 is 27.405. Going below 1 and above 40 is
considered freebanding. If you do not have a ham ticket, DO NOT
go above 27.995. There are gov't and business frequencies scattered
about. Try to avoid them. Someone has a page with those freq's
listed.

Be careful... overall DC wattage into an amp says little about the output wattage. That will depend on the overall design and efficiency! To answer this question... you must measure the output wattage into a suitable dummy load. Now you will also know the overall efficiency...

I have a new prototype amp in testing right now. It was designed to the following criteria:

Class C - Suitable for AM or FM
100W average output with 4W drive
Minimum drive requirement of 0.5W
Second harmonic down a minimum of -35dB (proto at -38dB)
24-30MHz operation
Minimum efficiency of 70% (proto at 78%)
Carrier operated relay for transmit / receive switching
Current draw maximum of 10A at 14.2VDC allowing for powering from automotive cigarette lighter (proto at 9A)
Safety fused at 15A
On / Standby switch
SO239 interface connectors
Zero power drain on standby
Minimum gain of 12dB (proto at 13dB)
Input VSWR below 1.3:1 (proto at 1.1:1)
Stable operation into 15:1(all phase angles) mismatch conditions
Heatsink maximum teperature 55C(131F) with 50% duty cycle (30 seconds on / 30 seconds off)
High reliability G10 PCB with all aluminum robust black anodized housing and heatsink.

So far the proto is working as planned. I am building up several more units and will put them into operation shortly.

Freebanding means talking on freqs you are not supposed to be on so I guess anything other than CB channels 1-40 would suit your sick need.

WELL GUYS I HAVE TO THROUGH MY TWO CENT'S IN ON THIS ONE
as far as life time goes only a fool would do something like that .its
just a sales gimmic in the first place i have a shop up around me
doing just that , but everyone that goes in for a repair the tech
tells the customer its not his falt the truck he is driving is to ruff
and causing cold solder joints.or the part that went bad is not the
part he replaced. and it goes on and on.my point is if you are going
to give a life time warranty to a customer , you should do just that .
what ever happens to his radio you should repair it and thats it.
don't try to beat around the bush and make an ascuse just repair it
that good business. you win some and you lose some. but for me and my
shop if a customer has a problem with equipment he has bought from me
i would rather have a happy customer then one pissed off customer.
just remember this guy's , if you make a customer happy he is only
going to tell a few people. but make one customer unhappy he will tell
100 other people . so to me i would rather have a bunch of happy
customers then one unhappy customer, you all get my point!!!!!!!!!!
have a good one and think about this real hard.
im up here in the motor city and i hear all kinds of war story's about
shops accross this whole country.

Today I picked up a really cheap 2510. No manual, of course.
When I turn it on the freq blinks at 128.000.0 but it won,t
change freqs. If I push the PTT button on the mike nothing
happens, but if I push the TX button on the face the meter
streaks across as if it is Xmitting. Do I need to reset
anything? Help appreciated.

Hi..
Take out the mic...
Then see if you can change frequencies..
It could be faulty mic wiring that is messing it up...
If that still doesnt solve it, it could mean a bad cpu..
If you are ever interested in selling it...Let me know..

Never could figure why they call it freeband as nothing is free and the
fines for transmitting on unauthorized frequencies is anything but
small.

4152. connex board in 29 wx nw st?

Newsgroup: rec.radio.cb
Date: 2000-04-29 00:00:00 UTC
From: Jim Justus <JJUSTUS@KC.RR.COM>
Message-ID: <0bJO4.1092$5i3.16045@typhoon.kc.rr.com>
Source record: 33602

Hi folks. I've got a Cobra 29 WX NW ST {pheeew}that I recently tried to install a Connex echo board in. NO luck. I'm not a stranger to the inside of a CB, having installed some channel kits , and polarity diodes in various models, but I'm no technician either. This looked like a simple enough install. I tried getting power from several points. Still no luck. Always no audio. Does this model not work with the Connex? Is it something to do with Sound Tracker?
Thanks for any and all replies.
Jim

4154. Muffled Audio in Cobra HH45WX handheld CB

Newsgroup: rec.radio.cb
Date: 2000-04-29 00:00:00 UTC
From: CDT <xctx@onr.com>
Message-ID: <01bfb228$f29bdc80$340cc8cf@default>
Source record: 33604
Cross-posted to: rec.radio.cb,sci.electronics.repair

I purchased two used Cobra HH45WX handheld CB
talkies and noticed that one of them has muffled audio.

The modulation level seems OK but the frequency response
appears limited to 1KHz or so...hence the muffled sound.

I've inspected the internal condenser mic and it appears
mechanically intact.

any suggestions?

-thanx in advance,

-c.d.t.

Is this a true class "C" amp? Not one that meets the definition of
class C by having to overcome the bias turn on? Thats nothing more
than a class B with cross over distortion. To achieve the true
efficiency of a true class C amp. it would be useless for AM.

Class C is defined as a conduction angle of less than 180 degrees. My amp has zero bias and therefor qualifies as class C. As for crossover distortion... you are correct but this amp has none. You see... it's a single ended design with only one 2SC2879. As for being useless on AM... you are dead wrong. Class C is perfect for AM and FM where the carrier is not supressed. As for SSB(supressed carrier)... well, that's another story.

Thanks. I tried what you suggested. It still just blinks.
It does receive as I heard what sounded like a repeater ID in CW.
Any other suggestions? I forgot to mention it does have a switch
in the back for high power/low power. I'm not sure which mod
that is. Can I get a replacement chip at Copper's or some place
like that?

Thanks

4164. Which Uniden is the M.W. 719 a clone of?

Newsgroup: rec.radio.cb

From: Redwire <graydogsNOgrSPAM@yahoo.com.invalid>
Message-ID: <01d8de90.e2d2867a@usw-ex0103-086.remarq.com>
Source record: 33614

(Forgive the dangling participle in the Topic.) I dragged down an old Montgomery Ward's 719 SSB CB from my closet tonight for my son to use. I forget which Uniden this radio is actually a clone of. (Damned...there's that dangling participle again!) I thought I remembered this being discussed about a month ago in this group, but when I ran a search I couldn't find the posts. It has a Uniden board in it (I just took the cover off to shoot some tuner cleaner on the Vol. control since it has been stored for a couple of years and can verify that.) Is it the same as an old Grant with the controls placed in different postitions?

it will work in there just fine....you must have the audio input
and output reversed or the board is bad....use an 8 volt sorce.
even it it says it will work on 12 volts it will work better on 8

Well, if you have a less than well designed amp, or load, then you
could expect anything. However since most people strive to get a
good match before they even attempting to run an amp, and since this
is a fairly popular amp, then I would think that you could expect to
get an expected result.

Expect more than 50% efficientcy.

I would say very little more than 50%! The fact is most amps out there are running in the area of 45-55% efficiency... not very good. That's why they get so damn hot!

Barry,
The other replies pretty well have your problem covered.
What you might try is when the 'AWI' light comes on, try
checking continuity of the coax. See if there is a short.
For a run of 45 feet or so, resistance should be VERY low.
Then check it when the 'AWI' light is out. What kind of
difference in resistance? Can't remember if the Antron
shows a 'short' or not, thats why the comparison. If there
is a difference in resistance, then the PL-259's should be
re-done.
'Doc

I have a upper side band and a lower side band, is that the same as a single sideband radio? I learned on one web site that I have a nice PLL, as in it can be modified easily. I can change my crystals or re program my PLL. what is a PLL? I know it would be cool to be heard in the next state, but what are the risks? Is that what modifications are about?

thanks for the response, I have passed on your review to the editor of one our radio mags as well as the urls (don't reckon he would have believed me otherwise) and hopefully they will be able to do a review and publicise this great looking antenna. I am seriously considering buying one myself, the only problem is that by the time it arrives here in Aust it would probably cost me in excess of $200 Aust.

Cheers

Matt

Hi,

I have an interesting problem. First I will outline the equipment:

Uniden Madison Base
A99 Antenna on 30' pole
45' feet of coax cable (RG8X)

I noticed last night the SWR was very high 3:0 !! and the AWI light comes on. So I am thinking damn the radio or antenna is screwed.
The next morning I try it and the SWR is nornmal and the AWI light is off.
Now I am confused. So I figure oh well.

Tonight same thing!! High SWR and AWI light is coming on

The AWI light does not come on when transmitting on USB or LSB don't know if this means anything.

Anyone got any ideas?

Barry

Whatever is wrong will be simple to fix but will take 8 hours to locate.
Don't know where you live, but moisture at night might be an issue here.
Check all connections for tightness, corrosion, water seal, and check
for continuity-it might be shorting somewhere. Also, temperature during
the day might permit some connector to expand a bit and make a better
connection. At night, it cools and contracts. Check all of the fittings.

Do you honestly think anyone is keying down stock amps?...Even a Dave amp
can be upgraded

I hope I did`nt brain my damage.

>all
>don't add NoName into the debate

First off if you call Dave amps junk then you are calling No name junk since they are a rip-off of Daves old design..Secondly maybe its because if you get outside No-Names little Washington DC area no ones ever heard of them..And thirdly (If thats even a word) they don`t win any keys outside the little local breaks right in their own back yard

I hope I did`nt brain my damage.

Hey Matt-
I think the $200 thing is likely dead-on. In that case it may not exactly be the most economical alternative. BUT, if other restrictions are in place, money may be the difference between getting out 'okay' or not getting out at all.
I think that's very neat that you're sending my little review to your magazines, let me know how things turn out.

Heck , Ive worked Papal New Guinea on 5 watts on a big stick from GA. If you can do that on CB you can work anywhere given the right conditions. The missonary I talked to says it is not too unusal to hear mobiles in North America.

Mitch,
An AM signal is made up of an 'Upper side band', a carrier, and a 'Lower side band'. With SSB (single side band) the opposite side band and the carrier are removed from the AM signal. Upper and lower side band signals are both 'SSB' signals.
A 'PLL' is a 'phase locked loop' circuit. It takes the place of a crystal. Unless you know what your doing, and have adequate equipment, don't mess with it!
I don't know of any risks in the 'normal' talking be-ween states and in some circumstances, countries. Just don't buy any 'wooden nickels', bridges, etc.
'Doc

Well sorta... but this PLL circuit also uses a crystal for operation.

The PLL can be defined as a multiple component(not just one IC chip) circuit that is used in a CB as a frequency synthesizer. Sometimes... incorrectly... the "programmable divider" chip is referred to as the PLL chip.

If you do need a replacement, I would recommend getting the chipswitch as the last guy stated...
That costs a little more ($49.95) than the original chip, but gives you tons of additional features..
I does sound to me like yours is bad, but I could be wrong...

hi.. you could swap the mic element from one unit to the other. This would indicate if the element itself is faulty/defective. If the mic's small opening has been exposed to contact with a liquid, it's probably defective.

There might be a manufacturer's number on the element, but it's not likely.. you can find suppliers that might have a common type that will work well, or contact a Cobra dealer.
One from a cheap phone or something else with a 2-wire hookup might work as a replacement.

cheers

For the sake of saving time and possibly needless troubleshooting... I suggest the replacement of the condenser mic element. This can be done in several minutes at minimum expense...

not having SSB is not a problem. its not susposed to have SSB...
its a good loud radio on AM same rig as the old cobra 25...very
good for truckers. They don't need SSB because most all of them
are on AM and with SSB everyone has to be tuned in to have good
recieption so your constantly fidling with the knobs and not
watching the road.....here in the Ozarks ya better keep yer eyes
on the road or you'll be at the bottem of a bluff wondering what
happened....

Your amp qualifies as a class C by strictest of definition. "Real"
class C amps usually have a conduction angle of between 125 to 150
degrees. Too bad you have to use your .7 volts turn on as a way to
make your amp sound like its a "real" class C. Also a "real" class C
amp is worthless for AM and SSB.

oh i agree wholeheartedly , bean. but the reality of the situation is this. most of us don't go to keydowns and that is the point that is missed a lot of times on this ng. when you take that into consideration, then there is only one way to go on the street, and that is dc. it is simple. you just flick a switch. no tuning, no dangerous high voltages, etc, etc, etc. oh i definitely agree that a dc amp will never do the watts that those big tubes you speak of will do, but if it was possible to run a ac amp on the street and do it simply with a minimum of problems then i would be the first in line to get one. but until that time comes, i will stick with my dc stuff. and of course we all know that there are many times you cannot key up anything especially when you are around people's houses, cars , etc, etc, etc, known affectionately as no key down zones, but i wouldn't mind looking into it if the technical difficulties could be worked out , because i am just that kind of guy,...cd is out.....

I was reading some of the information on keydown competitions with great interest; one thing that everyone seems to be blissfully unaware is the possible health and safety implications when generating such awesome amounts of power. I think one of the articles refers to 70000 watts that caused camcorders to eject and the air to turn hazy

I was just curious if anyone could state how safe or otherwise is it to be exposed to this sort of RF power for any length of time?

Cheers Mickey

"Real" class C???? Come on... there's not class C and "real" class C!
I think you are talking about a deeper class C amp that would require
several volts to turn on. So what's the big deal? Also your last statement
is nonsense... if you have an adequate drive for a deeper class C amp... it
would work like a million bucks on AM and FM! Don't know where you got that
information.

4237. Re: Weird SWR Problem

Newsgroup: rec.radio.cb
Date: 2000-04-30 00:00:00 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <390C1737.24FC1BCA@qnet.com>
Source record: 33687

Hello Barry: Gary's reply posting was a good one. Its possible you have a intermittent connection in the coax line.

While looking at the SWR, have someone shack the mast of the antenna, and see if shacking will change the A99 SWR. If you see a change in SWR, I'd say ya got a coax or antenna intermittent connection.

I have seen many coax PL-259 connectors not soldered correctly. Seems everyone solders the center wire into the center pin ok, but the shield solder connection is another story.

The PL-259 connectors are not all that easy to solder the shield, so a lot of guys just don't solder it, or don't know it should be soldered. A bad or intermittent shield connection will cause what you have explained.

Another problem is that the brass PL-259 connectors are mostly Nickel plated, making the soldering even more difficult. I scrape away the Nickel plating with a small file, so that the brass is exposed or you can see that the Nickel plating is removed. I use a drill & drill bit to open the 4 each shield solder holes in the PL-259 by just a very small amount. I put the PL-259 in little drill press vice with wood surfaces to hold the PL-259 and drill out the 4 holes, 2 at a time, this removes the Nickel plating from inside the PL-259 shield solder holes. I use a wire brush to clean and make shinny the PL-259 shield hole area. Using a air nozzle, I blow out any metal shavings or dust inside the connector.

Silver plated PL-259 connectors with the Teflon dielectric can be bought at Radio Shack for around $4 dollars each. (I have always through that $4 dollars each is highway robbery, but they work well) But these silver plated PL-259 connectors solder very well, without all the Hoo-Raw filing and drilling.

Then I assemble the PL-259 connector and solder the center first, then the shield connection. I use a good rosin core solder, and while soldering I have the PL-259 connector in a small vice.

The center pin can be soldered by just about any type soldering iron or gun. But the shield solder connection will take at lease a 50 to 60 watt iron to make a good connection. I prefer to use a 100 watt iron, I get on the PL-259 connector with the iron, allow the solder to flow, and get off the connector in a short period of time.

One of the radio guys up in the Seria Mountains, bought a few extra PL-259 connectors and just practiced soldering them a couple of times.

When installing the coax, I tighten the PL-259 with a small pair of pliers and the wrap the connector with black tape, and then apply a Silicon RTV Rubber, from a tube, this seals the connection from all the weather.

Check to see if the A99 has the two connections where the antenna screw together are tight.

If you verify the coax is in good shape, then possible the A99 has intermittent connection inside the antenna. The A99 has a impedance matching set of coils, located just inside the lower base of the antenna.
While measuring continuity with a VOM Meter, you should be able to see what looks like a dead short. If the very low resistance of less than 1 ohm is intermittent or missing, you have identified the antenna as being bad.

At a Ham Radio Stores, they sell the ARRL Antenna Book, they show in detail the soldering steps of the PL-259 connectors, and a hole bunch of other neat antenna stuff.

Hope this helps, a little.

Rockin & ah Rollin in the Great Mojave Desert, just down the road ah ways from the fillin station.....

Prof, zero-bias has exactly nothing to do with being class C. You are merely taking advantage of the fact that a bi-polar transistor is naturally biased beyond current cut-off by the need for forward drive or bias to conduct at all. Zero-bias triodes made for grounded-grid linear service run Class B. It is that it is beyond cut-off with no drive that makes it Class C.

The term 'cross-over distortion' is probably better used to describe push-pull operation but the cause of it is that most devices are sloppy and non-linear right when they start to conduct. Being single-ended does not change that fact. You might want to look for parasitics at that point because they are common with high-gain devices at operating extremes. A good parasitic will toast your transistor.

As far as using Class C on AM you are simply out of your mind. It might work passably but not linearly. There will be distortion, depend on it. It has zilch to do with carrier suppression and everything to do with linearity (or fidelity if you will). No Class C device is linear, period.

The whole problem here is what makes an amp Class C. We need a new word for transistor amps that are really fiddled Class B and that is, in fact, what you have Prof. Not a technical breakthru in sight.
You have chosen to make some compromises in the interest of avoiding proper bias circuitry; live with them and prosper.

Jay/Mohave,

There's a way I use to solder connectors (P1259s) that alleviates lots of connector probs. Actually, I don't solder the braid at all. Whups! Don't go wild just yet! LOL! First, prepare the end of the coax as usual. Instead of cutting the braid to fold it back over the adapter, use a nail, etc. to unravel the braid. Then fold it back evenly back over the outer cover. If using RG8X or other smaller coax that requires the adaptor, screw or push the adaptor OVER the braid until the braid is just visible under the adaptor at the terminal end, allowing enough length for the center conductor to reach and thru and beyond the center pin of the barrel. Screw the barrel onto the adaptor and solder the center pin only. A VERY snug/tight fit will result (some trimming of the outer coax cover may be necessary to allow the adaptor to fit over the braid). Trim off the excess braid behind the adaptor.

1. As said, it gives a tight fit.
2. Often when a connector is assembled in the conventional way, one or two of those little braid wires will work loose and contact the center pin causing a short.

3. By forcing all the braid wires UNDER the adaptor and BACK away from the "business" end of the connector, it isolates the braid and prevents contact where it is not wanted.

4. Every try to get a connector off after it has been soldered thru those little holes? Many times, it is impossible. So by using this unconventional method, the connectors can be used again and again. I have had to cut off many a good PL connector and discard it because I could not get it apart.

5. It is much quicker, and if you are making up several sets of jumpers or feedlines, it cuts the time of assembly in half.

In case of large coax where the adaptor is not used, the braid is un-raveled, folded back over the outer cover, and the body of the connector is forced on over the braid. Again, this isolates the braid from the center pin and prevents shorts, as well as having the advantages above. TRY it, you might like it! BTW, to further prevent braid from contact-ing the center conductor, leave a little of the dialectric cover on the center wire(s) which has the efect of "moving" the braid farther back from the business end.

I'll probably get insults and other reasons not to do this, but it DOES work. Been doing it for 35 years!! Again, just try it and see if it works JUST as well and saves bunches of time!

73

Jerry

It's not safe, but there is no way to explain it to these mental giants
in a meaningful manner.

Thanks Professor, thats what I figured. Over here in the UK a
few years ago there was a huge row with the electric companys
over the use of the overhead power lines near folks homes. I
think there still may be litigation ongoing over whether they
cause cancer or leaukemia. Anyhow the row has dragged on for
years and probably will continue to do so. Keeps the lawyers
happy I suppose.

Cheers Mickey

Adequate drive? How does that make it deeper class C? Its the bias
that determines the Class of the amp not the amount of drive. Your
out of your mind if you think that a class C amp that conducts during
120 degrees would work for AM. Unless you apply high level modulation
to it. True class C amps are not llinear. You have nothing more
than a class B amp, that you chose to call a class C amp by virtue of
the turn on voltage of the transistor. Get off the bandwagon that
dupes CB'ers into thinking they are getting something their not.

First I would like to say I appreciate you not becoming hostile... that said... Don't think where the modulation is injected... (high or low level) has any bearing on the class of operation of an amplifer. Whether you modulate the base or collector (grid or plate) doesn't have anything to do with the class the amp is running in. I'm glad you understand that a class C amp... although the signal on the output of the device is distorted in nature can be cleaned up by the use of a high Q resonant circuit. That is what I have done in my amp. You wouldn't be able to tell the input signal from the output signal except for size of course. My oscope shows that dramatically. You would be correct in saying that class C amps are unacceptable for audio reproduction... but remember that the audio in this application is superimposed on a high frequency carrier and that changes everything. I know for a fact that some high power (50KW) AM radio station final amplifiers are running class C. They are doing it for efficiency reasons. When you are putting out that much power... you want to keep the power dissipated in the amp to the bare minimum! Class C is a good way to accomplish that...

> With all due respect Prof, no AM transmitter I ever worked on was Class C

No, actually there are some things that are free. But the answer to the origional question is: Freeband is the band or bands that haven't been eaten up by the 6th plank commie pinkos! This is how the history goes: God made the frequencies for OUR good pursuant to Romans 13. Then comes Karl Marx and says that the governments should "control" the frequencies. He made ther "slave" bands. The biggest slave band going today that is sure to enslave you is the 52-890 mc "toilet" band. On these frequencies you will find the worst filth & trash imaginable, that wouldn't of been there 20 years ago. Now since this filth is put out by the commies permission (licenced), then it is "legal." But if an individual were to do the same thing in a "freeband" instead, then he would go to jail for filth & moral delinquency, and the biggest sin of not asking permission of the Karl marx govt. agency over the freqs. that they permit this trash on! You see, the commies have been in hollywood since the beginning, and the commie agency never BUSTS them for putting out the filth on the 52-890 TV band! So the wickedness they transmit must be controlled for THE desired effect (destruction of the Republic). Aren't ALL the TV stations in violation of their licences, for violating the public trust, for transmitting all that immoral degeneracy? And the Hambos blame the CB'ers for what they've learned from the TV! Boy are they dumb! Maybe they ought to go after the TV stations licences, instead of the few skip talking out of CB banders! That would hit the SOURCE of the problem!
Dave!!!!!!

xx
Never could figure why they call it freeband as nothing is free and the fines for transmitting on unauthorized frequencies is anything but small.

Jay,

When doing connectors for outside, I use coax seal liberally. I do agree
that it is sometimes best to do the soldering in some applications.
Yet, most of the stuff is often inside and not subject to weather. I
am lazy, so I hate messin' with connectors-especially those that refuse
to come undone. Most of them will unsolder, but I have had some I had
to cut off and discard cause I couldn't get it off.

Here in Canada Large commercial transmitters has a barbed wire topped 6 fence running with in a radius of about 200 to 500 yards from the antenna. On the fence are signs every 20 feet stating a warning of high voltage and elector magnetic fields which are a high risk to health.

70,000 watts is approaching high voltage transmission lines which have high magnetic fields. These power lines had been proven to cause health problems where homes are under or very meat the transmission lines.

Cheers,
John

Yep... I have done it this way for years. In foam coax you
can't help but to melt the foam so it becomes hard. Now you
have just changed the inductive and capacitive reactance of
the coax at that point.
Cheers,
John

SWR does not change with power. It is more than likely a function of your meter. Substitute the SWR meter with another one and see what you get. BTW 1.8:1 is not so bad. Over 90% of your output (forward power) is still being radiated by the antenna.

Even if it was really 1.8:1 and you lowered it somehow to 1:1 no one and I mean no one would be able to tell the difference. These people who can't sleep at night because their station has a 1.8:1 SWR need a course in transmission line theory. I mean no personal offense at you directly sir but frankly I doubt you have any real problem at all.

> the swr meter)

I wouldn't worry about it. What you're seeing is
an increase in harmonic and parasitic output caused
by slight overdrive, too much bias, and/or the use
of a mag-mount.

You can spend the time to make everything perfect,
but you won't realize an increase in day-to-day
performance. Guys that compete spend alot of time
fussing over output SWR because the reliability
of the amplifier under extreme conditions hinges
upon it. In daily-use applications a 2:1 SWR is
not a big deal.

> accomplish that...

Again, the modulation was applied TO the Class C final, not before. As far as hostility goes, if it don't get me paid, laid, or fed I generally do not get too wired about it although I do have a real problem handling 'stupid' which you are not: ignorance is curable but stupidity lasts a lifetime. I would venture to say that a ALL AM and FM finals are in Real Class C. But amplitude modulating a Class C final is a totally different turkey from asking it to amplify an existing AM signal.

You seem to persist with the notion that all the benefits of Class C come instantly when the current is drawn on less than half a cycle. As I noted on another thread, back in the days (mid 50's) when the 807 was available military surplus virtually for the asking some people -- just for giggles mostly -- would bias them well beyond double cut-off, drive the pants off of them, and run many times the 60 watts or so they were rated for. A pair might have 40 watts of plate dissipation between them so you had to be 90 percent efficient at 400 watts to keep them from melting into the base. Current was drawn on maybe 45 degrees to do this bit of wonderment so the tank circuits were rather amazing to say the least. So far as I know the record was near 800 watts input. I don't know how familiar you are with tubes but the 807 can be described as a 6L6 with a top cap.

The point is that the efficiency of Class C comes not because the letter C has magic properties but because of the reduced time of current draw. The

design you are proposing will draw close to 180 degrees and will therefore be more of a poor execution of Class B than Real Class C and will have the efficiency to match. It may or may not give you acceptable distortion levels but distortion there will be.

Go ahead, have fun, go nuts, but report back on the outcome.

Dick

J-Bird,
Why not use a mag-mount on the cab, and if/when you
put a 'shell' on the truck, put the mag-mount on it. If
the 'shell' is fibre-glass, keep it on the cab.
You really don't wanna CB/Broadcast antenna.
'Doc

Prove that he stole someones design? That is a bold accusation from someone affiliated
with xforce/xerox amps dave did not go to work for someone and leave with there design
and list of suppliers because we all know that how xforce got started From all the items i
see dave offering they are of his design he is an engineer not a person who copys designs.
like xforce who sells daves ball mounts, voltage regulators ,amps If you can find another cb
amp that used the combining /porting techniques of daves that were out before 123 pulled
his stunt prove it. Don't try to detract from the mans knowledge by labeling him what your group is....

4283. Re: BIGRADIOS IS BACK!!!

Newsgroup: rec.radio.cb
Date: 2000-04-30 00:00:00 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <390C7010.9E9B153C@qnet.com>
Source record: 33758

Hello Toll Free: Good deal seems a lot of guys wanted it up. Even saw one of the re.radio.mics whiners and complainers ask about it.

Went to my first Shoot Out yesterday, in downtown Los Angles, after hitting the TRW swap meet. It was a blast to meet all the different people. Got to exchange ideas and look each others vehicles over. Went with a good friend Steve, we were the only white guys there for a couple of hours or so, but were treated with respect, and everyone was pretty friendly. There was more Chevy Suburbans and Vans there than in Saudi during the war.

I never saw so many Leech Neville Alternators in my life. Everyone had a different way of mounting them, and wiring them. Also saw many external rectifiers with the three phase wiring being feed into the rectifiers. The rectifiers had large fans mounted just over them. Steve is a master machinist who installs blowers on high performance cars, and is a big time CB Radio nut. Steve makes up a machined spacer that allows another serpintine pulley to be installed on GM crank shaft pulley's. They didn't last long. He also makes a alternator pulley that has two serpintine belt splines on it.

The really bad news thing I saw there was a 64 pill Pirate amp. This thing was installed in the back of a Suburban and looked like a very large gas tank. The engine compartment had 4 each Leech Neville Alternators with several runs of ought 0/2 gage wire. The owners says "Just ah little thing ta talk on"

I showed a few of the guys my photos of the latest Proto-Type New Design 5/8 Base Antenna, one guy wanted to run it in a competition.

Everyone had a great time. Everyone was friendly and the BBQ was another great feather. Many showed and traded items bought from the TRW swap meet, and other swap meets were mentioned.

There are always a few who seem to do better that the rest, so they accuse them of cheating, right to his face, and the argument after that was priceless.

One thing I don't understand is all the antennas used in the competition had a coil in the middle. A lot of the antennas were home made, and even saw one made by Star Gun Antennas, it looked the best. Whats the deal on the coils in the antennas?

We made a lot of new friends, and enjoyed the all the friendly people, and goings on. One of the gentleman said in a heated argument over who's who in the competition ranking, "We'll whoop em with technology" Everyone had a good laugh. Truer words were not spoken.

I told them "I'll be back"

Hi Rich

Its quite ironic really, because I think that I read somewhere
that the Voyager space probe which is still transmitting back to
earth from over a billion miles away is only using a 20 watt
transmitter and we dont seem to have much trouble picking up its
signal

Regards, Mickey

I agree. I used to solder the braid until a customer brought in a cable he wanted to replace. When I removed one of the connectors, I found it assembled like you said. I mentioned this to the customer and he said it worked better than any other way he had used. Since he was running 1500 watts or so in his van, I figured it must be a good way and have done coax connectors this way ever since. Never a complaint in over 15 years. Makes it much easier to replace connectors in a mobile installation.

There are no such "freeband" frequencies, all the frequencies outside of
the 40 channels allocated to the cb radio service are allocated to other
services. Those frequencies are not "free" for anyone who does not hold
an FCC license or permit for those frequencies to use.

You can think of it as the sequel to the Skywave. It attempts to solve one of the inherent problems with just about all amps(Skywave included) out there by increasing the overall efficiency(to around 80%) and being able to deliver 100W to the load. That means only about 25W goes into the heat sink instead of 45-65W from other brands. This equates to a quantum leap in overall reliability and greatly reduced current draw. As for copying... I don't think there is another amp out there like mine.

> hello professor, is this much anticipated beta version of the new

Hello Jerry: No reason to insult or flame ya, when you have just another way of doing something. This is what the ng is all about, ah.

I've seen this done before, and have had to remove the connector, clean it up, and solder it. The copper braid to connector, electrical connection had a intermittent connection, from corrosion, with the Nickel plated PL-259 connector, and the now green copper braid wire. This was from water and moisture getting into the connector from the 4 braid solder holes.

One reason I solder the all four holes in the PL-259, is to seal it against moisture, and another good reason is the soldering makes the two different metals into one. With a great electrical connection. If care is taken when putting the PL-259 over the adapter with the braid over the adapter, you will never have a braid wire get up into the center wire area, especially if you tin the braid as it is bent over the adapter, before installing the connector over the adapter. Practice makes it perfect. For the larger coaxes that don't use the adapter, I just trim the coax braid back approx. 1/16 inch from the shoulder of the dielectric, this will give you a slight extra distance for not shorting to the center pin. Also as you screw the PL-259 over the coax, the braid will slightly move back, increasing the distance from the braid to the center pin. Never had a shorted coax connector, but always check it before firin up the fire in the wire.

I can easily remove the worst soldered PL-259 connectors, with a good soldering iron, and a little practice. I have grinded down a special tip on a 100 watt soldering iron, that fits very neatly into and around the grove of the PL-259 braid solder valley. Or just a good 250 watt soldering gun works great.

I use the silver plated, Teflon insulator PL-259 connectors. And solder all four holes. If you are going to put up a antenna on a high tower, or just make a jumper, I want the braid soldered. No reason on blowing up a expensive finial or amp because of a bad connection in the coax. But the worst thing is having a antenna up in the heavens and have a intermittent connection.

Later, and 73's

Rich,
I take issue with several things you have said here... Some I agree with.

A zero bias bipolar transistor amp is a class C amp... period! It qualifies as a conduction angle of less than 180 degrees... the definition of class C!

As far as class C no good for AM or FM... absolute nonsense! AM and FM radio staions use class C amplifiers all the time(although they are tubes)!

You are correct about class C not being able to be linear. While it's true that if you monitor the collector of the device... you will see the wave is distorted... this can... and is... cleaned up by the output tank circuitry! It's done all the time! The output of my prototype is for all practical purposes a pure sine wave!

You are also right about this not being a technical breakthrough... tuned input - tuned output class C amps have been around for a long time. However, they have really never been utilized on the CB... partially because they are more difficult to design than wideband transformer types. But they have significant advantages in efficiency!!!!

The deeper you go into class C... the more drive you need to break over the
negative barrier!
Amps that conduct for 120 degrees will work fine for AM providing you have
adequate drive available to get over the negative barrier and you have a
high enough Q output circuit to clean up the wave. It's done all the time...

Well I swapped mic elements and the muffle is
still there. Something appears to be wrong with
the audio pre-amp I would guess. I know that
sometimes RF in the wrong place can cause
this. I sent a note to Cobra asking if there was
a service bulletin regarding this problem.

I doubt that my unit is the first one to experience
this problem!

-thanks,
-c.d.t.

Yep:

Looking for a Motorola Mocat SSB Mobile Radio, can be dead or alive.

Prefere one that is Unmodified, and original, but will consider all others as well.

So if you have one of these collecting dust, I have a need for one to complete a collection.

please take a few moments and email me with what you have. I have a Major warehouse of Motorola Two-Way equipment if you are interested in anykind of trading.....

Monty

JVillafane,
You may not have looked hard enough. Try looking for
information on 'phased vertical' antennas. They do provide
gain, but in a mobile thats not traveling in a straight
line all the time, are you going to try to 'point' it? I
don't think it's really worthwhile. Since most CB phased
verticals are not spaced correctly to take advangae of 'gain'
possible with phased verticals, they are not directional
anyway. Save your money.....

Greetings!

On Sun, 30 Apr 2000 09:26:41 -0700, while the modem was pondering it's navel, mickey <mickeyNOmiSPAM@mickeys.co.uk.invalid> dissertated the following:

>I was reading some of the information on keydown competitions
>with great interest; one thing that everyone seems to be
>blissfully unaware is the possible health and safety
>implications when generating such awesome amounts of power. I
>think one of the articles refers to 70000 watts that caused
>camcorders to eject and the air to turn hazy

You might want to remove metal objects and jewelry that are attached to areas of the body that are sensitive to heat. RF heating does occur, and so does coronal arcing.

As the term goes...

"You know your Linear is work when...
...Fashion jewelry being worn by people around you
starts arcing when you key up..."

ATM/Credit Card/anything using a magnetic strip, or use transponder chips for restricted security access, have failed or been wiped clean even caused burns, when they've been overexposed to excessive RF at low frequencies, ranging from just above DC, to within the VHF band.

In some cases, severe exposure and heating has killed persons exposed accidentally to the high levels of VHF-RF power present while attempting to repair equipment that was not shut down. Electrocutions do occur due to simply not turning off the power before touching it.

>I was just curious if anyone could state how safe or otherwise
>is it to be exposed to this sort of RF power for any length of
>time?

The ARRL has some RF exposure guidelines, and have imposed restrictions on just how much RF power in the VHF band and above you should expose persons to while transmitting.

Although long-term effects are still not fully understood, this stems from the concerns raised over the use of UHF/EHF frequencies found in Cellular Phone bands.

Repeated research attempts to cite something does occur. But at to what level is considered safe ranges from virtually nil [no exposure]

to about 4 watts/meter of exposure is acceptable. These figures are based on 900+MHz.

Evidence showing safe exposure to higher wattage levels expotentially increases as the frequencies are reduced to below 50 MHz and there is enough evidence to state that repeated long exposure to HF and lower frequencies has not been considered harmful except to other electronic devices that can fail, being exposed to it.

The FCC and the ARRL have this information available on their respective websites, and also list their sources of the information and studies that have concluded this type of exposure requires some control.

At 27MHz, and the typical CB, you are exposed to very low levels of RF and it's long term culminated effects have never been fully discerned.

It long term effects are simply not known to, or if it can, accrue and cause health problems.

Mysterious illnesses have magically appeared when someone has been exposed to high levels of EMF like an EMP from a faulty transformer failing or a transmitter tube not properly neutralized and arcs. But an EMP contains a wide range of frequencies including those can can cause harm.

When running excessive power, the person within the 'Faraday' cage of the counterpoise, as if they were in a mobile or some other shielded enclosure, is more protected than the persons standing outside this protective shielding.

A secondary concern would be from harmonics any RF device can generate as part of internal parasitic oscillation, Intermediate frequency generation and multiplication and amplificaion, or failure to properly tune or load the device while transmitting, or reduce harmonic output thru lack of filtering. These harmonics can extend above the HF band and into regions of the spectrum that minor exposure may not be lethal, but continuous exposure may accumulate and cause health problems later on.

You may wind up getting exposed to the materials used to make these devices work that are highly toxic. I'm referring to the Arsenic, Mercury, Lead, Gallium, Boron [Bromine], Phospates and other basic and complex elements present and typical PCB-based materials that normally are not present as a vapor when the device is in operation, but when it fails, you might.

You may have to worry more about reducing your exposure to the materials used in the box, than what is produced out of the box under normal operation...

...If everything was put together properly.

Let's elaborate on this a little...
While it's true that certain frequencies, mostly above 800MHz such as radar/microwave have greater "heating" effects on human tissues... it has not been decisively shown that being exposed to extremely high field strengths at 27MHz are not harmful. My opinoin is that they are. There are many others and experts that feel the same. Just using common sense tells you it's probably not the best to be exposed to high levels of any RF...

I would use caution after receiving this amp and attempting to revive it...
Look over the inside carfully and try to determine what caused all these
transistors to be destroyed in the first place before replacing them and
sparking it up!
Hint - Concentrate you visual inspection on the output combiners and
"ghosting" resistors attached to them...

The problem described here mainly originates at the channel selector switch. All radios that have had a large amount of channel switching in their lives are susceptable to this problem. The fact is... the contacts on the rotary switch just wear out or become filthy. Replace the channel selector rotory switch and walla... problem solved!

Since the radio described here was virtually new... the channel selector switch must be a candidate for "infancy failure" due to a manufacturing defect.

With all due respect Prof, no AM transmitter I ever worked on was Class C UNLESS the modulation was applied to the final, not amplified by it. FM was, of course, Class C (real Class C, not fiddled Class B) to get the efficiency Real Class C offers. Where the input signal is unvarying in amplitude, Class C works admirably so long as the tank is sufficiently large to store enough energy to fill in the voids -- the flywheel or flyback effect familiar to every TV tech -- and provision is made for the inevitable harmonics that Class C generates as Fourier Analysis predicts. With the exception of some stations that for reasons of cost used two FM transmitters 135 degrees out of phase to produce AM (sounds impossible but is an ancient approach that might make sense on CB if one is Ancient Mary simple) all used hi-level modulation applied to a Class C amp doing steady carrier only. No one used an amplifier on an existing AM signal.

> purposes a pure sine wave!

The other part of the signal can be -- in fact has to be in anything other than Class A -- filled in by the tank. Nothing new or particularly startling in that. I have no doubt that a decent design will do that. Unfortunately, any amplitude variation will be distorted simply because it never existed.

> significant advantages in efficiency!!!!

If you were actually running Real Class C (and not attempting to run a modulated signal thru it) you might be right about efficiency. But you are running Fiddled Class B and will have efficiency to match. If you can take the distortion, no problem. But all you are really gaining is the price of a decent biasing network. What you are doing is reminiscent of the line in Swan/Sillytronics owners manuals: Six db of flattopping never hurt anyone.

I think you have simply fallen into a semantic bear-trap. By definition, Class C is current draw on less than 180 degrees so your 175 or so draw is semantically Class C. Real Class C is usually on the order of 120 degrees, sometimes up to 140 if you don't have the drive available. Semantic Class C does not get you the efficiency of Real Class C. Prof, you are running a cheesy Class B -- get used to it.
